

WEBEQUIE SUPPLY ROAD PROJECT

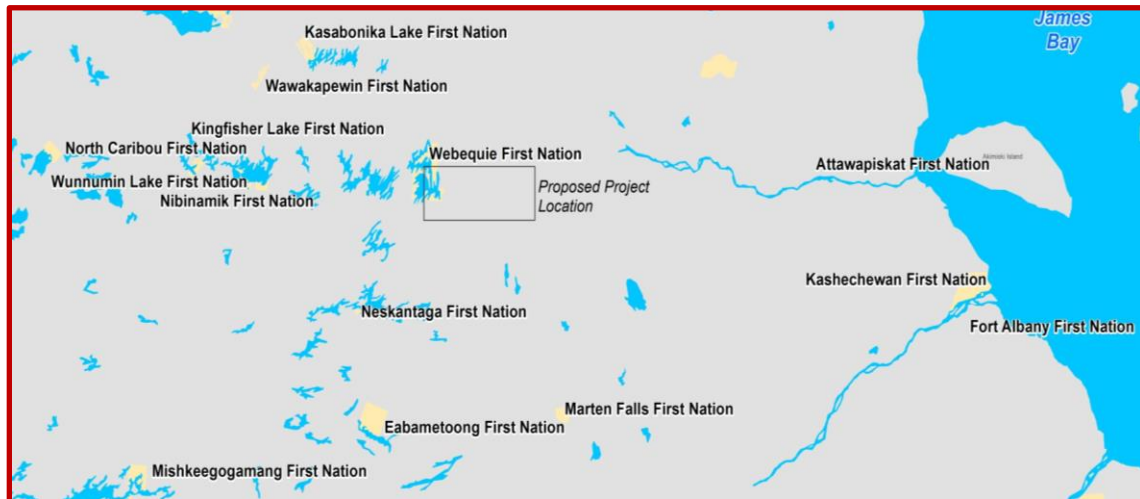

ENVIRONMENTAL ASSESSMENT AND PRELIMINARY ENGINEERING STUDY

FACT SHEET

What is this Project about?

This project is a Webequie First Nation-led environmental assessment and preliminary engineering study of a proposed all-season road connecting Webequie airport with the existing mineral exploration activities and proposed mine developments in the McFaulds Lake area. The purpose of the road would be to move materials, supplies and people between Webequie Airport and the mining-related activities in the McFaulds Lake area.

Where is the Project located?

How will communities be engaged?

The study includes community engagement during the Environmental Assessment (EA) Terms of Reference (ToR) and EA stages of the project. Community engagement will include interviews, small group sessions and workshops with community members to talk about road location alternatives, areas of importance to the communities being consulted, and studies being undertaken.

The Terms of Reference Road Map

The Terms of Reference (ToR) describes how the EA will be prepared, what will be studied, and how Indigenous communities, the public, and government will be consulted during the EA.

Once the Terms of Reference is approved, then the EA activities will follow the framework outlined in the Terms of Reference.
