WSR WEBEQUIE SUPPLY ROAD

WEBEQUIE FIRST NATION

APPENDIX P2.I.1

Correspondence with Indigenous Communities and Groups – Webequie First Nation

Webequie Supply Road Project Consultation Log

Records Found: 1

Webequie First Nation — First Nation Community

Contact Date: Oct 29, 2021 16:30 Method: E-mail
Topics to be Discussed: Notice of Commencement of Environmental Assessment
Don Parkinson of SNC Lavalin Inc (SNC) emailed the Notice of Commencement of Environmental Assessment (EA) for the Webequie Supply Road (WSR) Project to all stakeholders including the public, Indigenous communities, agencies and other interested parties. The email informed the stakeholders that the Terms of Reference (ToR) with amendments for the WSR EA Study was approved by the Minister of the Environment, Conservation and Parks (MECP) on October 8th, 2021. The email also informed them that the approved ToR and Notice of Approval can be accessed on the project website. It further encouraged participation in future consultations.
Attached File: SNC-Public Notice of Commencement of EA-2021-10-21.pdf

Contact Date: Nov 10, 2021 14:00 Method: Indigenous Community Meeting
Topics to be Discussed: EA Process, Geology, Terrain, Soils, Vegetation, Groundwater & Surface Water, and Aquatic Habitat
Melanie LaForest of Indigenous Community Engagement (ICE) and Don Parkinson and Angela Brooks of SNC-Lavalin (SNC) held a meeting with Webequie First Nation (WFN) community members on November 10, 2021 at the Webequie First Nation Community Centre. Approximately 25 to 30 Webequie First Nation community members attended the community meeting. The purpose of this meeting was to share information on the Webequie Supply Road (WSR) Project Environmental Assessment (EA) process and give a presentation on WSR Project: Geology, Terrain, Soils, Vegetation, Groundwater & Surface Water, and Aquatic Habitat work plans along with a question and answer period. A WFN community member provided a translation of the information in Ojibway in real-time. The Project Team followed COVID-19 protocols.

Questions and feedback from the community were related to: (1) land use and road construction; (2) incorporating traditional knowledge; (3) climate change; and (4) baseline studies.

Contact Date: Nov 22, 2021 14:48 Method: Fax
Topics to be Discussed: Terms of Reference, Live stream: Caribou and Wolverine, Wildlife and Wildlife Habitat, Species at Risk and Breeding Birds
Melanie Laforest and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team faxed a letter and poster, to Webequie First Nation's (WFN) Chief Cornelius Wabasse, advising that the WSR Project Team is hosting a live stream show and Wawatay radio session on November 23, 2021 with a livestream from 4:00-4:30pm EST and Wawatay Radio call-in show from 2:00-3:00pm EST, with access links and the toll-free call-in phone number. The sessions will include a presentation on topics including: Caribou and Wolverine, Wildlife and Wildlife Habitat, Species at Risk and Breeding Birds Work Plans along with question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations, Michael's email and cell phone contact information if WFN has any questions or comments.

Topics to be Discussed: Indigenous Knowledge / Indigenous Land and Resource Use Program
Brianna Patrick and Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an e-mail to Webequie First Nation's (WFN) Chief Cornelius Wabasse, with an attached package that included a letter, map, and Information Sharing Agreement. The letter advised that the WSR Project Team are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program and inquired whether WFN would be interested in participating in the Program. The letter included information about the IKLRU Program purpose, phases and guiding principles. The letter noted the importance of the protection and confidentiality of information collected and used in the IKLRU Program and indicated that a draft Information Sharing Agreement was included in the package, which outlined how confidential and sensitive information would be utilized in the WSR Project's environmental assessment and design process. A map of the Preliminary Study Areas for Indigenous Peoples Land Use and Interests was also included in the package. The letter asked WFN to confirm their interest in participating in the Program by January 27, 2022. Brianna and Michael provided their email and cell phone contact information if WFN has any questions.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Marian Tibor-McMahon and Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a fax, to Webequie First Nation's (WFN) Chief Cornelius Wabasse, which included a letter and map of the WSR Socio-Economic Study Areas. The letter stated that a key component of the EA/IA process is collecting socio-economic information within the Project study area, and as a result, the WSR Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered. It included information about what information the socio-economic program will gather, what the study area is, and detailed the components of the program. The letter invited WFN to participate in the WSR socio-economic primary data collection program. The letter asked WFN to confirm their interest in participating in the program by February 3, 2022. Marian provided her email and cell phone contact information if WFN has any questions.

Topics to be Discussed: Virtual Information Session
Michael Fox of Indigenous and Community Engagement (ICE) and Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session for Webequie First Nation (WFN) on April 4, 2022. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, Don played a video presentation which included information on WSR's Environmental Assessment / Impact Assessment activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. After the video presentation, Michael and Don discussed several questions that had been previously asked by WFN. During the live question and answer period, a participant asked what watersheds are and what they look like. The WSR Project Team had a platform which provided real time translation of the session in Cree to accommodate community members. There were no community members in attendance. The Project Team informed the audience that a recording of the session is made available through YouTube and the WSR Website for viewing.

Contact Date: Jun 20, 2022 14:00 Method: Chief & Council Meeting
Topics to be Discussed: Socio-Economics, Human Health, Indigenous Knowledge
Michael Fox, Marian Tibor-McMahon and Stephanie Creighton of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team held a meeting with Webequie First Nation's (WFN) Chief and Council to discuss the WSR Socio-Economic Primary Data Collection Program, Country Foods and Human Health surveys, the Human Health Impact Assessment, and the Indigenous Knowledge/Indigenous Land and Resource Use (IKLRU) Program. Discussions regarding the Socio-Economic Program included identifying participants for the focus groups and potential ways to distribute and conduct the Country Foods and Human Health surveys. Discussions regarding the Human Health Impact Assessment included having a health committee review the survey, the impact that health discussions might have on youth, the health scope produced by Intrinsik Corporation and their role in the assessment, and the potential for having Councillors lead the health portfolio. Discussions regarding the IKLRU Program included information about the Program, the need for a committee to be established, and the potential to collaborate with WFN's Caribou Program. Additional items discussed at the meeting were regarding WFN's community festival, the Matawa Annual General Meeting, treaty days arrangements, and the documentary being produced by TheyMedia on WFN and Marten Falls First Nation.

McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a fax, to Webequie First Nation's (WFN) Chief Cornelius Wabasse, which included a letter and poster advising that the WSR Project Team is hosting a Wawatay radio session from 11:00-12:00pm EST and livestream from 1:00-1:30pm EST on October 25, 2022. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on baseline field studies - preliminary observations related to wolverine, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. Michael's email and cell phone contact information was provided if WFN has any questions or comments.

The fax also included the English WSR Newsletter – Issue 15 which provided information about the Environmental Effects Assessment and highlighted the importance of the Baseline Field Studies in the Environmental Assessment / Impact Assessment. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael, Don Parkinson of SNC-Lavalin, and Leslie Spence the WSR Local Coordinator provided their e-mail address and phone number if WFN has any questions or comments.

Topics to be Discussed: Human Health Impact Assessment Study
Marian Tibor-McMahon of Indigenous and Community Engagement (ICE) on behalf of the Webequie Supply Road (WSR) Project team had a virtual meeting with Tyler Shewaybick and Selena Wabasse of Webequie First Nation (WFN). The purpose of the meeting was to discuss the Health Impact Assessment study. Marian provided an overview of the purpose of the study and the information that the WSR team are seeking. Marian went over the list of engagement activities that the WSR team is looking to conduct with WFN to collect health information, including establishing a Health Steering Community, focus group sessions, interviews and surveys. The councilors suggested to host the health steering committee workshop at the end of November/early December 2022. The WSR team is looking to December 12, 2022 to conduct health engagement activities.

Topics to be Discussed: WSR Consultation Progress Report Round 1
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Webequie First Nation's (WFN) Chief Cornelius Wabasse which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 1. The USB contained files supporting Record of Consultation. The letter explained that the Consultation Progress Report summarizes the documents from Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. The report being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that Webequie First Nation is tentatively planning to conduct Consultation Round 2 for the Project from Winter 2023 to Summer 2023 and provided a list of topics and milestones which are proposed to be addressed as part of the engagement and consultation activities for Round 2. Michael's email and cell phone contact information was provided if WFN has any questions or comments.

Topics to be Discussed: IAAC WSR Extension Request
Ely Weisbrot of the Impact Assessment Agency of Canada (IAAC) sent an email to Chief Cornelius Wabasse of Webequie First Nation (WFN) with an attached letter from IAAC in response to WFN's request for an extension to the time limit to provide IAAC with the required information and studies for the impact assessment (IA) of the Webequie Supply Road Project. The email noted that an update will be placed on the Canada Impact Assessment Registry page which will notify participants in the IA process, including the Indigenous communities listed in the Indigenous Engagement and Partnership Plan.

The letter addressed to Chief Cornelius Wabasse from Eric Landry of IAAC, indicated that IAAC determined that it will extend the time limit to provide the required information or studies for the IA of the WSR Project. IAAC noted that: (1) the Proponent has demonstrated progress in the development of the required information and studies and have a realistic work plan to complete all work; (2) the COVID-19 pandemic and resulting response measures affected the Proponent's ability to meet the time limit and; (3) the extended time limit would allow for continued coordination with the province and help manage consultation fatigue among the Indigenous communities. The letter explained that IAAC has determined that no additional new information is required to conduct the IA. The letter indicated that WFN is also expected to meet requirements set out in the Tailored Impact Statement Guidelines for the Project in relation to engagement with other Indigenous communities, as necessary, to inform the content of the Impact Statement, including the effects assessment and details on potential impacts on the exercise of Aboriginal and Treaty Rights of the communities listed in the Indigenous Engagement and Partnership Plan for the Project. Furthermore, IAAC requires that all comments provided by the federal review team, including those provided on the study plans and work plans, as well as the concerns expressed by Indigenous communities and members of the public, be fully addressed in the Impact Statement. The deadline to provide the Agency with the information and studies required for the IA of the Project is now January 6, 2027. If the required information and studies are not provided within the extended time limit that has been granted, the IA for the Project would be terminated in accordance with subsection 20(1) of the IAA. The letter explained that a notice informing the public of the new time limit will be posted to the Canadian Impact Assessment Registry and provided the phone number and email of Anjala Puvananathan, Regional Director for the Ontario Region at IAAC.

Topics to be Discussed: ATRI Forum Invitation
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Cornelius Wabasse of Webequie First Nation (WFN) with an attached invitation for the Aboriginal and Treaty Rights and Interests (ATRI) Forum hosted by the Province of Ontario in Thunder Bay on February 8 & 9, 2023. The poster explained that the 2-day forum will focus on discussing potential impacts to Northern Indigenous Communities ATRI as they relate to the WSR, Northern Road Link (NRL), and Marten Falls First Nation Community Access Road (MFCAR) Projects. The poster provided more information on how community representatives can attend, the purpose of the forum, who should attend from each community, and an email address for the community to RSVP. A preliminary agenda was also included on the poster. The Province of Ontario, Michael Fox of WSR, Andrea Nokleby of MFCAR, and Mishal Neesar of NRL provided their emails on the poster for further information if WFN has any questions or comments.

Topics to be Discussed: ATRI Forum Invitation Follow Up
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Cornelius Wabasse of Webequie First Nation (WFN) to follow up on the invitation for the Aboriginal and Treaty Rights and Interests (ATRI) Forum hosted by the Province of Ontario in Thunder Bay on February 8 & 9, 2023. The email explained that it is not too late to RSVP for the event. Attached to the email was the poster which explained that the 2-day forum will focus on discussing potential impacts to Northern Indigenous Communities ATRI as they relate to the WSR, Northern Road Link (NRL), and Marten Falls First Nation Community Access Road (MFCAR) Projects. The poster provided more information on how community representatives can attend, the purpose of the forum, who should attend from each community, and an email address for the community to RSVP. A preliminary agenda was also included on the poster. The Province of Ontario, Michael Fox of WSR, Andrea Nokleby of MFCAR, and Mishal Naseer of NRL provided their emails on the poster for further information if WFN has any questions or comments.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Webequie First Nation (WFN) on March 13, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, Don played a video presentation which included a testimony by the WFN Chief Wabasse and information on WSR's Environmental Assessment / Impact Assessment (EA / IA) activities including alternative assessment methodology and results, valued components, preferred alternative and consultation approach and next steps. After the video presentation, Don discussed several concerns that had been previously raised by WFN. These questions were regarding the cumulative effects of multiple projects, impacts on safety and drug abuse in relation to road. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community members. The Project Team informed the audience that a recording of the session is made available through YouTube and the WSR Website for viewing. The team also informed the audience of the upcoming radio and livestreaming events the following day. There were no community members in attendance.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Webequie First Nation (WFN)'s Chief Cornelius Wabasse, with a letter inviting the community's participation in the Socio-Economic Primary Data Collection Program as part of the WSR Environmental Assessment/Impact Assessment (EA/IA). The letter was a follow-up to the letter sent on December 20, 2021, which outlined the purpose of the socio-economic study, types of information that the Project team wants to gather, and suggested primary data collection methods. The letter explained that the Project team has a timeframe for the EA/IA process to complete the studies and document the results, and the goal for the year is to complete a Draft Socio-Economic Existing Conditions Report. The letter explained that the Project team would like to collaborate with the community to discuss and collect socio-economic information and/or verify information gathered to-date based on current research to help understand existing social and economic conditions. The letter provided an overview of the preliminary Valued Components for the EA/IA to represent aspects of social and economic conditions that are important to the community which require information gathering. The letter requested an indication of WFN's interest in participating in the Socio-Economic Primary Data Collection Program by April 17, 2023, because it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by June 16, 2023.

Topics to be Discussed: Interview Request
Samson Jacob of Webequie First Nation (WFN) sent an email to Chief Cornelius Wabasse of WFN and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team was copied on the email. Samson explained that they had a request from a high school who wants to do an interview about the potential mine development, the Ring of Fire, and reflecting Indigenous prospective. Samson asked the Project team to advise on what to do next.

15:37
Gordon Wabasse of WFN responded by asking if there is verification of the work by a teacher or principal and how the research is going to be shared with WFN. Gordon explained that it is good to talk with other nations about the Ring of Fire. Gordon also suggested answering the questions with members at a community meeting.

Topics to be Discussed: WFN Newsletter Issue 8
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a fax to Webequie First Nation's (WFN) Chief Cornelius Wabasse with a copy of the English WFN WSR Newsletter – Issue 8. The newsletter provided information about the virtual community information sessions for Round 2, the WSR Project Team community visit from February to collect Socio-Economic information, and the upcoming tentative community visit in April 2023 to conduct human health engagement. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael, Don Parkinson of SNC-Lavalin, and Leslie Spence the WSR Local Coordinator provided their e-mail address and phone number if WFN has any questions or comments.

Topics to be Discussed: WSR Newsletter 21, Radio, Livestream
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent an email to Webequie Nation (WFN)'s Chief Cornelius Wabasse which included a letter, and poster advising that the WSR Project Team is hosting a Wawatay radio session from 12:00pm-1:00pm EST and livestream from 2:00pm-2:30pm EST on April 12, 2023. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on Evaluation of Alternative Road Corridors, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if WFN has any questions or comments.

The email also included the English WSR Newsletter - Issue 21 which provided information about the Human Health Study, Country Foods Assessment, and the livestream and radio schedule for April 2023. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael, Don Parkinson of SNC-Lavalin, and Leslie Spence the WSR Local Coordinator provided their email address and phone number if WFN has any questions or comments.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Webequie First Nation (WFN)'s Chief Cornelius Wabasse as a follow up to the email sent on March 17, 2023 regarding the invitation to participate in the Socio-Economic Primary Data Collection Program as part of the Environmental Assessment / Impact Assessment. Heather asked the Chief if they had any questions regarding the original email and letter and indicated that the WSR Project team would like to hear back by April 17, 2023 as to WFN's interest in participating in the program. The letter detailed the purpose of the socio-economic study, the type of information that the WSR Project team is seeking, the study area, how information will be collected, schedule, and next steps. Heather requested the Chief to let the WSR Project team know if they prefer a call to discuss the request in the letter.

Topics to be Discussed: Health Visit
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Leslie Spence, Glen Wabasse, and Leon Shewaybick of Webequie First Nation (WFN) to inquire about their availability for a meeting to discuss the WSR Project team's visit to WFN to conduct engagement activities for the Human Health study.

11:34
Glen Wabasse of WFN responded to the email indicating that he might be available. Glen indicated that WFN leadership designated the Annual Spring Hunt Break to be from April 17-28, 2023 which applies to the staff and community of WFN. Glen indicated that he secured 2 rooms at the motel when Marian Tibor-McMahon of ICE was still coordinating the trip. Glen indicated that more rooms may become available before May 11 and 12, 2023. Glen explained that the trailer camp has 31 single rooms available. Glen provided the contact information for Cecilia Brenton, who is in charge of motel and trailer camp bookings.

11:51
Heather thanked Glen for the information.

Topics to be Discussed: WFN Community Visit
Glen Wabasse, Economic Development Officer of Webequie First Nation (WFN) sent an email to Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team, and Faiza Waheed of Intrinsik, with the contact information of individuals for the WSR Project Team to consider for interviews during the community visit. The individuals were workers for WFN's Home Community Care Program, Family Well-Being Program, Choose Life Program, recreational activities program, and school.

Contact Date: Apr 20, 2023 12:20 Method: E-mail
Topics to be Discussed: WFN Community Visit
Glen Wabasse, Economic Devleopment Officer of Webequie First Nation (WFN) sent an email to Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team with an update regarding options for the venue for the WSR Project Team's visit to WFN.

12:23
Heather Swan responded to the email requesting Glen to let the WSR Project Team know which venue is confirmed, after which new updated posters will be sent for Glen to put up in the community.

16:23
Glen Wabasse sent an email to Heather Swan and Stephanie Creighton of ICE indicating that the Youth Centre is confirmed for May 11 and 12, 2023.

Contact Date: Apr 21, 2023 06:08 Method: E-mail
Topics to be Discussed: WFN Community Visit
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Glen Wabasse of Webequie First Nation (WFN) in response to the email sent on April 20, 2023 regarding community contacts for the WSR Project Team to contact for interviews. Heather asked Glen if he could provide an email address for the school principal.

11:17
Glen responded to the email indicating that he did not have the Principal's email address and that Leslie Spence of WFN may have the Principal's email from conducting an interview with them.

11:19
Heather thanked Glen for the information.

11:25
Glen sent an email to Heather with a potential email address for the school principal, but indicated that Leslie Spence of WFN would confirm.

11:27
Heather thanked Glen for the information.

11:28
Heather forwarded the email chain to Leslie Spence of WFN, asking him to confirm if the email address for the Principal was correct.

Topics to be Discussed: WFN Community Visit
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Mary Gardiner, the school principal in Webequie First Nation (WFN) an email indicating that ICE is working for WFN to deliver the WSR Environmental Assessment and are trying to understand how this may impact the health of community members. Heather explained that the WSR Project Team has already been in the community to do focus groups and will be coming back to WFN on May 11 and 12, 2023. Heather asked Mary if there was any contacts at the school such as an Education Support worker who could speak with the WSR Project team to understand the needs of the youth. Heather explained that the WSR Project team will be meeting directly with some of the youth. Heather asked Mary if she or any of her staff would have time to meet with the WSR Project team on May 11 or 12 while the team is in WFN.

06:31
Mary responded to the email indicating that it will be engaging for staff and students to contribute to the conversation. Mary explained that that WSR Project team could visit the school in the afternoon on May 11, 2023, to do classroom visitations and arrange to meet staff at 3:30pm.

06:35
Heather thanked Mary and explained that she would confirm with the WSR Project Team who would be attending the school.

Topics to be Discussed: WFN Interview Transcripts
Faiza Waheed of Intrinsik and the Webequie Supply Road (WSR) Project Team sent an email to a community member of Webequie First Nation (WFN) that was interviewed by the WSR Project Team in December 2022 for the Health Impact Assessment for the WSR Project. The email indicated that the Project Team acquired the individual's email with the help of Glen Wabasse of WFN. Attached to the email was the interview transcripts for the individual to review, validate, and add any missed conversation points. The email also indicated that the individual's name will not be attached to any comments received in the interview and that the individual's privacy is important to the Project Team.

Topics to be Discussed: WSR Newsletter - Issue 22
Michael Fox, McKenna Baxter and Brianna Patrick of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Webequie First Nation's (WFN) Chief Cornelius Wabasse of the English WSR Newsletter – Issue 22. The newsletter provided information about the Socio-Economic Primary Data Collection Program, the Indigenous Knowledge and Land Resource Use Program, and the livestream and radio schedule for May 2023. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael, Don Parkinson of SNC-Lavalin, and Leslie Spence the WSR Local Coordinator provided their email address and phone number if WFN has any questions or comments.

Topics to be Discussed: Radio, Livestreams and Engagement Options
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent an email to Webequie First Nation (WFN)'s Chief Cornelius Wabasse which included a letter, and poster advising that the WSR Project Team is hosting a Wawatay radio session from 12:00pm-1:00pm EST and livestream from 2:00pm-2:30pm EST on May 24, 2023. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on the Evaluation of Alternatives for Supportive Infrastructure, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if WFN has any questions or comments.

Topics to be Discussed: Meeting with WEFN
Samson Jacob of Webequie First Nation (WFN) sent an email to Chief Cornelius Wabasse and council, Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team indicating that Weenusk First Nation (WEFN) requested a meeting with WFN regarding economic development and what WFN is doing as a community. The email indicated that under the land use plan, it is necessary for WFN to meet with neighboring communities, especially those who have a shared area to ensure diplomacy between the two First Nations. The email also indicated that WEFN wants to know about WFN's involvement on the WSR Environmental Assessment. Samson noted that WEFN has reached out to WFN with dates to meet between May 29 and June 2, 2023, where Chief Abraham Hunter will be present. The email noted that WFN has funds for a charter to send delegation to WEFN. WFN indicted that they would have a reply for WEFN by May 26, 2023.

19:54
Gordon Wabasse of WFN suggested a potential meeting date of June 7, 2023.

Contact Date: May 25, 2023 09:11 Method: E-mail
Topics to be Discussed: Meeting with WEFN
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team responded to the email from Samson Jacob and Gordon Wabasse of Webequie First Nation on May 24, 2023, regarding a potential meeting date with Weenusk First Nation on June 7, 2023. Michael confirmed that June 7, 2023, works for the WSR Project team and asked Samson to see if the date works for WEFN.

09:58
Chief Cornelius Wabasse of WFN responded indicating that June 7, 2023 works for them and indicated that it would be good to engage with Weenusk leadership and community.

12:54
Samson responded indicating that he would notify WEFN of WFN's and the WSR Project Team's availability.

Topics to be Discussed: Virtual Information Session Round 2 Part 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Webequie First Nation's (WFN) Chief Cornelius Wabasse, with a letter and poster advising that the WSR Project Team is hosting a virtual information session for WFN on May 29, 2023, between 12:00-1:00pm EST with registration links for the session. The information session will include a presentation on WSR's Environmental Assessment / Impact Assessment activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter also included information on the Virtual Reality (VR) Open House where community members can access further information about the project and provide comments. The letter indicated that the WSR Project Team is available for additional engagement sessions and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if WFN has any questions or comments.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Aroland First Nation (AFN) on May 29, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. The meeting began with a video of Chief Wabasse discussing the importance of the project to the Webequie Community. Don explained that the Part 2 of Consultation Round 2 will discuss the Project team's work on the evaluation of alternatives for supportive infrastructure which includes aggregate rock sources for pits and quarry access roads and construction camps. Don presented information on how various factors were evaluated to produce preferred options based on a lower score. Don also explained the various engineering structures such as culverts, bridges, access roads etc. in detail and shared graphics illustrating what the proposed structures would look like after completion. The WSR Project Team had a platform which provided a real-time translation of the session in Oji-Cree. No participants from AFN were in attendance. Don reiterated that the Project Team would like to hear from AFN community members and that a recording of the session would be made available through YouTube and the WSR Website.

Topics to be Discussed: WFN Interview Transcript
Faiza Waheed of Intrinsik and the Webequie Supply Road (WSR) Project team sent an email to a nurse of Webequie First Nation (WFN) regarding the interview conducted in December 2022 for the Health Impact Assessment for the WSR Project. Faiza apologized for the delayed email and noted that the team had trouble getting the individual's email address. Attached to the email was a transcript from the interview with the individual for review and correction. Faiza indicated that the individual's name will not be used next to anything that was said in the interview and that the comments will be kept anonymous. For any questions, Faiza provided her contact information.

Topics to be Discussed: ATRI Forum Follow Up
Andrea Nokleby of Dillon Consulting sent an email on behalf of Marten Falls First Nation Community Access Road (MFFN CAR), Webequie Supply Road (WSR), and Northern Road Link (NRL) Project Teams to thank Chief Cornelius Wabasse of Webequie First Nation (WFN) and representatives who attended the Aboriginal and Treaty Rights (ATRI) and Forum that was hosted in Thunder Bay on February 8th and 9th 2023. Michael Fox of Indigenous and Community Engagement (ICE) and the WSR Project team were copied on the email. The Forum focused on discussing potential impacts to Northern Indigenous communities' Aboriginal and/or Treaty Rights and Interests as they relate to the MFFN CAR, WSR and NRL projects. The email contained attachments with information including: (1) a thank you note to all participants; (2) a general summary of ATRI comments; and (3) community-specific summaries from the breakout sessions. The email indicated that any comments or questions about the attached information is welcomed and that representatives on the project teams would be happy to set up additional meetings to further discuss any aspects of the projects, including WFN's ATRI as they relate to each project. The email also indicated that each Project team would be following up separately on any project-specific correspondence.

Topics to be Discussed: Radio, Livestreams and Engagement Options
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent an email to Webequie First Nation (WFN)'s Chief Cornelius Wabasse which included a letter, and poster advising that the WSR Project Team is hosting a Wawatay radio session from 12:00pm-1:00pm EST and livestream from 2:00pm-2:30pm EST on July 5, 2023. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on construction camps, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 Part 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if WFN has any questions or comments.

Contact Date: Sep 25, 2023 09:00 Method: Open House
Topics to be Discussed: WFN Open House
Don Parkinson and Jennifer Ashawasegai-Pereira of AtkinsRealis and the Webequie Supply Road (WSR) Project Team conducted a community open house for members of Webequie First Nation at the community hall. A total of 34 Webequie First Nation community members attended the open house. The WSR Consultation Round 2 Part 2 presentation entitled Evaluation of Alternative Supporting Infrastructure and Road Design was delivered by Don Parkinson of AtkinsRealis and a question and answer period followed.

Information packages consisting of the presentation slides were made available to community members as handouts. Questions and comments about the Project were received from the membership and fielded by Don Parkinson. Comments received were consistent with previous engagement exercises and reflected below.

After the presentation to community members, a Indigenous Knowledge data collection exercise with a group of six community members in the age range of 40-55 was conducted. Maps of the project area were made available, and data was collected in the project study. Comments were made about the increasing trend of women accessing the land for hunting, fishing and other harvesting purposes. Community members expressed that relationships with neighbouring community members such as Nibinamik First Nation have been maintained but some concerns were mentioned about potential over-harvesting practices by some members of neighbouring communities.

Issues and concerns from community members were regarding aggregate resources, outside people access WFN traditional territory and potentially impacting fish and wildlife populations, training opportunities, increased access to drugs and alcohol, climate change, and community control over WSR road access.

Topics to be Discussed: Aboriginal and/or Treaty Rights and Interests Forum #2
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team was one of three hosts for the Aboriginal and/or Treaty Rights and Interests Forum held at the Valhalla Inn in Thunder Bay on November 21-23, 2023.

The purpose of the Forum was to create a respectful, culturally-sensitive, and collaborative space to develop and/or confirm understanding of the Project areas (WSR, MFCAR, and NRL) as communities Aboriginal and / or Treaty Rights and Interests (ATRI) may be impacted by these Projects. The purpose of this event was to discuss ATRI and not to collect Indigenous Knowledge. Day 3 of the Forum was set aside for a half-day discussion on Cumulative Effects as they relate to the Projects. Eligible Indigenous communities were invited to attend with 3 participants from each community being funded by the Province of Ontario.

Topics to be Discussed: WSR Information and Dinner Session for WFN Off-Reserve Members
The Webequie Supply Road (WSR) Project team hosted a dinner and information session for Webequie First Nation (WFN) Off-Reserve members at the Valhalla Inn in Thunder Bay, Ontario. Chief Cornelius Wabasse provided opening remarks and Jennifer Ashawasegai-Pereira of AtkinsRéalis provided a short presentation providing a Project update, followed by dinner. The presentation provided information on the purpose of the project, Consultation Round 2, alternative routes in the preferred corridor, the recommended preferred route, alternatives for supportive infrastructure, potential construction camp locations, alternative camp locations, potential aggregate sourcing areas, alternative aggregate source areas, road foundation design, watercourse crossings, and next steps. The presentation was also translated by Fred Jacob. Physical copies of the presentation were available to attendees at request. Throughout the event, WSR Project team members from Indigenous and Community Engagement (ICE) and AtkinsRéalis were available to answer any questions. The event was family-friendly and provided transportation to and from the event.

Topics to be Discussed: WFN Community Visit
The Webequie Supply Road (WSR) Project Team conducted a community project update meeting for members of Webequie First Nation (WFN) at community hall. A total of 35 WFN community members including Chief Cornelius Wabasse and members of the Council attended the community meeting. A WSR project update presentation was delivered by Don Parkinson of AtkinsRealis and a question and answer period followed. Particular emphasis was made on progress to date and upcoming activities as the project moves into the later stages of the environmental/impact assessment and advanced design stages. Questions and comments received reflected support for the Project and identified the importance of maintaining project momentum through the initiation of training opportunities and other preparatory activities as the project moves toward an eventual decision on the Environmental Assessment and advanced design.

Topics to be Discussed: WSR Consultation Progress Report Round 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Webequie First Nation's (WFN) Chief Cornelius Wabasse which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 2. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 2. The letter explained that the Consultation Progress Report summarizes the documents from Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025 and provided a list of topics and milestones which are proposed to be addressed as part of the engagement and consultation activities for Round 3. Michael's email and cell phone contact information was provided if WFN has any questions or comments.

Topics to be Discussed: Consultation Round 2 Report Follow Up, Livestream, Radio Show
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent email to Webequie First Nation's (WFN) Chief Cornelius Wabasse, with a letter and poster attached. The letter explained that the WSR Project team mailed a package containing the Consultation Progress Report for Round 2 (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter provided the status of delivery as of March 6, 2024. An overview of the Consultation Progress Report for Round 2 was provided and the letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on March 11, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on the results of the Caribou Study, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if WFN has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 3 Part 1
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a package via Canada Post to Webequie First Nation's (WFN) Chief Cornelius Wabasse, with a letter and poster advising that the WSR Project Team is hosting a virtual information session for WFN on May 6, 2024, from 12:00-12:45pm EST with registration links for the session. The information session will include a presentation on WSR's Environmental Assessment / Impact Assessment (EA/IA) activities including: project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter indicated that the WSR Project Team is available for additional engagement sessions and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if WFN has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 3 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 3 for Webequie First Nation (WFN) on May 6, 2024. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. The meeting began with a video of Chief Wabasse discussing the importance of the project to the Webequie Community. Don explained that the Part 1 of Consultation Round 3 will provide an overview of the Environmental Assessment/Impact Assessment (EA/IA), how the EA/IA will be carried out, and the preliminary results of effects assessment for select value components. Don provided an update on the engagement and consultation to date and provided an overview of the key themes of feedback from communities in Round 1 and 2. Don explained that the presentation provided in the session is a shorter version of the full presentation available on the WSR website. The WSR Project Team had a platform which provided a real-time translation of the session in Oji-Cree. No participants from WFN were in attendance. Don reiterated that the Project Team would like to hear from WFN community members and that a recording of the session would be made available through YouTube and the WSR Website.

Topics to be Discussed: Community Project Update and Validation of Socio-Economic and Health Existing Conditions Preliminary Results
Don Parkinson, Mark Knell, and Jennifer Ashawasegai-Pereira of AtkinsRéalis and of the Webequie Supply Road (WSR) Project team went to Webequie First Nation (WFN) to provide an update about the Project and talk to community members to request feedback on the Socio-Economic and Health Conditions of the community that have been assembled into the draft baseline study reports and circulated to community leadership. The Project Team also heard from community members about concerns and issues related to potential effects of the WSR Project on the community.

The Project Team hosted community meals and discussions at the WFN Band Hall over two days, where presentations by technical specialists were followed by Q & A sessions on the following topic areas: General update on the WSR Project presented by Jennifer Ashawasegai-Pereira and Samson Jacob of WFN,
Socio-economic existing conditions of WFN presented by Mark Knell, and Community health existing conditions of WFN presented by Faiza Waheed of Intrinsik. Community member and Elder Roy Spence, assisted by Bob Wabasse, provided opening prayer and pipe ceremony.

Additionally, breakout focus groups were held with participating community members to discuss in further detail the results with the community, including a group of Women and land users, and a group of Men and land users. Other focus groups were advertised for youth and two-spirit people but there were no attendees that participated. A focus group for Elders and individuals with disabilities was modified to allow for more open dialogue with all attendees in the community meeting. About 20 people attended sessions each day to hear updates and participate in focus groups.

Issues, comments, and concerns raised by community members covered the following topics: more visual communications updates, community specific studies, cumulative impacts, community engagement, community's involvement in decision making, baseline definition, housing concerns, high cost of living, lack of employment, community safety, mitigation measures, Indigenous Knowledge and way of life, gathering data through surveys, non-traditional healthcare systems and access to health services, availability of healthy food options, declining population, community infrastructure, impacts to environment, engagement events with health activities.

Items for follow up from the sessions included:
1) Project Team to develop plain language presentations, with images to enhance understanding
2) Re-work the population trajectory

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Carolina Montrose and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Leon Shewaybick and Harry Wabasse of Webequie First Nation with an attached invitation for the Three Road Project Gathering & Expo hosted by Webequie First Nation (WFN) and Marten Falls First Nation (MFFN), The invitation noted that the event was funded by the Province of Ontario, our Treaty Partner and that it would be held in Thunder Bay, ON June 11-13, 2024. The invitation also noted the need to continue the momentum of the last two gatherings which focused on Aboriginal and/or Treaty Rights and Interests. In addition, the invitation notes that the Gathering & Expo will provide participants with an engaging and interactive space for consultation to learn more about the projects, ask questions, and share feedback focusing on water, peatlands and building roads on peatlands. Day 1 will be specifically for an Elders gathering, providing a comfortable space for Elders to gather and discuss the Projects. The invitation provided funding information and an email address to access the funding.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team was one of three hosts for the Three Roads Projects Gathering & Expo (Gathering) held at the Superior Inn and Conference Centre in Thunder Bay on June 11-13, 2024.

The purpose of the Gathering was to create a respectful, and collaborative space for consultation to continue to build an understanding of the three road projects and their potential impacts by: 1) Providing a comfortable space for Elders to gather and discuss the Projects; 2) Creating opportunities to engage directly with the Project proponents and consulting teams sharing information about the Projects and; 3) Discussing the upcoming draft Environmental Assessment Report / Impact Statement (EAR/IS) Review Process for WSR and the Marten Falls Community Access Road (MFCAR) Project.

Day 1 was set aside exclusively as an Elders Gathering to gather and engage with the individual Project Teams for all three projects to share their perspectives. By design, there were no government representatives in attendance on Day 1; only Indigenous people and Indigenous consultants, to encourage a more open and comfortable discussion. This was a new and innovative approach to engaging with Indigenous communities by the creation of a sacred space that was authentic, comfortable and open.

Day 2 was open to all participants. The morning focused on a series of technical presentations on key issues identified in previous engagement and consultation opportunities (peatlands (and other terrain), building roads on peatlands, aspects of water and fish populations). The afternoon was an Expo where participants could visit a series of booths to have one-on-one conversations with Project Team members from each of the road projects, various technical aspects of the Projects, Ontario and the Impact Assessment Agency of Canada.

Day 3 was also open to all participants. This session was a half day workshop on a common approach to reviewing the upcoming circulation of draft EAR/ISs for two of the three road projects so that there would be sufficient time to review and provide feedback. Each project team wanted to share the common approach to reviewing the draft EAR/ISs with Indigenous Nations early so that there was a shared understanding of what to expect and when. This would allow Indigenous communities to prepare themselves in advance with respect to resources to assist in the review.

Eligible Indigenous communities were invited to attend with 3 participants from each community being funded by the province. A total of 44 individuals signed in for Day one of the gathering, A total of 62 individuals signed in for Day 2, and a total of 48 individuals signed in for Day 3, but please note that not all participants opted to sign in. In total 14 participants from Webequie First Nation attended the Gathering over the 3 days; Elder Roy Spence, Lands and Resources Director Gordon Wabasse, Deputy Chief Selena Wabasse, Councillor Tyler Shewaybick, Councillor Eric Shewaybick, Economic Development Manager Glen Wabasse, Elder/Translator Fred Jacob, Lands Resources Coordinator Samson Jacob, and 6 other Elders and community members.

Topics to be Discussed: Virtual Information Session Round 3 Part 2
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team held a virtual session as part of Consultation Round 3 for Webequie First Nation (WFN). An Oji Cree translator provided real-time translation of all meeting content. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 3 Part 2 presentation that began with a review of the project to date, followed by a discussion of preliminary results for the vegetation, wildlife, social environment, aboriginal and Treaty rights valued components. The presentation concluded with discussion on the cumulative effects assessment and the assessment of other aspects and effects. Participants were informed that the unabridged version of the presentation was available on the website and that this version reported preliminary results for several other valued components. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from WFN were in attendance.

Topics to be Discussed: WFN Indigenous Knowledge Validation Interviews and Community Information Session
Michael Fox of Indigenous and Community Engagement (ICE) and Colin Buchanan of Stantec, of the Webeque Supply Road (WSR) Project team went to Webequie First Nation (WFN) to hold Indigenous Knowledge (IK) validation interviews and community information sessions in the WFN Community Hall from August 20-22, 2024. The purpose of the meeting was to share information about the WSR Project, validate the IK data that has already been collected and collect additional GBA+ information. The sessions were attended by numerous community members, with sign-in sheets for each day. Focus groups consisted of Elders, Women, and Men and individual interviews also took place. Fred Jacob was the translator for the sessions. TheyMedia recorded, streamed, and provided translation devices for the sessions. Large, laminated maps were printed and available as tabletop tools for referencing. Google Earth was also used as a tool to identify locations. Communication materials were provided at the sessions and left at the Community Hall including: 20 hard copies of WSR Newsletter Issue 36 in English and Syllabics along with 20 Hard copies of the WSR IK Validation presentation in English and Syllabics. There was meant to be a community event to take place on the evening of August 21, 2024 for the youth, but it was cancelled by the facilitator due to other events taking place in Treaty 9 during that time. TheyMedia screened “Bridges to the North” Documentary in the community hall and served popcorn and drinks with two youth in attendance.

The Issues and concerns that were expressed during the IK validation focus groups and individual interviews covered the following topics: community participation and availability, traplines, environmental concerns, social issues, and monitoring.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Webequie First Nation's (WFN) Chief Cornelius Wabasse with a letter attached to the email regarding the planned early circulation of the draft Environmental Assessment Report / Impact Statement (EAR/IS). The letter advised that the Project team is planning an early circulation of the draft EAR/IS to provide the opportunity for WFN to review the draft EAR/IS prior to its release to stakeholders and the public for formal review. The letter explained that the team anticipates the draft EAR/IS to occur in late fall or early winter of the fiscal year 2024/2025 which will provide communities with an extended review period of 60-days to provide their review and comments. The letter explained that the team would follow up with the community as the project moves closer to the circulation of the draft EAR/IS, including the community would like to receive the document (electronic and/or hard copy). Michael provided his contact information for any questions or comments.

Topics to be Discussed: Consultation Progress Report Round 3
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Webequie First Nation’s (WFN) Chief Cornelius Wabasse which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 3. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 3. The letter explained that the Consultation Progress Report summarizes the documents from Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that next steps will involve engagement and consultation options for communities to review assessment findings in the draft Environmental Assessment Report / Impact Statement, including targeted sessions with Indigenous communities for feedback and input on the results of the cumulative effects assessment for the Project. The letter noted that the future engagement and consultation sessions for communities are tentatively scheduled to start in Winter 2024/2025. Michael's email and cell phone contact information was provided if WFN has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 4 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team conducted a virtual community meeting on the Zoom platform with Webequie First Nation. An Oji Cree translator provided real-time translation of all meeting content. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 4 Part 1 presentation that began with a review of the project to date, followed by a discussion of the process of effects assessment, then an explanation of cumulative effects and how they are determined and managed. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from WFN were in attendance.

Topics to be Discussed: WSR Christmas Dinner & Project Update for WFN Off-Reserve Members
The Webequie Supply Road (WSR) Project team hosted a dinner and information session for Webequie First Nation (WFN) Off-Reserve members at the Superior Inn in Thunder Bay, Ontario. A WFN member provided opening remarks and Don Parkinson of AtkinsRéalis provided a short presentation providing a Project update, followed by dinner. The presentation provided information on the purpose of the project, project description, other road projects in the area, the Project's relation to Federal Regional Assessment, engagement & consultation, what we have heard, where we are now, project effects, the draft EAR/IS, the IA approval process, and project timelines. The presentation was also translated by Fred Jacob. Physical copies of the presentation were available to attendees at request. Throughout the event, WSR Project team members from Indigenous and Community Engagement (ICE) and AtkinsRéalis were available to answer any questions. The event was family-friendly and provided transportation to and from the event. Approximately 75 community members were in attendance upon sign in. There were no questions during the session.

Topics to be Discussed: WFN Community Visit
The Webequie Supply Road Project Team hosted a community meeting in Webequie First Nation (WFN) to share a project update regarding the Webequie Supply Road (WSR) Project. The format of the meeting was a presentation by the Project Team followed by a question and answer period. The presentation was delivered by Don Parkinson, Senior Consultation Specialist, AtkinsRealis and consisted of a brief project description, followed by descriptions of the relationship between the environmental assessment (EA)/impact assessment (IA) and the federal regional assessment, consultation feedback received, the solicitation of feedback on Valued Components (VCs) to guide the EA report and Impact Statement (IS) review consultation process, the EA Report/IS review and decision-making process, and post-EA/IA activities. Indigenous and Community Engagement (ICE), President and CEO Michael Fox also explained the process and importance of selecting the most important Valued Components. Community members then engaged in an exercise to select the top three most important VCs. All community members present participated in the exercise. Communication materials were provided to community members for their information and reference including: a copy of the presentation, WSR Environmental/Impact Assessment Project update Webequie First Nation December 18, 2024. A total of 35 people were in attendance, 21 community members signed in. Tony McGuire, TheyMedia recorded the community session and Jennifer Ashawasegai, Senior Indigenous Engagement Specialist took notes and prepared summary.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Ian Frederickson and Michael Fox of Indigenous and Community Engagement (ICE) and the?Webequie?Supply Road (WSR) Project team sent an email to Chief Cornelius Wabasse of Webequie First Nation with links to?invitations for the Three Road Project Gathering & Expo hosted by Webequie?First Nation (WFN) and Marten Falls First Nation (MFFN) with support from the Province of Ontario. The email noted that the gathering will provide an engaging and interactive consultation space to discuss the WSR draft EAR/IS, Marten Falls Community Access Road draft EAR/IS, and Northern Road Link Projects. The invitation provided the dates and locations for the events in Thunder Bay and Timmins: February 19-20, 2025, at the Valhalla Inn Hotel in Thunder Bay, and February 25-26, 2025, at the Cedar Meadows & Spa in Timmins. A general summary of event highlights was provided along with information about funding and attendance. The invitation asked the community to RSVP by January 31, 2025, to the Province of Ontario's email address provided?to reserve accommodations. The invitation noted that the event aims to?foster an understanding of the three road projects and their potential impacts while creating a collaborative space for consultation. For further questions regarding funding inquiries or additional details, the Province of Ontario's email address was provided.?

Topics to be Discussed: Winter 2025 Field Notice
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) sent an email to Webequie First Nation's (WFN) Chief Cornelius Wabasse with a winter field notice attached. The field notice indicated that field work has been scheduled to take place from February 19-March 1st, 2025 to manually remove caribou GPS radio tracking collars. The notice indicated that the collars were placed on the caribou to gather data on their populations, migration patterns, and habitat use. Following three years of data collection, the collars were set to automatically release in February 2024, however not all collars released as intended. The notice explained that a specifically trained team will manually remove collars without harming the animal. The notice also provided information on what to expect and where the team may need to travel but noted that the field team may need to travel outside the study area boundaries. A map was provided on the second page of the notice.

Topics to be Discussed: Virtual Information Session Round 4 Part 2
The Webequie Supply Road (WSR) consultation team conducted a virtual community meeting on the Zoom platform with Webequie First Nation (WFN). The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 4 Part 2 presentation that began with a review of the project to date, followed by a discussion of the process of effects assessment. After the effects assessment discussion, potential effects and associated mitigation measures were explained using examples from geology, terrain and soils and fish and fish habitat. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from WFN were in attendance.

Topics to be Discussed: Virtual Information Session Round 4 Part 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a package via Canada Post to Webequie First Nation's (WFN) Chief Cornelius Wabasse, with a letter and poster advising that the WSR Project Team is hosting a virtual information session for Round 4 Part 2 for WFN on January 27, 2024, from 11:00-11:45am EST with registration links for the session. The information session will include the second presentation on WSR's Cumulative Effects Assessment. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter also included information on the Virtual Reality (VR) Open House where community members can access further information about the project and provide comments. The letter indicated that the WSR Project Team is available for additional engagement sessions and provided a list of engagement options. The letter also attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if WFN has any questions or comments.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Ian Frederickson and Michael Fox of Indigenous and Community Engagement (ICE) and the?Webequie?Supply Road (WSR) Project team sent an email to Chief Cornelius Wabasse of Webequie First Nation with links to?invitations for the Three Road Project Gathering & Expo hosted by Webequie?First Nation (WFN) and Marten Falls First Nation (MFFN) with support from the Province of Ontario. The email noted that the gathering will provide an engaging and interactive consultation space to discuss the WSR draft EAR/IS, Marten Falls Community Access Road draft EAR/IS, and Northern Road Link Projects. The invitation provided the dates and locations for the events in Thunder Bay and Timmins: February 19-20, 2025, at the Valhalla Inn Hotel in Thunder Bay, and February 25-26, 2025, at the Cedar Meadows & Spa in Timmins. A general summary of event highlights was provided along with information about funding and attendance. The invitation asked the community to RSVP by January 31, 2025, to the Province of Ontario's email address provided?to reserve accommodations. The invitation noted that the event aims to?foster an understanding of the three road projects and their potential impacts while creating a collaborative space for consultation. For further questions regarding funding inquiries or additional details, the Province of Ontario's email address was provided.?

Topics to be Discussed: Three Road Projects Gathering & Expo June 2024 Report
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team was one of three hosts for the Three Roads Projects Gathering & Expo (Gathering) held at the Valhalla Inn in Thunder Bay on February 19-20, 2025.

The purpose of the Gathering was to provide an engaging and interactive consultation space to discuss the Webequie Supply Road (WSR) Draft Environmental Assessment Report / Impact Statement (EAR/IS), Marten Falls Community Access Road (MFCAR) Draft EAR/IS and Northern Road Link (NRL) Projects.

Day 1 of the event was set aside for Project overviews, consultation panels, individual community breakout sessions, and project expo including information to assist with review of the draft EAR/IS for MFCAR and WSR and cumulative effects assessment.

Day 2 of the event covered the Aboriginal and/or Treaty Rights and Interests (ATRI) panel discussions, breakout sessions, and project expo including information to assist with review of the draft EAR/IS and MFCAR for WSR and cumulative effects assessment.

Eligible Indigenous communities were invited to attend with 3 participants from each community being funded by the province. A total of 28 individuals signed in for Day one of the gathering, A total of 38 individuals signed in for Day 2, but please note that not all participants opted to sign in. In total 6 participants from Webequie First Nation (WFN) attended the Gathering over the 2 days.

Topics to be Discussed: WFN Draft EAR/IS Release Community Visit
The Webequie Supply Road (WSR) Project team hosted a community meeting in Webequie First Nation (WFN) to share a project update regarding the WSR Project. The format of the meeting was a presentation by the Project Team followed by a question and answer period. The presentation was delivered by Michael Fox, Regional Consultation Lead for the WSR, President of Indigenous and Community Engagement (ICE), who explained that the draft Environmental Assessment / Impact Assessment (draft EAR/IS) is available for WFN to review. The WSR Project team provided a hard copy of the available sections of the draft EAR/IS for community members to review. Hard copies of Plain Language Summaries for each section of the draft EAR/IS were also available for community members. Michael explained that the draft EAR/IS is not yet complete and the team will be providing the draft EAR/IS sections and Plain Language Summaries as they are available. Michael also provided an overview of the alternatives, aggregates, construction camps, Provincial & Regulatory timelines, RFPs, Pre-construction activities, and framework roadmap. After the presentation, community members were given the opportunity to ask questions and provide comments. Two comments were received from the community members expressing concern about the Ring of Fire. Michael explained that the Project team's plan is to go to WFN to provide updates every month and the intent for the meeting is to show WFN the Draft EAR/IS, listen to concerns, and celebrate the release. Roy Spence of WFN provided translation for the presentation. A total of 29 community members signed in. Tony McGuire of TheyMedia, recorded the community session and streamed it on the Project website and on the Project Facebook page.

Topics to be Discussed: Aboriginal and/or Treaty Rights and Interests Validation
Christopher McKay of Indigenous and Community Engagement (ICE), Elizabeth Boyd and Hannah Saevil of Stantec, and the Webequie Supply Road (WSR) Project Team hosted Aboriginal and Treaty Rights and Interests (ATRI) validation sessions for Webequie First Nation members at the band hall from May 21-23, 2025. The team held sessions with 6 family groups to validate findings from the ATRI report. The information was validated through the report, maps and group discussions. The team spoke with one participant one-on-one. Print copies of maps were provided on the tables for participants to review.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Cornelius Wabasse of Webequie First Nation (WFN) with an attached letter regarding early circulation of the Draft Environmental Assessment Report / Impact Statement (Draft EAR/IS) for Review for the WSR Project. The letter advised the community that the Draft EAR/IS is now available for the community to review. The letter provided an overview of what is documented in the Draft EAR/IS and explained that it is being circulated in two stages to provide communities with an extended review period to provide comments on the document for a total of 120 days. The two stages of circulation are: 1) Early access for Indigenous communities from June 9 to October 7, 2025, and 2) Public and Stakeholders from August 8 to October 7, 2025. The letter explained that enclosed in the package is the Draft EAR/IS for the WSR Project for review which includes: One hard copy of the main body of the Draft EAR/IS, an electronic copy of the Draft EAR/IS and Appendices, and one hard copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree, and Cree. The letter also provided a link to the Draft EAR/IS on the Project website. The letter also noted that the draft Record of Consultation and Engagement with Indigenous communities, public, and stakeholders is not included in the Draft EAR/IS, but will be provided to the community when the Draft EAR/IS is released for public and stakeholder review on August 8, 2025. In the interim, consultation and engagement activities received from the communities is documented in the Consultation Progress Reports for Rounds 1, 2, and 3, previously sent to the community at key milestones in the EA/IA process, and can also be found on the Project website. The letter encouraged the community to actively participate in the review of the Draft EAR/IS and provided an email and/or mailing addresses to submit comments. For any questions or to schedule a meeting with the Project Team, Michael also provided his email and phone number.

WEBEQUIE SUPPLY ROAD
INDIGENOUS COMMUNITY MEETING

Environmental Assessment, Protocols/Consultation Process
November 10, 2021

OVERVIEW

Melanie LaForest of Indigenous Community Engagement (ICE) and Don Parkinson and Angela Brooks of SNC-Lavalin (SNC) held a meeting with Webequie First Nation (WFN) community members on November 10, 2021 at the Webequie First Nation Community Centre. Approximately 25 to 30 Webequie First Nation community members attended the community meeting. The purpose of this meeting was to share information on the Webequie Supply Road (WSR) Project Environmental Assessment (EA) process and give a presentation on WSR Project: Geology, Terrain, Soils, Vegetation, Groundwater & Surface Water, and Aquatic Habitat work plans along with a question and answer period. A WFN community member provided a translation of the information in Ojibway in real-time. The Project Team followed COVID-19 protocols.

Questions and feedback from the community were related to: (1) land use and road construction; (2) incorporating traditional knowledge; (3) climate change; and (4) baseline studies.

TABLE OF CONTENTS

WSR WEBEQUIE SUPPLY ROAD

01 WHERE WE ARE NOW
Project update and next steps

02 GEOLOGY/TERRAIN/SOILS STUDY/WORK PLAN FOR THE ENVIRONMENTAL ASSESSMENT (EA)
An explanation of what we plan to do as part of the geology/terrain/soils EA work

03 AQUATIC HABITAT STUDY/WORK PLAN FOR THE EA
An explanation of what we plan to do as part of the aquatic habitat EA work

04 GROUNDWATER STUDY/WORK PLAN FOR THE EA
An explanation of what we plan to do as part of the groundwater EA work

05 SURFACE WATER STUDY/WORK PLAN FOR THE EA
An explanation of what we plan to do as part of the surface water EA work

06 COMING UP
Our next visits and what we will be talking about

Where we are now

- The Webequie Supply Road Environmental Assessment (EA) Terms of Reference (ToR) was approved by MECP this past Friday
- This means that the work plan for the EA has been approved and we can now focus on completing the EA report since we now know what is expected of us
- Over the next few weeks, we will be visiting the community to explain each of the work plans that are required to be prepared as part of the federal impact assessment process

PROJECT UPDATE AND NEXT STEPS | WSR WEBEQUIE SUPPLY ROAD

Study Areas

- Geographic boundaries of the areas potentially affected by the project
- Change depending on the valued component (the things that are important to community members)

There are three study areas:

Project Footprint: The area directly disturbed (includes road, access roads, pits, quarries, storage yards, access roads)

Local Study Area: Extends about 1 km from the supply road and 500 m from temporary or permanents infrastructure related to the road

Regional Study Area: Includes environmental effects from road on the broader environment such as downstream water quality, caribou, changes to socioeconomic conditions

STUDY/WORK PLAN STUDY AREAS | WSR WEBEQUIE SUPPLY ROAD

The Geology/Terrain/Soils Study/Work Plan

What is does it involve?

- Collecting baseline information on the earth's structure and composition, geochemistry, geo-hazards, the height of the land (topography), soils and sediment (bottom lakes and rivers)

Objectives of the work

- Describe the geology locally and regionally
- Describe geological hazards (i.e., erosion)
- Determine the chemistry of construction materials disturbed such aggregate and rock sources
- Describe the potential for contamination of soils or sediments
- Describe soil layers and depths

GEOLOGY/TERRAIN/SOILS STUDY/ WORK PLAN | WSR WEBEQUIE SUPPLY ROAD

The Aquatic Habitat Study/Work Plan

Purpose

- Gather information of aquatic conditions at 26 waterbody crossings

Field Surveys

- Fish habitat assessments to describe the biological and physical characteristic at waterbody crossings
- Fish community sampling
- Benthic invertebrate surveys- looking at what lives in the sediment, as it is a good indicator of aquatic health
- Fish spawning surveys

Information Collected

- Fish species present and abundance
- Spawning patterns
- Species sensitivity to habitat changes
- Benthic invertebrate community

AQUATIC HABITAT STUDY/WORK PLAN | WSR WEBEQUIE SUPPLY ROAD

The Groundwater Study/Work Plan

Purpose

- Collect groundwater samples to analyze quality and chemical composition
- Analyze how groundwater levels change in areas of peat/organic materials
- Measure how easily water moves through the soil and rock (hydraulic conductivity)

Activities

- Wells have been installed along the road corridor and within the aggregate area (sources of gravel and road for road construction)

GROUNDWATER STUDY/WORK PLAN | WSR WEBEQUIE SUPPLY ROAD

The Surface Water Study/Work Plan

Purpose

- Collect surface water samples from 26 waterbody crossings
- Analyze the quality and composition of water samples- results are compared to federal and provincial water quality guidelines

Activities

- Sampling occurs at different times of year
- Water samples tested for physical (i.e., acidity, turbidity) and chemical (i.e., metals, nutrients, organic compounds, sediment)

SURFACE WATER STUDY/WORK PLAN | WSR WEBEQUIE SUPPLY ROAD

Coming Up

Upcoming WSR community meetings and topics:

Caribou and Wolverine / Wildlife & Wildlife Habitat / Species at Risk / Breeding Birds work plans-
November 24

COMING UP | WSR WEBEQUIE SUPPLY ROAD

November 22, 2021

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment studies. This upcoming week, **WSR Presents: Caribou and Wolverine/Wildlife and Wildlife Habitat/Species at Risk/Breeding Birds.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 23rd at 2:00-3:00 (EST)**. We encourage you and your community members to listen, for this will give your community membersthe opportunity to ask questions. You may call during the radio show at the **toll-free number:1-844-424-0500.**

In addition, the live streaming event is scheduled on the same day as the above radio show at **4:00pm – 4:30pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. All sessions are recorded and accessible on YouTube, you can subscribe at: Webequie Supply Road - YouTube. We have regular updates on our Facebook page that features community photos, informative videos, Frequently Asked Questions along with project information. You can follow WSR on Facebook at Supply Road | Facebook, Twitter, Instagram and http://www.linkedin.com/company/wfnsupplyroad You may also call with questions on the same toll-free number provided above during the live streams.

The WSR Project Team is offering opportunities of engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the WSR Project.

Engagement Options

Method	Description
Focus Group Sessions	With proper Covid-19 protocols in place, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment studies. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse groups(women, elders, youth, land users, etc.)
Community Sessions	With proper Covid-19 protocols in place, community information sessions can be conducted, whereby the WSR Project Team will discuss the Environmental Assessment process with a question-and-answer period at the end of the presentation.
Drop-in Sessions	With proper Covid-19 protocols in place, community members can drop-in at a safe location todiscuss the Environmental Assessment process with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment process facilitated by the WSR Project Team using Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the Environmental Assessment process to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the Environmental Assessment studies presentation and set up a conference call number to go through the presentation based on the area of interest your team wants to focus on and answer any questions.
Local Radio Call In Show	Using the local community radio, the WSR can present the Environmental Assessment studies with a local translator that the WSR will pay for and explain the Environmental Assessmentprocess. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the Environmental Assessment process.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching the WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, then we can mail these hardcopy WSR poster to your community for local distribution and all you need to do is email or call us to inform us that you need hardcopies of WSR poster.

Lastly, given the high and daily usage of social media channels by Indigenous leaders and members, you, your Council, and your staff can also follow us on Facebook, Twitter, Instagram, and LinkedIn to stay updated and repost it on your social media accounts to assist in information access, information dissemination, and information request associated with the WSR Project's environmental studies.

To obtain information on the Project, or to provide comments, please visit our website at http://www.supplyroad.ca or contact me at 807-472-6147.

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road
michael.fox@supplyroad.ca

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Web-Preliminary Study Areas for Indigenous Land Use and Interests-2021-12-13

INDIGENOUS KNOWLEDGE / INDIGENOUS LAND AND RESOURCE USE PROGRAM FOR THE WEBEQUIE SUPPLY ROAD PROJECT

Information Sharing Agreement

Purpose

The purpose of the Indigenous Knowledge and Land and Resource Use (IKLRU) Program Sharing Agreement is to:

- Document the shared understanding of how the Webequie First Nation IKLRU Study for the Webequie Supply Road Project will be completed;
- Document the anticipated activities that will be part of the IKLRU Program; and
- Document how IKLRU information will be integrated into the Environmental Assessment Report (EAR) / Impact Statement (IS).

Confidentiality and IK / TLU Sharing

- Webequie First Nation acknowledges that all IKLRU information is the property of Webequie First Nation and the individual knowledge holders who contributed to the study.
- Webequie First Nation will disclose the IKLRU as required through the regulatory process only.
- Webequie First Nation will store the IKLRU information in a secure location and it will be provided to the appropriate Project staff and consultants only.
- Webequie First Nation will use the IKLRU information to contribute to the EAR / IS.
- Webequie First Nation will not include the full IKLRU report or study in the EAR / IS.
- Webequie First Nation will provide relevant IKLRU information to the appropriate disciplines for use in their EAR / IS sections.
- Webequie First Nation will use the IKLRU information to assess impacts on Webequie First Nation land and resource use; thus, the IK section of the EAR / IS will summarize the IKLRU information without disclosing specific locations of use.
- Webequie First Nation will use the IKLRU information for the Project regulatory process only, including planning, design, assessment, construction, operation, maintenance and decommissioning.

IKLRU Study

Webequie First Nation and Webequie First Nation agree that the type of information in the IKLRU Study Plan and scope will be included in the IKLRU Study.

The IKLRU Study will include information about the geographic location of data collected. This can be as numerical coordinates or as a location on a map with appropriate reference points.

Webequie First Nation will accept any additional land and resource use-related information within the IKLRU Study Area, as community members deem appropriate.

Webequie First Nation and Webequie First Nation agree that upon completion of the IKLRU Study, Webequie First Nation will approve the Report for use in the EAR / IS.

Signing this Agreement

Webequie First Nation signing of this Sharing Agreement is no way represents their support for the Webequie Supply Road Project.

Re: Indigenous Knowledge / Indigenous Land and Resource Use Program for the Webequie Supply Road Project

Dear Chief Cornelius Wabasse,

We hope that this letter finds you and your community well.

Webequie First Nation (WFN) is the proponent of the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will extend from Webequie Airport to the mineral deposit area near McFaulds Lake as shown in the enclosed project map. WFN has started the provincial environmental assessment (EA) and a formal Notice of EA Commencement was issued on October 29th, 2021. The WSR Project is also subject to a federal impact assessment (IA) and the Notice of Commencement of the IA was issued on February 24th, 2020. Collectively the EA and IA are referred to as the "assessments" and will examine potential effects of the WSR Project including mitigation and monitoring, and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS). We will continue to provide you with updates as the assessment process continues, and welcome and appreciate your input throughout the planned consultation and engagement activities.

With this letter, we would like to share with you that we are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program for the Project. The IKLRU Program is a critical component of the information base upon which the assessments will rely. The information generated through the Program will be used in concert with scientific approaches, and both knowledge systems will be given equal consideration in forming the foundation for baseline conditions, predicting potential project effects, including potential impacts to your inherent Indigenous rights and interests.

The purpose of the IKLRU Program is to:

- Promote sharing of IKLRU information relevant to the Project;
- Help identify potential impacts of the Project, including those on Indigenous rights and interests; and

- Collaborate and work with Indigenous communities to enhance positive impacts or to identify measures to avoid/reduce potential effects on Indigenous rights and interests.

As traditional stewards of the land, we all must make certain that development in the area appropriately addresses the rights, interests, values, traditions, concerns, and aspirations of Indigenous communities within the assessment context, during the life of the WSR Project, and beyond. It is in this spirit that we invite Webequie First Nation to participate in the IKLRU program.

The IKLRU Program for the WSR Project will occur in two phases:

1. Collecting existing Indigenous Knowledge and information on Indigenous land and resource use that communities are prepared to share with WFN in order to help inform the early stages of the assessments; and
2. Completing project-specific Indigenous Knowledge and Lands & Resource Use studies, or compiling information/data in other form, that can be provided to the Project Team for integration into the assessment.

At this point, we are enquiring whether Webequie First Nation is interested in participating in the IKLRU Program in either (or both) phases of the Program. We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the IKLRU Program for the WSR Project. In addition, the Project Team can help communities access this funding, where applicable.

While the IKLRU Program is distinct from the Consultation Program for the WSR Project, the two are complementary and collectively serve to solicit Indigenous perspectives, values and inputs with respect to project planning and assessment process. You may share as much or as little IKLRU information as you wish, and in whatever form you prefer. Your community will also have the opportunity to review the EAR / IS to ensure accuracy of IKLRU information, including if it has been adequately, appropriately, and respectfully represented within the assessment process.

While there are significant benefits to integrating Indigenous Knowledge from your community in the assessment, we also recognize that this knowledge belongs to your community and that confidentiality needs to be respected. Our approach to working with your community on the IKLRU Program will be guided by the following key principles:

- The people of your community are a source of knowledge on uses of the land and its resources, associated cultural practices, and community values.
- We are your partner – our goal is to work together with you to conduct the IKLRU Program in a way that contributes to your community's well-being so that Indigenous Knowledge and land and resource use information can be meaningfully integrated into the assessment process.

Protection and confidentiality of IKLRU information is of the utmost importance to the Project Team. To honour and respect this important information, we propose establishing an Indigenous Knowledge Sharing Agreement with your community prior to the collection and use of your community's information. The Sharing Agreement would outline how confidential and sensitive information would be utilized in the WSR Project's assessment and design process. It would also adhere to all community-specific protocols and OCAP (ownership, control access and possession) principles. Once you've confirmed participation in the IKLRU Program, we will work with you to prepare the Sharing Agreement. We have attached a draft Indigenous Knowledge Sharing Agreement for your review and consideration.

In order to confirm that Webequie First Nation is interested in participating in the IKLRU Program, we ask that you contact us by January 27, 2022. Our Project Team will also reach out to you in a few days if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council to discuss next steps, including the methods and protocols your community will follow.

To express your community's interest or if you have any questions regarding the IKLRU Program or the WSR Project, please feel free to contact Michael Fox (807-472-6147; michael.fox@indigenousengagement.ca) or Brianna Patrick (204-223-5770; brianna.patrick@indigenousengagement.ca) of the Project Team.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Chief Cornelius Wabasse
Webequie First Nation

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Cornelius Wabasse,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as "the assessments" and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite Webequie First Nation to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

Next Steps

In order to confirm that Webequie First Nation is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist
Webequie Supply Road

Project Map

February 4, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment and Impact Assessment (EA / IA) process. This upcoming week's session is: **WSR Presents: EA / IA Process.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 9th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is exploring virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

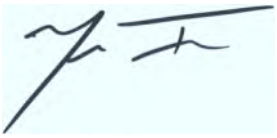
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

WSR
WEBEQUIE
SUPPLY ROAD

February 18, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Indigenous Knowledge. This upcoming week's session is: **WSR Presents: Indigenous Knowledge - Part 1.** The Project Team has planned an Indigenous Knowledge series, this upcoming week being the first part to that series.

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 23rd, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to brianna.patrick@indigenousknowledge.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

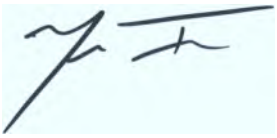
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

March 4, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Indigenous Knowledge. This upcoming week's session is: **WSR Presents: Indigenous Knowledge - Part 2.** The Project Team has planned an Indigenous Knowledge series, this upcoming week being the second part in the series.

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **March 9th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to brianna.patrick@indigenousknowledge.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

March 29, 2022

Dear Chief Wabasse,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps.

We will be offering a community information session, via Zoom, on **Monday, April 4 between 12pm and 1:30pm** for Webequie First Nation, where there will be a presentation on the WSR Project activities. We anticipate the community information session to be approximately 1.5 hours in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://maverickav.zoom.us/meeting/register/tZYlf-qrrD8rEtMfWJc4ivr9ojoqq5XR9CHw.

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: supplyroad.ca/vropenhouse.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

April 1, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Socio-Economics. This upcoming week's session is: **WSR Presents: Socio-Economics.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **April 6th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to brianna.patrick@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

corneliusw@webequie.ca

SUBJECT: Information on Requesting a Time Limit Extension for the Webequie Supply Road Project under the *Impact Assessment Act*

Dear Chief Wabasse:

The three-year legislated time limit to provide the Agency with the required information and studies, as described in the Tailored Impact Statement Guidelines (the Guidelines) issued on February 24, 2020, for the impact assessment of the Webequie Supply Road Project (the Project) will expire on February 24, 2023. From discussions held with the project team, the Impact Assessment Agency of Canada (the Agency) understands that Webequie First Nation will require an extension to the time limit.

In accordance with subsection 19(2) of the *Impact Assessment Act* (IAA), the Agency may, at the proponent's request, extend the legislated time limit by any period necessary for the proponent to provide the required information and studies. The required information and studies to be provided would include the Impact Statement and any additional required information and studies that may be identified as a result of:

- the Agency's verification review of the Impact Statement;
- the public comment period on the Impact Statement Summary;
- the technical review of the Impact Statement by the Agency and federal authorities; and
- associated consultation and engagement by the Agency with Indigenous communities.

In order for an extension to be considered and granted, proponents will need to be able to demonstrate that they have made progress on the development of the Impact Statement and that they have a work plan to complete it.

.../2

-2-

The Agency requests Webequie First Nation to provide the following information for the Agency's consideration on whether to grant an extension of the time limit for the impact statement phase for the Project:

- your reasons, directly related to the impact assessment process, for requesting an extension of the time limit (e.g., multiple field seasons for baseline studies, engagement needed to resolve issues and secure input, coordination with provincial assessment process);
- any changes to the environment at the project location, or to the project itself, that have occurred that may affect the impact assessment;
- a work plan detailing the progress made to date, accounting for work completed, work currently underway, and work not yet started, along with a breakdown of how the extended time would be utilized to provide all the required information and studies, including:
  - engagement activities with Indigenous communities and the public;
  - surveys with Indigenous communities and members of the public to collect baseline data, Indigenous knowledge and community knowledge;
  - field surveys to collect biophysical baseline data;
  - coordination with other parties, including coordination with Ontario for inclusion in the Impact Statement the outcomes from Ontario's Crown Consultation Approach that are relevant to the federal assessment;
  - submissions of the draft Impact Statement and the Impact Statement, including the time required for proponent-led engagement, document reviews by the Agency and federal authorities, and Agency-led consultation and engagement with Indigenous communities and the public;
  - time to address any deficiencies in the Impact Statement;
  - time to address issues that arose during proponent-led engagement activities, the public comment period on the Impact Statement, and Agency-led activities with Indigenous communities and the public; and
  - contingency allowance for unexpected delays in the project schedule;
- a progress report demonstrating advances made on the Project to meet the requirements of the Guidelines, including:
  - description of the type of engagement activities conducted to date with Indigenous groups, the public and government experts and their outcomes (i.e. what was achieved to inform the Impact Statement);
  - a summary of the baseline data (i.e. variables) collected to date;
  - determination of the final locations of project components, in particular the locations of the preferred road alignment, the aggregate pits and the access/service roads;
- any additional information that you believe is relevant.

Important: If a proponent fails to provide the information or studies within the three-year time limit, or within any time limit extension that may be granted by the Agency, the impact assessment would be terminated in accordance with section 20(1) of the IAA. If the impact assessment is terminated, the prohibitions under section 7 of the IAA would continue to apply to the Project. If the Proponent wishes to continue with the Project, it must submit an Initial Project Description to the Agency in accordance with section 10 of the IAA to once again commence the impact assessment process under the IAA. The information that must be provided in an Initial Project Description is detailed in the *Information and Management of Time Limits Regulations* under the IAA. Further information on the IAA is available on the Agency's website at https://www.canada.ca/en/impact-assessment-agency.html.

The Agency strongly advises Webequie First Nation to submit a complete request by **September 24, 2022,** for the Agency to process the request prior to the expiration of the legislated time limit on **February 24, 2023**. The Agency will post the time limit extension request documents submitted by Webequie First Nation and the Agency's response to the request on the Canadian Impact Assessment Registry.

We understand that Webequie First Nation will prepare a draft extension request, which we look forward to reviewing to ensure the draft contains all the requested information for the Agency's consideration. If you have any questions, please do not hesitate to contact Alexandra Oakes, the Project Manager, by phone at 647-291-3721 or by email at *Webequie@iaac-aeic.gc.ca*.

Sincerely,

Anjala Puvananathan

May 13, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on wildlife and species at risk. This upcoming week's session is: **WSR Presents: Wildlife and Species at Risk.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **May 18th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

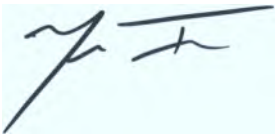
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

Webequie Supply Road

COUNTRY FOODS AND HUMAN HEALTH SURVEYS

We invite you to complete the Human Health and Country Foods Surveys as part of the Webequie Supply Road project!

This information will help inform the Environmental Assessment.

What is the Country Foods Survey?

We are gathering information about the country foods consumed in the community. Completing the Country Foods survey will help us learn about country foods and traditional practices in the community, so that we can understand the potential effects of the WSR on country foods and traditional practices.

What is the Human Health Survey?

We are gathering information about the health of the community to understand the potential effects of the WSR on physical, emotional, and spiritual health and well-being. Completing the Human Health survey will help us understand the potential effects of the WSR on the community's health.

FOR COMPLETING A SURVEY, WE WILL GIVE YOU A $25 VISA GIFT CARD!

Contact Leslie Spence or visit Leon Shewaybick and Glenn Wabasse at the band office for more information on how to complete the survey!

Visit *www.supplyroad.ca* to learn more about the WSR Project and to get involved!

WEBEQUIE SUPPLY ROAD
MEETING WITH CHIEF AND COUNCIL
Webequie First Nation
June 20, 2022

OVERVIEW

Michael Fox, Marian Tibor-McMahon and Stephanie Creighton of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team held a meeting with Webequie First Nation's (WFN) Chief and Council to discuss the WSR Socio-Economic Primary Data Collection Program, Country Foods and Human Health surveys, the Human Health Impact Assessment, and the Indigenous Knowledge/Indigenous Land and Resource Use (IKLRU) Program. Discussions regarding the Socio-Economic Program included identifying participants for the focus groups and potential ways to distribute and conduct the Country Foods and Human Health surveys. Discussions regarding the Human Health Impact Assessment included having a health committee review the survey, the impact that health discussions might have on youth, the health scope produced by Intrinsik Corporation and their role in the assessment, and the potential for having Councillors lead the health portfolio. Discussions regarding the IKLRU Program included information about the Program, the need for a committee to be established, and the potential to collaborate with WFN's Caribou Program. Additional items discussed at the meeting were regarding WFN's community festival, the Matawa Annual General Meeting, treaty days arrangements, and the documentary being produced by TheyMedia on WFN and Marten Falls First Nation.

NEXT STEPS

- Marian will send the health scope produced by Intrinsik Corporation to WFN Councilors Selina and Tyler and to request a meeting
- Michael and Intrinsik to set-up a teleconference to discuss next steps for getting councillors to lead the health portfolio
- Michael to follow up with Harry, the point person for the Caribou Study, to coordinate times for the IKLRU Program Study. Meeting to take place on September 16, 2022 in WFN.

June 24, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on cultural heritage This upcoming week's session is: **WSR Presents: Cultural Heritage.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 29th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. July 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

The WSR Project Team is currently hosting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

If the WSR Project Team has already hosted a virtual information session for your community, you can watch the recording of your community's session at: **supplyroad.ca/sessions/**. You can leave questions or comments at any time on your community's page and the Project Team will provide a response. If the WSR Project Team has not yet hosted a virtual information session for your community, you can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Socio-Economic Primary Data Collection Program

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socioeconomic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. You can find more information regarding the program on the WSR website: https://www.supplyroad.ca/ik-and-socio-economic/

We would like to invite your community to participate in the WSR socio-economic primary data collection program. To express your community's interest or if you have any questions regarding the socio-economic primary data collection program for the WSR Project, please feel free to contact Marian Tibor-McMahon at 416-668-3298 or marian@indigenousengagement.ca.

At any time, you can access additional information on the WSR website: **supplyroad.ca.** You can also stay tuned with the WSR Project by following our social media channels:

August 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Consultation Round 2

Throughout the EA/IA phase, the Project Team conducts studies to gather information on a wide range of topics and consults with Indigenous communities, members of the public, and other stakeholders, to evaluate the Project and its potential effects. This month we are concluding our Consultation Round 1 and will be moving into Round 2, before the final Round 3.

We encourage community members to watch their information session at **supplyroad.ca/sessions/** where you can find your community-specific page.

Consultation Round 2 will focus on the following topics:

- Summary of input received from Consultation Round 1
- Identification and evaluation of alternatives
- Preliminary recommended preferred route and supportive infrastructure (aggregate/rock source areas, construction camps, access roads), including rationale for selection
- Preliminary engineering design elements of WSR (bridges/culverts)
- Next steps and schedule

Stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

The WSR Project website also has various informational videos, communication materials and project updates. Please visit: https://www.supplyroad.ca/

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

October 07, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations - Caribou.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **October 11th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.

HEALTH IMPACT ASSESSMENT (HIA) OF THE WEBEQUIE SUPPLY ROAD

ENGAGEMENT

SCHEDULE

May 24, 2022

Proposed Schedule – Health Impact Assessment Webequie First Nation Engagement Activities (June, 2022)

Date	Proposed Time	Activity	Participant	Topic
June xy, 202	10:15 – 11:00 am	Interview	Councillor, Harry Wabasse	WFN health and wellbeing
	11:00 – 11:45 am	Interview	Councillor(s), Randy Jacob and/or Selena Wabasse	WFN health and wellbeing
	11:45 am – 12:30 pm	Interview	FN Health Representative / Community Nurse from Nursing Station and Jeffrey Jacob	Community health status and overall wellbeing
	1:00 – 1:45 pm	Interview	Lynn Wabasse from the Family Wellbeing Program	Health and wellbeing
	2:00 – 4:00 pm	Focus Group	Women members of WFN	Women's focus group on health and wellbeing
	4:00 – 4:45 pm	Interview	Crisis Intervention & Prevention Coordinator, Peter Jacob	Crisis Prevention in Webequie
June xy, 2022	10:00 am – 12:30 pm	Scoping Workshop	HIA Steering Committee members	HIA Scope
	12:30 – 1:15 pm	Interview	Community Wellness Project and Cultural Department Coordinator, Levi Sofea	Wellness in Webequie
	1:15 – 3:15 pm	Focus Group	Elders in Webequie (men and women)	Health and wellbeing of Elders in Webequie
	3:15 – 5:00 PM	Focus Group	Youth community members	Youth focus group on health and wellbeing

Key Personnel Interviews

Thank you for taking the time to participate in this **Key Personnel Interview** for the Health Impact Assessment (HIA) of the Webequie Supply Road (WSR) Project (hereafter called 'the HIA'). This HIA aims to understand the potential health impacts, both positive and negative, of the WSR to the Webequie First Nation (WFN) community. The HIA would also like to understand how these health impacts are distributed within your community. In addition to the **Key Personnel Interviews** (what we're doing now), we are also conducting a survey of the community with the goal to capture the full picture of the current health conditions of your community, and the results will be used in the HIA study. The survey and your responses in this discussion will be extremely helpful to us. We will then assess potential health impacts due to the WSR on your community. As we complete the HIA, we will make suggestions and recommendations for the improvement of any beneficial effects and to reduce any harmful effects associated with the WSR. Meegwetch.

Potential Questions

Interviews will be kept short to approximately 30 minutes; approximately 5-6 questions depending on how the conversation goes.

1.1. WFN Chief and/or Councillors with most familiarity with overall health in the community

- *Identify councillors for the interviews*
- Topics to be covered:
    - What do you think are the main health issues of concern to the community? What do you think are some reasons these health issues exist?
    - What do you think are some solutions to address these health issues?
    - What underlying factors would you say need to be focused on in the near future to improve the community's health?
    - Do you think the WSR will impact the health of the community either now or in the future? If yes, how will it impact the health of the community?
    - Would you like to share any other information with us which could help the HIA?

1.2. Webequie Nursing Station – Community Health Representative or a Nurse

- *Identify individual(s) for the interview(s)*
- Topics to be covered:
    - In your opinion, what is the overall health of the community?
    - What do you think are the main health issues of concern to the community? What do you think are some reasons these health issues exist, and what do you think are some solutions to address these health issues?

- Are there any recent changes you have noticed in the health of the community? If yes, what are they?
- Do you think the Nursing Station is the first place the community goes to with their health concerns? How many individuals do you see in the Nursing Station daily? And what are the most common health concerns your hear about from community members?
- What are some major gaps in healthcare for the community? What underlying factors would you say need to be focused on in the near future to improve the community's health?
- Could you identify some of the vulnerable groups in the community, e.g., elderly, youth, single parents, etc.
- Do you think the WSR will impact the health of the community either now or in the future? If yes, how will it impact the health of the community?
- Would you like to share any other information with us which could help the HIA?

1.3. Family Wellbeing Program – Lynn Wabasse

- In your opinion, what is the overall health of the community?
- Can you tell us about the Healthy Baby and Healthy Children Program? Could you identify some of the vulnerable groups in the community, e.g., elderly, youth, single parents, etc.
- Do all the health and wellbeing programs provided to the community have equal uptake? What are some of your most sought-after programs? What are some major gaps in healthcare for the community?
- What areas of concern would you say need to be the focus in the near future?
- Do you think the WSR will impact the health of the community either now or in the future? If yes, how will it impact the health of the community?
- Would you like to share any other information with us which could help contribute to the HIA?

1.4. Crisis Intervention & Prevention Coordinator – Peter Jacob

- In your opinion, what is the overall health of the community?
- Can you tell us about the crisis intervention and prevention program at Webequie? How often are your services called upon, and what are the main crises faced by community members?
- What are some major gaps in the program, especially when it comes to addressing mental health and wellbeing of vulnerable members?
- When it comes to crisis intervention, what areas of concern would you say need to be the focus in the near future?

- Do you think the WSR will impact the health of the community either now or in the future? If yes, how do you think it will impact the community from a crisis intervention point of view?
- Would you like to share any other information with us which could help contribute to the HIA?

1.5. Community Wellness Project and Cultural Department Coordinator – Levi Sofea

- In your opinion, what is the overall health of the community?
- Do all the wellbeing programs provided to the community have equal uptake? What are some of your most sought-after programs? What are some major gaps in wellness and care for the community?
- What are some initiatives to keep culture and language alive in the community? Are there specific initiatives targeted to the youth?
- What areas of concern would you say need to be the focus in the near future?
- Do you think the WSR will impact the overall wellbeing of the community either now or in the future? If yes, how?
- Would you like to share any other information with us which could help contribute to the HIA?

Focus Group Questions

Thank you for taking the time to participate in this **Focus Group** for the Health Impact Assessment (HIA) of the Webequie Supply Road (WSR) Project ('the HIA'). This HIA aims to understand the potential health impacts, both positive and negative, of the WSR to the Webequie First Nation (WFN) community. The HIA would also like to understand how these health impacts are distributed within your community. In addition to the **Focus Groups** (what we're doing now), we are also conducting a survey of the community with the goal to capture the full picture of the current health conditions of your community, and the results will be used in the HIA study. The survey and your responses in this discussion will be extremely helpful to us. All this information will help us better understand the potential health impacts due to the WSR on your community. As we work on the HIA, we will make suggestions and recommendations for the improvement of any beneficial effects and to reduce any harmful effects associated with the WSR. Meegwetch.

[NOTE: Intrinsik aims to have at least four focus groups (with 3-5 individuals in each group): women, Elders, youth and men. These are the general health-related topics we aims to bring up during focus group sessions, and will follow the discussion and primarily listen to the participants share their thoughts.]

General questions for focus groups:

- Can you describe what 'health' means to you and to your FN?
  - What is your personal definition of health?
  - Does it encompass more than just physical well-being? What else is included?
  - What does a healthy community look like to you?
- What do you think are some of the main health (physical, mental, spiritual) concerns in your group, and what solutions do you think are most useful to manage these health concerns?
- In terms of your health and your access to healthcare services in the community, do you think your group is better/worse off than other groups in Webequie?
- What are some things that stand in the way of your group having good health and access to health care? What are some of the health care services that you think could be changed to better help your group?
  - What is working well and what is not working? Is there a(n) (easy) fix?
- In general, what are your thoughts on the overall mental and spiritual wellbeing of members in your group?
- How do you think the WSR will impact your health and wellbeing?
- Would you like to share any other information with us which could help contribute to the HIA?

Additional questions:

- Do members of your group feel safe in the community? And do you feel like you're a part of the community? Are there times when you are made to feel like an outsider?
  - What makes a community feel safe? Do you feel that your community is safe? What are some of the barriers to safety and how might they best be addressed?
  - Do you feel that you are part of a community? Do you feel a sense of belonging and social cohesion with others in your community?
  - Do you ever feel discriminated against by others in your community or by those outside of your community?

HEALTH IMPACT ASSESSMENT (HIA) OF THE WEBEQUIE SUPPLY ROAD (WSR) PROJECT

Health Impact Assessment (HIA) is a tool used to thoroughly evaluate both the potential positive and negative health impacts of a project and to understand how these impacts are distributed within a community. By looking at a project through a health lens, the HIA process provides evidence-based recommendations that aim to enhance the potential benefits of the project and reduce the potential harmful impacts. This HIA of the Webequie Supply Road (WSR) Project aims to assess the potential health impacts of a 107-kilometre all-season road being proposed by Webequie First Nation (WFN) that will connect Webequie Airport and the McFaulds Lake area in Northern Ontario. The WSR Project would connect the WFN to existing mineral exploration activities and potential future mineral development within the Ring of Fire area of Ontario. The Project could also become part of a future all-season road network connecting the WFN and the Ring of Fire area to the provincial highway system in Nakina.

This HIA will include Indigenous knowledge, cultural, social, environmental sciences and economic aspects of the project, all of which add value to the assessment and benefit the community by identifying the potential positive and negative impacts on the health and well-being of WFN and other Indigenous communities. Additionally, by engaging with the community, this HIA also aims to provide an opportunity to address community health concerns in a meaningful way. **Figures 1** and **2** demonstrate some of the key concerns from a First Nations' perspective on health, and the social determinants of health as evaluated by an HIA. The overall HIA process is shown in **Figure 3**.

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON
P0T 3A0

Re: Round 1 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Wabasse:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report (electronic and hard copy), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);

- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 2 for the Project from Winter 2023 to Summer 2023. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 1;
- Identification and evaluation of alternatives (routes, aggregate source areas, etc.,);
- Preliminary recommended preferred route and supportive infrastructure (aggregate/ rock source areas, construction camps, access roads), including rationale for selection;
- Preliminary engineering design elements of WSR (bridges/culverts); and,
- Next steps and schedule.

We welcome any feedback and input your community may have on the attached Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

November 2, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week featuring our special guest storyteller/comedian Ron Kanutski. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations – Fish and Fish Habitat.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 8th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

November 17, 2022

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Biweekly Radio and Livestreaming Series is Back

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Building Roads in Muskeg Areas/James Bay Lowlands.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **Tuesday, November 22nd, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.

Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Other Ways to Stay Up To Date

You can also stay tuned with the WSR Project by following our social media channels:

WEBEQUIE SUPPLY ROAD PROJECT

Webequie First Nation Newsletter
Issue 7 – December 2022

Greetings!

The Webequie Supply Road (WSR) Project Team is writing to provide the Webequie First Nation (WFN) community a project update. Since the Terms of Reference (ToR) was approved, the Project Team has been working on the Environmental Assessment/Impact Assessment (EA/IA) phase of the Project and has concluded Round 1 of consultation.

This newsletter will provide an update on project activities, such as the upcoming community visit to WFN, Human Health Activities, and the Project team's presentation at the Ontario Association for Impact Assessment Conference (OAIA).

Upcoming Community Visit – December 2022

The WSR Project Team will be visiting WFN again this month to conduct Human Health activities. We will be gathering information about the health of the community to understand the potential effects of the WSR on physical, emotional, and spiritual health and well-being. Completing the Human Health survey will help us understand the potential effects of the WSR on the community's health.

Human Health

The goal of human health studies on the Project is to identify and consider the potential effects of the Project on the health of Indigenous communities (positive or negative). Health areas that will be assessed are:

- Mental Health and Well-being
- Social Well-being
- Health Behaviour
- Physical Well-being
- Recreational Activity
- Spiritual Well-being
- Community Well-being
- Public Safety
- Health Care Services

How will information be gathered?

- ⇒ Community documents
- ⇒ Public documents
- ⇒ Government reports
- ⇒ Scientific literature
- ⇒ Assessments from similar projects
- ⇒ Consultation activities and social research methods:
  - » Household surveys, key informant interviews, focus groups, and
  - » Indigenous Knowledge and Land Use studies

Baseline information for the following environmental aspects will be collected to help assess effects on health:

- Air quality – background air quality;
- Noise – background noise levels;
- Vibration – vibration levels;

- Surface Water and Groundwater – water quality and quantity;
- Soil – soil quality
- Country Foods – types of country foods consumed, quality of country foods consumed, amount, when and how often they are consumed, and the benefits they provide

OAIA Conference

In October 2022, Leslie Spence and Marian Tibor-McMahon highlighted the collaborative social research that WFN is doing with the WSR Project Team in Toronto at the Ontario Association for Impact Assessment (OAIA) Conference *Back to Basics: Creating Value Through Environmental Assessment.*

This presentation explored how the WSR Socio-economic Baseline Study contributes to the WFN's Social License to Operate. It explored theoretical frameworks such as the GBA+ which have informed the Baseline Study and summarized the primary research methods that are being utilized for data collection such as community-based surveys, in-depth interviews, focus groups, virtual open houses, livestreams, and radio shows.

As an Indigenous-lead Baseline Study, this study is unique in its collaboration between Webequie First Nation and the Project Team. We expect that the Baseline Study will provide a more holistic and comprehensive understanding of the community's history, barriers and opportunities for the future, including the positive and negative effects of the WSR.

Happy Holidays!

The WSR Project team would like to wish Webequie First Nation a happy and safe holiday season.

Stay Tuned!

Stay tuned for our next Project update. For additional information on the project, please visit our project website at: www.supplyroad.ca or by contacting:

WSR Local Coordinator: leslies@webequie.ca (807-356-5078)

Regional Consultation Lead: michael.fox@supplyroad.ca (807-472-6147)

Consultation Lead for SNC-Lavalin: Don.Parkinson@snclavalin.com (416-540-1142)

December 28, 2022

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON
P0T 3A0

Dear Chief Wabasse:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Consultation Progress Report Round 1

On October 28, 2022, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, December 28, 2022, the package status indicates that it has been successfully delivered to your community on November 25, 2022.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Engagement Opportunities

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

We welcome any feedback and input your community may have on the Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

January 5, 2023

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie ON P0T 3A0
corneliusw@webequie.ca

Chief Wabasse:

On October 21, 2022, the Impact Assessment Agency of Canada (the Agency) received your request for an extension to the three-year legislated time limit under the *Impact Assessment Act* (the IAA), to provide the required information or studies for the impact assessment of the Webequie Supply Road Project (the Project). As per subsection 19(2) of the IAA, at the proponent's request, the Agency may extend the time limit by any period that is necessary for the proponent to provide the Agency with the required information or studies.

Following a review of available information, including the information submitted in your request, the Agency has determined that it will **extend the time limit**. The Agency is of the view that:

- you have demonstrated progress in the development of the required information and studies and have a realistic work plan to complete all work;
- the COVID-19 pandemic and resulting response measures affected your ability to meet the time limit; and
- the extended time limit would allow for continued coordination with the province and help manage consultation fatigue among the Indigenous communities.

…/2

- 2 -

Pursuant to subsection 19(3) of the IAA, if the Agency extends the time limit, it may require the proponent to provide it with any additional information or studies that the Agency considers necessary for the conduct of the impact assessment. After reviewing the information available to the Agency and views expressed by Indigenous communities, federal authorities and the public, the Agency has determined that no additional (new) information is required to conduct the impact assessment.

However, in preparing the Impact Statement, Webequie First Nation is expected to follow updated technical guidance and best practices, in accordance with project-specific direction issued by the Agency. This includes having to follow the updated technical guide to the Strategic Assessment of Climate Change, which requires the application of a Tier 2 or Tier 3 approach to estimate emissions and removals of greenhouse gases from land-use change in the effects assessment for the Project.

Webequie First Nation also is expected to meet the requirements set out in the Tailored Impact Statement Guidelines for the Project in relation to engagement with other Indigenous communities, as necessary, to inform the content of the Impact Statement, including the effects assessment and details on potential impacts on the exercise of Aboriginal and Treaty rights of the communities listed in the Indigenous Engagement and Partnership Plan for the Project. The Agency notes from your request that, to date, participation by potentially impacted communities has been low.

Furthermore, the Agency requires that all comments provided by the federal review team, including those provided on the study plans and work plans, as well as the concerns expressed by Indigenous communities and members of the public, be fully addressed in the Impact Statement.

The deadline to provide the Agency with the information and studies required for the impact assessment of the Project is now **January 6, 2027**.

The required information and studies to be provided include the Impact Statement and any additional information or studies that may be identified as a result of:

- the Agency's conformity review of the Impact Statement;
- the public comment period on the Impact Statement Summary;
- the technical review of the Impact Statement by the Agency and federal authorities; and
- associated consultation and engagement by the Agency with Indigenous communities and the province.

…3/

- 3 -

If the required information and studies are not provided within the extended time limit that has been granted, the impact assessment for the Project would be terminated in accordance with subsection 20(1) of the IAA. If the impact assessment is terminated, note that, in accordance with subsection 7(1) of the IAA, proponents of a designated project are prohibited from carrying out any act related to the project that may cause one of the effects listed therein. If the proponent wishes to continue with the Project after the termination of the assessment, it must submit an Initial Project Description to the Agency in accordance with section 10 of the IAA.

Please note, your request, this determination, and a notice informing the public of the new time limit will be posted to the Canadian Impact Assessment Registry Internet site at *https://iaac-aeic.gc.ca/050/evaluations/proj/80183*.

If you have any questions, do not hesitate to contact Anjala Puvananathan, Regional Director for Ontario Region, by telephone at 416-952-1576 or by email at *webequie@iaac-aeic.gc.ca*.

Sincerely,

Eric Landry

WEBEQUIE
SUPPLY ROAD

January 27, 2023

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON
P0T 3A0

Dear Chief Wabasse:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Consultation Progress Report Round 1

On October 28, 2022, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, January 27, 2023, the package status indicates that it has been successfully delivered to your community on November 25, 2022.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

We welcome any feedback and input your community may have on the Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Radio Show and Livestream Series

The WSR Project team will be resuming the radio show and livestreaming series in the coming weeks. Stay tuned for more information.

Engagement Opportunities

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and

we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Thank you very much and we look forward to hearing from you soon.

March 2, 2023

Dear Chief Wabasse,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Monday, March 13th from 12:00pm-1:00pm EST** for Webequie First Nation, where there will be a presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/82873430799.

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 828 7343 0799.**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/webequie/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

At any time, you can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

WSR240-WEB-PR-LT-0477 Web-WSR Letter re Virtual Community Info Session WFN-2023-03-02

March 9, 2023

Dear Chief,

Radio Show and Livestream

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: The Alternatives Assessment Process – An Overview.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on March 14th, 2023 at 12:00pm - 1:00 pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team will begin virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

March 17, 2023

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON
P0T 3A0

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Wabasse,

We hope that this letter finds you and your community well.

As you know from our previous correspondence, Webequie First Nation is the proponent of the Webequie Supply Road Project, a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities.

Today, we are writing to confirm whether your community has an interest in participating in the Socio-Economic Primary Data Collection Program and is follow-up to the invitation letter sent to you on December 20, 2021. In this letter, we outlined the purpose of the socio-economic study, types of information we would like to gather and suggested primary data collection methods (e.g., community surveys, focus groups, key informant interviews). Primary data is information collected first-hand directly with community members about issues and conditions of the community.

We have a timeframe for the EA/IA process to complete our studies and document the results. Our goal this year is to complete a draft Socio-Economic Existing Conditions Report, which documents the socio-economic baseline conditions of communities. We would like to collaborate with your community to discuss and collect socio-economic information and/or verify information gathered to-date based on current desktop research to help us to understand existing social and economic conditions.

The preliminary “Valued Components” for the EA/IA, which represent aspects of social and economic conditions that are important to you and the community, and require information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;

- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

In order to meet the schedule for the completion of the EA/IA study, we respectfully request an indication of your community's interest in participating in the Socio-Economic Primary Data Collection Program by **April 17, 2023**, as it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by **June 16, 2023.**

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Heather Swan, Deputy Project Manager
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Michael Fox, Regional Consultation Coordinator, Webequie Supply Road
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, SNC-Lavalin Inc.

March 22, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Alternatives Routing in the Preferred Corridor.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, March 28th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

File Name: WSR-WFN Community Visit Poster Print-2023-04-21.pdf
Activity Method: E-mail
Date Published: Apr 21, 2023

Webequie Supply Road
HUMAN HEALTH VISIT AND COMMUNITY INFORMATION SESSIONS

DATES: MAY 11TH & 12TH, 2023

The **Webequie Supply Road (WSR)** Project Team is visiting the community to talk to community members and request your feedback on the health of the community and to understand the potential effects of the WSR Project on the physical, emotional, and spiritual health and well-being of the community.

The Project Team will be holding discussions with women, youth, men, and land users to better understand the potential effects of the WSR on the community's health and wellbeing.

The WSR Project team will also be holding **community information sessions** to share information on the health assessment that is part of the Environmental Assessment/Impact Assessment for the Project and to introduce new members of the Project Team.

A raffle will be held at the community information sessions.

When:
Thursday May 11th, 2:00pm – 4:00pm - ***Snacks will be provided***
Friday May 12th, 11:00am – 1:30pm - ***Lunch will be provided***

Where: Youth Centre

Contact **Leon Shewaybick** at the band office OR message/email **Leslie Spence** (leslie.spence@supplyroad.ca) if you have questions or for more information.

Visit *www.supplyroad.ca* to learn more about the WSR Project and to get involved!

WEBEQUIE SUPPLY ROAD
WEBEQUIE ELDERS INDIGENOUS KNOWLEDGE SESSION
Webequie First Nation
May 2-3, 2023

TEAM MEMBERS

Michael Fox, Indigenous and Community Engagement (ICE)
Serene Spence, Indigenous and Community Engagement (ICE)
Stephanie Creighton, Indigenous and Community Engagement (ICE)
McKenna Baxter, Indigenous and Community Engagement (ICE)
Fred Jacob, Translator, Webequie First Nation
7 Elders from Webequie First Nation
Tony McGuire, TheyMedia

OVERVIEW

The Webequie Supply Road Project Team held an Elder's sharing session for Webequie First Nation on May 2-3, 2023 at the Delta Hotel in Thunder Bay. The purpose of this meeting was to gather Anishiniimowin Knowledge to understand unique knowledge systems, practices, and beliefs developed by Indigenous communities over generations. The focus of the session was on learning about the Elders, their families, and their worldviews. There were 7 Elders from WFN in attendance at the session.

Translation was provided by Fred Jacob of WFN. TheyMedia was also present to record the session for translation purposes.

May 3, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Analysis of Alternatives- Multiple Accounts Analysis - What is it?**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, May 9th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks

Craig Wallace, Project Manager, SNC-Lavalin Inc.

WEBEQUIE SUPPLY ROAD
INDIGENOUS COMMUNITY MEETING

Environmental Assessment, Protocols/Consultation Process
May 11 – 12, 2023

OVERVIEW

Jennifer Ashawasegai-Pereira of SNC-Lavalin, Faiza Waheed and Elayne Laroque of Intrinsik, and Leslie Spense of Webequie Supply Road (WSR) Project Team visited Webequie First Nation (WFN) from May 11-12, 2023 to conduct engagement activities for the human health assessment. During the first day, the team provide an overview presentation to interested community members with lunch. Conducted a women's focus group, conducted one-on-one interviews with community members apart of the Community Aboriginal Recreational Activator Program, Choose Life Program, School employees and conducted a youth focus group. On the second day, the Project team provided an overview presentation to interested community members with breakfast. Conducted a men and land users focus group, and a one-on-one interview with an individual from the home community care program.

May 17, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternatives for Supportive Infrastructure (i.e., camps, laydown areas, aggregate/rock sources, access roads).**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Wednesday, May 24th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

May 24, 2023

Dear Chief,

We would like to provide a **correction to the times** provided on our previous correspondence related to the Webequie Supply Road (WSR) project radio show and livestream happening today.

Radio Show and Livestream
The WSR Project team will be resuming the live streaming and radio call-in show today. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternatives for Supportive Infrastructure (i.e., camps, laydown areas, aggregate/rock sources, access roads).**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Wednesday, May 24th, 2023 at 6:00pm – 7:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

The livestreaming event is scheduled on the same day as the above radio show at **7:30pm – 8:00pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we apologize for any confusion this may have caused and we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

May 26, 2023

Dear Chief Wabasse,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Monday, May 29th between 12:00pm-1:00pm EST** for Webequie First Nation, where there will be the second part of the presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/87024700875.

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 870 2470 0875.**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/webequie/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. At any time, you can access additional information on the WSR website: **www.supplyroad.ca** Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Webequie Supply Road (WSR) • Northern Road Link (NRL) • Marten Falls First Nation Community Access Road (MFFN CAR)

ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS FORUM
FEBRUARY 7th & 9th, 2023
THUNDER BAY, ON
GENERAL SUMMARY

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
1.	Webequie First Nation	Need to condense information in a way communities can understand as big documents is not their way to looking at things.	The proponents are taking steps to ensure the project information is understood, such as generating fact sheets, newsletters, and plain language summaries of key documents. In addition, some key documents are translated to Indigenous languages. The proponents will endeavour to continue to provide project information in a way that is concise and uses layman's terms whenever possible.
2.	Webequie First Nation	Important to take the time to listen and learn from First Nations.	Comment acknowledged. The proponents are committed to pursuing open dialogue and consultation with Indigenous communities during the environmental assessment processes.
3.	Attawapiskat First Nation	Community members do not know what is going on with the road Projects. Proponents tend to deal with Chief and Council and information does not get down to the grassroots people. The colonial processes of Chief and Council do not always represent the interests of the Treaty Rights holders.	The proponents will continue to discuss with community leadership how to ensure that community members are reached directly during consultation and engagement activities.
4.	Attawapiskat First Nation	Do not see Treaty people at the forum, only business people.	All Indigenous communities scoped into the EA/IA processes by the Province and IAAC were invited to attend the ATRI Forum.
5.	Attawapiskat First Nation	Do not see Treaty people at the forum, only business people.	All Indigenous communities scoped into the EA/IA processes by the Province and IAAC were invited to attend the ATRI Forum.

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
6.	Attawapiskat First Nation	We (Attawapiskat First Nation) only received notice for the IAAC Northern Road Link Project Open House one day before the session. IAAC is not advertising its consultation and they are not meeting with the people.	Thank you for this comment. We will share with IAAC.
7.	Attawapiskat First Nation	It is important to talk to Treaty Rights holders and that is why he is streaming the session back to the community.	The proponents will look into options to live-stream consultation and engagement activities when possible.
8.	Webequie First Nation (Chief)	Information being shared at the Forum will help the Proponents see what the impacts to Aboriginal and Treaty Rights may be and will help them make good decisions.	Comment acknowledged.
9.	Webequie First Nation (Chief)	Need to find balance between traditional way of living and the new way of life.	Comment acknowledged. The proponents looks forward to learning more about Indigenous communities' traditional way of life through the Indigenous Knowledge (IK) Programs.
10.	Webequie First Nation (Chief)	There are challenges of keeping Aboriginal and/or Treaty Rights and Interests information confidential. It will be up to each community to decide whether to share information, get feedback and report back to their communities	The proponents acknowledge that it is up to each community to decide whether to share information. It is anticipated that Indigenous Knowledge (IK) collected through the IK Programs will be governed by IK Sharing Agreements that indicate how confidential information will be used to inform the effects assessment but will be protected from public or third-party disclosure.
11.	Webequie First Nation (Chief)	Transparency is important when discussing Aboriginal and/or Treaty Rights and Interests.	Comment acknowledged.

ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
12.	Aroland First Nation	Some communities pulled out of the Forum because they were told that advisors were not welcome at the Forum. Aroland First Nation decided to stay despite the fact they did not have their advisors with them to get information as they were not able to meet because of the COVID pandemic.	"The proponents acknowledge there was a miscommunication during the planning of the ATRI Forum. The proponents thank Aroland First Nation for staying in the forum despite this miscommunication. The proponents welcome Indigenous community Advisors/Consultants in all Indigenous consultation and engagement activities for the EA/IA processes.
13.	Aroland First Nation	The group is talking about consultation but this cannot be consultation if community advisors are not present.	The proponents welcome Indigenous community Advisors/Consultants in all Indigenous consultation and engagement activities for the EA/IA processes.
14.	Aroland First Nation	Aroland First Nation is key to the Projects but feels left out. Further, it is a hard position us (for Aroland First Nation) if our neighbours to the north want to do things. The Proponents need to do better.	Comment acknowledged. Marten Falls First Nation and Aroland First Nation have initiated a nation to nation dialogue to resolve concerns raised by Aroland First Nation and are working towards building a collaborative relationship.
15.	Aroland First Nation	The Proponents need to do better to understand what Aroland First Nation wants to do as well.	The proponents are committed to collaborating with Aroland First Nation throughout the EA/IA processes.
16.	Aroland First Nation	We (Aroland First Nation) is attending the Forum to build relationships with our neighbours.	The proponents thank Aroland First Nation for participating in the ATRI Forum. The proponents also aim to build relationships with our neighbours, and are committed to pursuing open dialogue and consultation with Indigenous communities during the EA/IA processes.

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
17.	Aroland First Nation	Aroland First Nation will not support any development until the federal Regional Assessment is completed. What will the cumulative effects be. Aroland First Nation has written letters to that effect.	"The proponents acknowledge Aroland First Nation's request that the Regional Assessment precede the individual road assessments; however, completion of the Regional Assessment in the Ring of Fire Area is not a requirement for the proponents to proceed with the individual EA/IA processes. It is the proponents' understanding that the Impact Assessment Agency of Canada (the Agency) is currently engaging with interested Indigenous communities on a proposed approach for a Regional Assessment that could be co-led by the Agency, Indigenous communities and Ontario. Information generated by the Regional Assessment will be incorporated into the Project's EA/IA as it becomes available. The decision to proceed with the EA/IA processes for the three road projects is consistent with the agreements between the proponents and the Province of Ontario. The proponents are committed to realizing the intended/perceived benefits of the roads for their respective communities, and the region as a whole, within a reasonable timeframe. Deferring/pausing the individual EA/IA processes does not align with these objectives. The EA/IA for the road projects will each include a cumulative effects assessment. The scoping of the cumulative effects assessments will include other past, present or reasonably foreseeable projects and activities, including the other road projects as well as proposed mining projects in the region.

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
18.	Aroland First Nation	The parties need to rethink the strategy about not allowing advisors. It is strange that government and Proponent advisors are here, yet First Nations are denied their advisors. Aroland First Nation will listen, watch, participate and report back to the community.	The proponent acknowledges there was a miscommunication during the planning of the ATRI Forum. The proponent welcomes Indigenous community Advisors/Consultants in all Indigenous consultation and engagement activities for the NRL Project's EA/IA process.
19.	Aroland First Nation (Chief)	Need to work with Council to answer to members. We came to listen and everyone needs to work together. Proponents need to work with Aroland First Nation.	The proponents are committed to collaborating with Aroland First Nation throughout the EA/IA processes.
20.	Aroland First Nation (Chief)	We (Aroland First Nation) welcome and support Marten Falls First Nation for the Community Access Road Project only, but now there are other things attached (NRL, WSR). Why is Aroland First Nation not involved and why wasn't the community been asked to participate in the development of the Project(s).	Comment acknowledged. Marten Falls First Nation and Aroland First Nation have initiated a nation to nation dialogue to resolve concerns raised by Aroland First Nation and are working towards building a collaborative relationship.
21.	Aroland First Nation (Chief)	The Road Projects will affect everyone and we (Aroland First Nation) are already seeing impacts that will change everything. You can not reverse impacts.	The proponents understand the roads would result in effects/changes, and are conducting individual EA/IA processes in an effort to better understand those effects and develop measure to mitigate negative effects and enhance positive effects.
22.	Aroland First Nation (Chief)	We (Aroland First Nation) want to build a relationship with Marten Falls First Nation and we don't want to fight with our relations. Government is making us fight with our relations and it is confusing.	The proponents appreciate Aroland First Nation's desire to build a relationship and work together.
23.	Aroland First Nation (Chief)	Received texts from other First Nations about opting out of the Forum. We thought about opting out, but I wanted to be open and share my feelings, so we stayed at the Forum.	The proponents appreciates Aroland First Nation's participation in the ATRI Forum.
24.	Marten Falls First Nation	Marten Falls First Nation representative asked to respond to some of the comments made by the Aroland First Nation Chief.	Comment acknowledged.

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
25.	Marten Falls First Nation	Marten Falls First Nation representative noted that the Proponents have made every effort to meet and consult with Aroland First Nation, but this has been refused for a number of reasons including the COVID pandemic.	Comment acknowledged.
26.	Marten Falls First Nation	There are many ways to communicate, so the Marten Falls First Nation representative disagrees with the notion that the Proponent is not consulting. Issues should not be construed as an argument but rather debating.	Comment acknowledged.
27.	Marten Falls First Nation	Marten Falls First Nation representative recalled a story of a proposed forestry agreement between 3 First Nations that was stalled for more than a year. The Chiefs finally met to discuss and they were able to reach an agreement. There needs to be meetings with just the Chiefs. They did not have advisors and consultants back then. Chiefs need to get together and talk. That is why they are elected.	Comment acknowledged.

Aboriginal and Treaty Rights and/or Interests Forum
February 8, 2023 and February 9, 2023
Thunder Bay, Ontario
Webequie Supply Road Breakout Session – Webequie First Nation Comments/Responses

#	Comment/Issue by Webequie First Nation Community	Project Response at Meeting	Post Forum Response
1.	There are good catfish spawning grounds within the Webequie traditional territory. The catfish spawn in March.	Noted.	Comment acknowledged. The proponent is taking several baseline studies along with Indigenous Knowledge studies and input from communities to be considered in the EA/IA which will also consider monitoring programs and mitigation measures.
2.	Mental Health is an issue in the community. A lot of youth are feeling stuck in the community. The recent teen suicide in Nibinamik First Nation was a tragedy. All-season roads will provide community members more flexibility and cheaper options to leave the community.	Noted.	Comment acknowledged. A socio-economic study is included in the EA/IA process and the proponent will ensure this comment is noted.

#	Comment/Issue by Webequie First Nation Community	Project Response at Meeting	Post Forum Response
3.	Webequie needs to address how the IAAC Regional Assessment will consider community socio-economic improvements from the roads. The community needs revenues/funding to build infrastructure.	Noted.	Comment acknowledged. The WSR EA/IA process will consider socio-economic benefits as part of the effects assessment. The Proponent can relay your comments to IAAC for the Regional Assessment.
4.	Webequie continues to develop their governance systems. A well-being assessment has been done. The Community-Based Land Use Plan is in draft stage. The land use plan is important to be able to demonstrate how the community uses and plans to use their traditional lands. An Indigenous Knowledge study is going to be started. This is important to be able to demonstrate how the Webequie territories were and are traditionally used. The community is also currently developing a community skills and capacity inventory.	Noted.	Comment acknowledged. The proponent will be incorporating as much of this information as possible for the WSR EA/IA process.
5.	Webequie never signed the 1905 Treaty #9 or the 1929 Treaty #9 Adhesion. Webequie people were considered Fort Hope members. Webequie considers their land to be unceded. All they asked for was	Noted.	Comment acknowledged. The proponent will consider this information in the EA/IA process.

#	Comment/Issue by Webequie First Nation Community	Project Response at Meeting	Post Forum Response
	Kitiniganin -- “Garden land” – to be able to make the best use of the resources within their territory and be self-sufficient.		
6.	Webequie was the last community in the region to be assigned traplines. Got squeezed by the assignment of traplines to other Nations ahead of Webequie. It is important for Webequie to determine the history of the community’s land use prior to the assignment of traplines.	Noted.	Comment acknowledged. The proponent will consider this in the EA/IA process when noting community history.
7.	For many years the community was excluded from all the community planning and funding. There was no school until 1962; no nursing station until around 1966; airport was developed in 1977, and electricity came around the same time that the airport was built.	Noted.	Comment acknowledged. The proponent will note this as part of the socio-economic study report in the EA/IA process.
8.	Fred Jacob has conducted an extensive genealogical study and traced Webequie peoples’ use of land, including birth and burial sites, all the way up the Winisk River, and down to Neskantaga. Also the Jacob family (Fred’s great	Noted.	Comment acknowledged. The proponent will refer to information made available as part of the EA/IA process.

#	Comment/Issue by Webequie First Nation Community	Project Response at Meeting	Post Forum Response
	grandfather Shinobawa) came to Webequie by the Severn River.		
9.	Rivers have traditionally been the highways, and continue to be so today.	Noted.	Comment acknowledged and information will be incorporated into socio-economic study as well as the Indigenous Knowledge study.
10.	The Winisk provincial waterway park was established in 1976, overriding the previous designation as the Winisk Indian Guide Territory. Many restrictions were placed on the use of land within the Park. But despite restrictions placed on development, some white people built cabins without permission. All the bends down the river have names. They are sacred places.	Noted.	Comment acknowledged. Information shared about original place names and sacred areas will be incorporated throughout the EA/IA
11.	Webequie believes they have the inherent right to develop resources within their own traditional territory without interference from communities located far away. Webequie never got involved in discussions about the Victor Mine, but now Attawapiskat is intervening on their own supply road initiative. Communities need to support other communities that are trying to develop economic development	Noted.	Comment acknowledged. Inherent rights will be considered into the EA/IA reports and the final document.

Comment/Responses – Webequie First Nation

#	Comment/Issue by Webequie First Nation Community	Post Forum Response
1	Webequie First Nation Members fish and hunt in the Project Area (LSA/RSA). The river system in the ATRI LSA has spawning areas.	The proponent looks forward to learning more about Webequie First Nation's fishing and hunting activities in the region and knowledge on spawning areas through the Indigenous Knowledge/Indigenous Use of Land and Resources (IK/ILRU) Program.
2	Webequie First Nation Members hunt caribou in the Project Area (LSA/RSA)	The proponent looks forward to learning more about Webequie First Nation's caribou hunting activities in the region through the Indigenous Knowledge (IK) Program.
3	Webequie First Nation notes there could be potential impacts to caribou migration as a result of the Project(s). Impacts to migration could impact Webequie First Nation's ability to hunt in the Project area.	"The proponent plans to collect data on caribou migration and assess potential effects to migration (Section 7.3.5 of the ToR; Section 24.11 of the IPD). The proponent looks forward to learning more about Webequie First Nation's caribou hunting activities in the region through the Indigenous Knowledge (IK) Program. "
4	Traplines are a big topic within Indigenous Communities, but questioned whether people are still even trapping. There are less people trapping because of the cost of fuel to get out to areas. People do trap but not as regularly.	The proponent looks forward to learning more about Webequie First Nation's trapping activities in the region through the IK Program.

5	Increased road access could make it cheaper for trappers to access trapping areas.	The proponent acknowledges the project could open up trapping and make it easier to trap in the project area. This will be considered under the several Valued Components (Indigenous Use of Land and Resources, Wildlife and Wildlife Habitat,) during the EA/IA.
6	Webequie First Nation Members hunt geese in the Project Area (LSA/RSA). Hunting typically starts in the Spring and goes until the ice breaks and starts again in the Fall (Oct-Nov).	The proponent looks forward to learning more about Webequie First Nation's goose hunting activities in the region through the IK Program.
7	There are potential impacts to caribou migration as a result of the Project(s).	The proponent plans to collect data on caribou migration and assess potential effects to migration (Section 7.3.5 of the ToR; Section 24.11 of the IPD).
8	There is a threat of potential impacts to wildlife habitat from dust during both the construction and operation phases. Dust control especially at river crossings with bridges are needed.	The EA/IA will consider potential effects of dust on wildlife habitat and use of dust control measures to mitigate effects (Section 7.3.2.3 of the ToR; Section 24.8.1 of the IPD).
9	Family is important to Webequie First Nation because we have to look after one another.	The proponent looks forward to learning more about the importance of family to Webequie First Nation through the IK and Consultation and Engagement Programs. This would be considered under the Cultural Continuity and Well-being Valued Component.
10	The Project(s) could open up hunting and trapping in the area.	The proponent acknowledges the project could open up hunting and trapping in the project area. This will be considered under the several Valued Components (Indigenous Use of Land and Resources, Wildlife and Wildlife Habitat, Birds and Bird Habitat, and Species at Risk) during the EA/IA.

11	Concerns that the Project(s) could open up drugs, alcohol and human trafficking in the area and increase social issues because of substance abuse.	The proponent acknowledges that the Project has the potential to result in: access to drugs / alcohol; increased, social issues related to substance abuse; and human trafficking. The EA/IA will consider these potential effects and mitigation measures to address them, including the proposed mitigation of establishment of checkpoints.
12	The Project(s) will help to reduce the cost of living.	Comment acknowledged. The EA/IA will assess potential effects to cost of living (positive and negative) through the assessment under the Regional and Local Economy Valued Component (Section 7.4.1 of the ToR).
13	The Project(s) could help to bring housing to the communities by lowering the cost of building materials and accessing building supplies year-round.	Comment acknowledged. The EA/IA will assess potential effects to housing (positive and negative) under the Community Infrastructure and Services Valued Component (Section 7.4.3 of the ToR).
14	Hunting will be impacted if migration is impacted including waterfowl, bats, butterflies.	The EA/IA will consider mitigation measures to prevent impacts to migration of wildlife as applicable.
15	Webequie First Nation representative highlighted that there is a lot of hunting, fishing and trapping around the Webequie community (reserve lands). Caribou and wolverine are seen around the community (reserve).	The proponent looks forward to learning more about hunting, fishing and trapping around the Webequie First Nation and presence of Caribou and Wolverine through the IK Program.
16	Moose will go along the road which will make it easier for hunting. Representatives shared that moose get used to the noise and know how to avoid roads.	The proponent looks forward to learning more Webequie First Nation's knowledge on Moose through the IK Program.
17	Webequie First Nation has shared areas with Marten Falls First Nation.	Comment acknowledged.

18	The existing winter road goes through a beaver dam and flooding happens and the connecting roads open in December and the winter road opens in January.	The proponent looks forward to learning more about the condition of the existing winter road through the IK and Consultation and Engagement Programs.
19	Webequie First Nation Members used to travel all the way to Lake Nipigon for food and trade. There are not a lot of waterways connecting the eastern areas.	The proponent looks forward to learning more about Webequie First Nation's travels for food and trade through the IK Program.

Marten Falls First Nation Community Access Road
Comment/Responses – Webequie First Nation

#	Comment/Issue by Webequie First Nation	Post Forum Response
1	What Green Initiatives are being considered by the team during construction of the road?	Unfortunately, information on green initiatives is not available yet as we are in the early stages of the EA process, however, they can be shared with you as they become available.
2	Why is the road split up in various segments instead of being considered as one?	While planning for all three road projects is on-going, the Marten Falls First Nation Community Access Road is a separate project from both the Northern Road Link and Webequie Supply Road projects. All three projects have a different primary purpose (i.e., the MFFN CAR is to provide year round community access to Marten Falls First Nation) and each project has a different proponent and thus different engineering consulting firms providing technical support to the proponents. The MFFN CAR Project is subject to the Ontario EA process and a federal Impact Assessment. As such, both the provincial and federal governments are involved in the Project.
3	They expressed interest in having one consistent team for all three roads for data consistency.	Comment acknowledged.
4	Noted the importance of the trap line system in the area, which will require some additional discussions with community members.	Comment acknowledged.

June 1, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Proposed Criteria and Indicators for Evaluation of Alternatives for Supporting Infrastructure.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Tuesday, June 6th, 2023 at 12:00pm – 1:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

The livestreaming event is scheduled on the same day as the above radio show at **2:00pm – 2:30pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Virtual Information Sessions for Round 2 Part 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

WEBEQUIE SUPPLY ROAD
COMMUNITY MEETING
IKLRU Program
Webequie First Nation
June 7, 2023

OVERVIEW

Michael Fox and Heather Swan of Indigenous and Community Engagement (ICE), and Tony McGuire of TheyMedia went to Webequie First Nation (WFN) to discuss Indigenous Knowledge. The purpose of the visit was to gather Anishiniimowin Knowledge from Elders, in order to understand unique knowledge systems, practices, and beliefs developed by Indigenous communities over generations. The meeting had approximately 17 participants. Fred Jacob provided translation services.

June 14, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Proposed Aggregate / Rock Source Areas.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, June 20th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.
On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

July 26, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has been conducting virtual information sessions for each community with the second part of the presentation for Consultation Round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Stay Up to Date

You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

The WSR Project also has a YouTube channel where we post informational videos, past livestreams and radio shows, and communication materials. Please visit:
https://www.youtube.com/channel/UCh_heAjQoY2hPBPMr68MCzw

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.

QUESTIONNAIRE

NAME OF INTERVIEWEE: _____

DATE OF BIRTH: _____**PLACE OF BIRTH**:_____

REGISTERED TRAPLINE AREA #: _____

DATE OF INTERVIEW: _____

LOCATION: _____ **BASE MAP #:** _____

INTERVIEWED BY: _____

1. Have you heard about the traditional land use and knowledge study that we are working on?

   If yes, discuss the project and how important it is. If not, you should explain the project in more detail and answer any questions he/she may have.

_____
_____
_____

2. With your permission, I wish to conduct an interview with yourself/your family about your family's history in relation to the land, water, and wildlife. It is very important on us to hear your stories and knowledge of the area. So we could document what you know.

_____
_____
_____

3. With your permission, we will record/videotape your answers/information and ask you to point out different locations on the maps that I have brought. Is it all right to take a picture of you for use in our report?

WEBEQUIE FIRST NATION
Community Based Land Use Planning

_____
_____
_____

1. Personal and Sensitive

How long have your family lived in this area?

_____
_____

Where were you born?

_____
_____

Do you remember where your parents and grandparents were born?

_____
_____

2. Trapping and Snaring

Do you still trap? _____

Why did you stop? _____

Is there a family trapper cabin in your trapline? (Mark on map)

_____

What areas did you use and do you use now for trapping and snaring?
(Mark on map)

_____
_____
_____
_____

Is there an area that you want to see protected and why? (Mark on map)

_____
_____
_____
_____

2

WEBEQUIE FIRST NATION
Community Based Land Use Planning

What species did/do you trap in these areas? And when?

1. Early Fall to and Early Freeze-up
2. After Freeze-up and Early Winter
3. During Winter
4. Early Spring to and During Early Spring
5. After Break-up to Late Spring
6. Summer to late Summer

Species	Times					
Wolves	1	2	3	4	5	6
Wolverines	1	2	3	4	5	6

WEBEQUIE SUPPLY ROAD
INDIGENOUS KNOWLEDGE INTERVIEWS

Webequie First Nation
August 29th – 31st, 2023

OVERVIEW

The Webequie Supply Road Project Team conducted Indigenous Knowledge interviews with Elders and Land Users, focusing on governance.

Groups of two or more were interviewed at a time over the course of day and half. In total, 18 people were interviewed. TheyMedia recorded the interviews.

Sample questions included:

1. How do you govern the areas in your Homelands (i.e., protocols around sustainable harvesting)?
2. How was this historically done?
3. I understand that some people have their dodems – or clans – has that been a way of governance for community or families?
4. Information on family structures and relationships between families sought.
5. Before the traplines were established in Ontario, how was business conducted between families?
6. During Treaty time, how did the people talk with each other to decide to sign the Treaty?
7. Before the traplines and before the Treaty – do you know how families in different areas talked with each other and what would have been their business to talk about?
8. How is knowledge passed down? What kind?
9. Having talked with people in the community, culture is being reclaimed – what kind of effect do you think this has had on the governance of the community?
10. Is there any other information you would like to share with us?
11. Are there any sites of great family significance or places were families met?
12. Has climate change affected your way of life?
13. How does the community communicate now when it comes to changes on the land and keeping community safe?

SUMMARY

Before traplines, families were spread across a large area, and not necessarily in a 'community' setting. However, they did visit the area for purposes of trade. Each family had their own areas, and shared territories if game was scarce. When children grew up, they branched out.

Principles of sustainability was and continues to be built into culture and is a part of Natural Law. Understanding of this was passed down through generations. For instance, over-harvesting was frowned upon, and resulted in a deficit which created hardship for all.

There was an awareness that families were a part of a dodem (clan); however, due to the effects of Indian Residential School, some of this was lost and is currently being reclaimed.

Men and women had their respective roles. Men went out and did the hunting and trapping while the women looked after their homes and children.

Currently, people maintain their traplines, which are registered. The system was implemented in the 1940s. Typically, trapline areas are not trespassed upon by others. There used to be a harvesting quota and people relied on this economy; however, the prices for furs dropped and the price of gas has significantly increased.

Fishing and hunting areas, however, have not been treated the same as traplines, and there are no formal agreements between families. The team was told that people have set up and continue to set up gill nets where they know there are good fish populations.

Youth in the community have been very active on land and have expressed interest in the project and sharing information.

ISSUES AND CONCERNS

Climate change

- Winters aren't as cold as they used to be. Ice conditions can be unsafe because there isn't as much blue ice as there used to be. Safety is a concern.

Training

- It was mentioned that although there is a lot of consultations with respect to the road and other areas, training has not yet been set up for those who want to enter a local job force.

Information

- Two community members mentioned that it would be good if there was more information getting into the hands of all community members.

NEXT STEPS

There needs to be a focus on Natural Law. The Impact Assessment process requires some information on Natural Law and Governance for the regulator.

WEBEQUIE SUPPLY ROAD
COMMUNITY INFORMATION SESSION
AND DATA COLLECTION EXERCISE

Webequie First Nation
September 25, 2023

COMMUNITY INFORMATION SESSION

The Webequie Supply Road (WSR) Project Team conducted a community open house for members of Webequie First Nation at the community hall. A total of 34 Webequie First Nation community members attended the open house. The WSR Consultation Round 2 Part 2 presentation entitled *Evaluation of Alternative Supporting Infrastructure and Road Design* was delivered by Don Parkinson of AtkinsRealis and a question and answer period followed.

Information packages consisting of the presentation slides were made available to community members as handouts. Questions and comments about the Project were received from the membership and fielded by Don Parkinson. Comments received were consistent with previous engagement exercises and reflected below.

DATA COLLECTION

After the presentation to community members, a Indigenous Knowledge data collection exercise with a group of six community members in the age range of 40-55 was conducted. Maps of the project area were made available, and data was collected in the project study. Comments were made about the increasing trend of women accessing the land for hunting, fishing and other harvesting purposes. Community members expressed that relationships with neighbouring community members such as Nibinamik have been maintained but some concerns were mentioned about potential over-harvesting practices by some members of neighbouring communities.

ISSUES, CONCERNS AND COMMENTS

- Aggregate resources – rehabilitation of closed pits and quarries and the possibility of generating revenue for the community through the supply of aggregate used for road construction and maintenance

- Outside people accessing WFN traditional territory after WSR construction, potentially impacting fish and wildlife populations
- Training opportunities for youth to allow them to participate in WSR construction and associated environmental monitoring activities
- Increased access to drugs and alcohol after road construction
- Climate change
- Community control over WSR road access

NEXT STEPS

- Upcoming Consultation Round 2 Open House/Public Information Centre (PIC) on October 3 and 4 in Thunder Bay and October 12 in Timmins

November 8, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience and in any method that you and your community prefer.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time, some communities may not wish to participate in the form of in-person meetings and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person engagement methods. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Public Information Center #2

The WSR Project team held Public Information Center (PIC) #2 in Thunder Bay on October 3rd for Indigenous communities & 4th for the general public and Timmins on October 12th for the general public. The PIC's were held to provide interested parties with an opportunity to learn about the ongoing assessment of alternatives that is being conducted as part of the EA/IA study and provide feedback. The PIC consisted of a presentation and an informal drop-in center with display information about the Project. Project team representatives shared information on the EA/IA process, studies being conducted, criteria for evaluation of route alternatives and alternative locations for supportive infrastructure (e.g., aggregate source areas, construction camps), including results from the assessment, the feedback we have heard to date, and future consultation and engagement opportunities.

If you were unable to attend the PIC #2, you can find the formal notice, livestream, more information on the study and progress, and updates on our project website: https://www.supplyroad.ca/

Aboriginal and/or Treaty Rights and Interests Forum

Building on the momentum of the first Aboriginal and / or Treaty Rights and Interests Forum in February 2023, Webequie First Nation and Marten Falls First Nation encourage you to participate in a follow-up Forum on November 21-23, 2023 at the Valhalla Inn in Thunder Bay, to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link, and Marten Falls Community Access Roads Projects.

The Purpose of this Forum is to create a respectful, culturally sensitive, and collaborative space to develop and/or confirm our understanding of the Project areas (WSR, MFCAR, and NRL) as your Aboriginal and / or Treaty Rights and Interests may be impacts by these Projects. Please note the purpose of this event is to discuss Aboriginal and / or Treaty Rights and Interests and not to collect Indigenous Knowledge.

If you have any questions regarding the Forum or need additional information to engage your community, please do not hesitate to reach out to us at the contacts below.

Stay Up to Date

OTHER ROAD PROJECTS IN THE AREA

PURPOSE OF THE WEBEQUIE SUPPLY ROAD

Move materials, supplies and people from the Webequie Airport to the McFaulds Lake area

Provide local employment and economic development opportunities to Webequie.

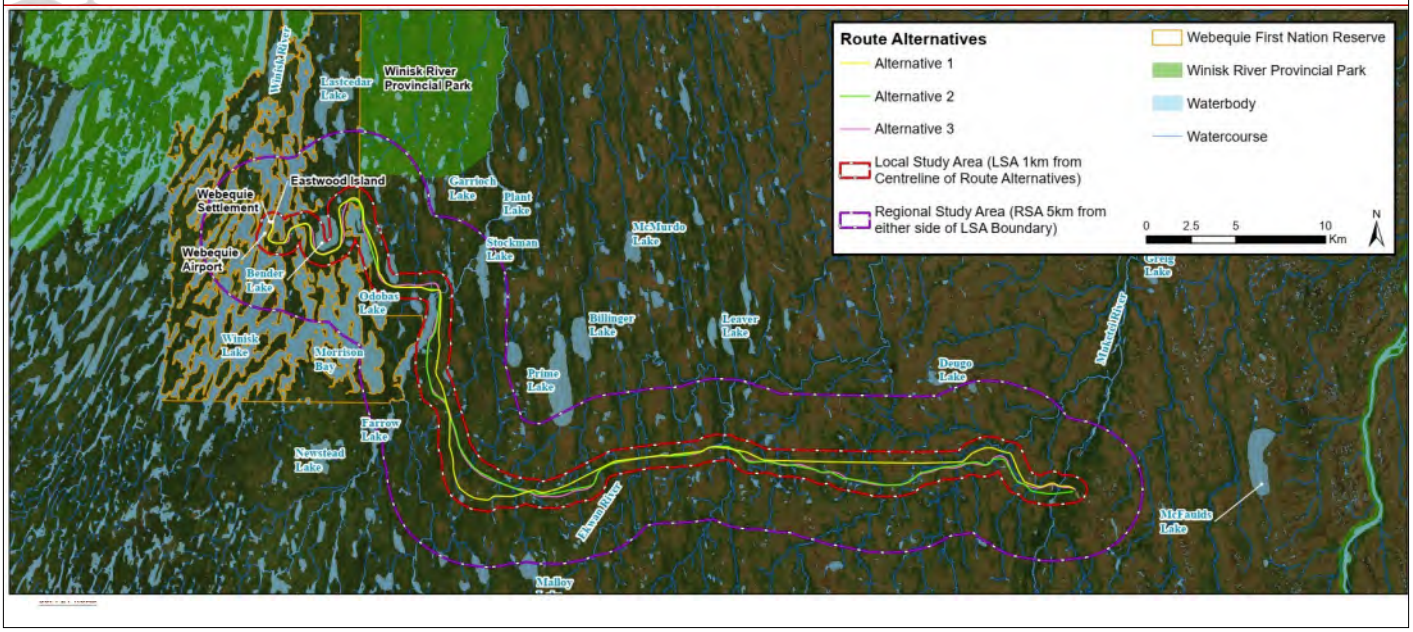
Provide experience/training opportunities for youth to help encourage the pursuit of additional skills through post-secondary education

Consultation Round 2 (March-October 2023)- *Who We Heard From*

All 22 Indigenous communities were offered a full suite of engagement options, including in-person community meetings, drop-in sessions, local radio shows and teleconferences.

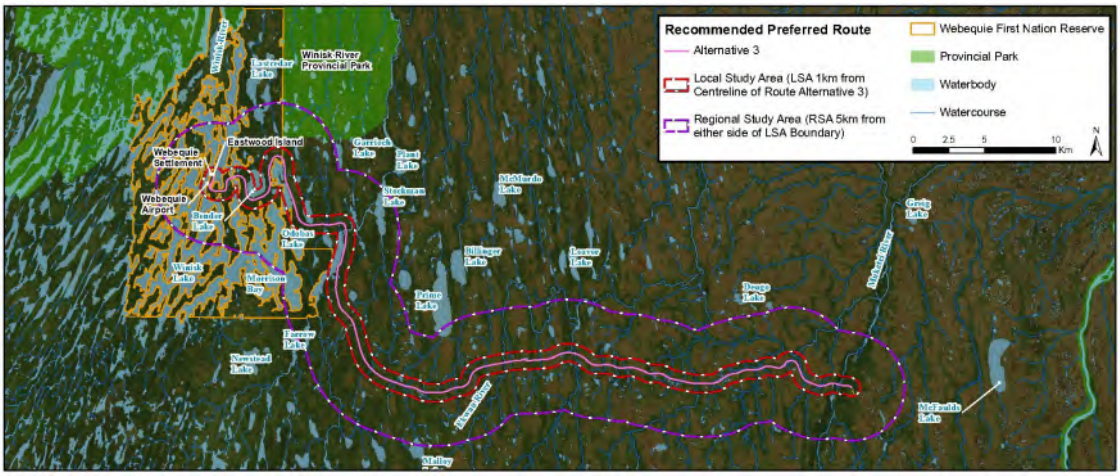
In addition to these offerings, virtual community sessions were scheduled for each community on specific dates. These scheduled virtual community meetings were promoted via social media and were accompanied by invitation emails sent two weeks prior to the event.

ALTERNATIVE ROUTES IN THE PREFERRED CORRIDOR



RECOMMENDED PREFERRED ROUTE

Based on the evaluation of 3 alternatives routes using a multi-factor analysis, Alternative Route 3 is recommended as the preferred alternative for the WSR

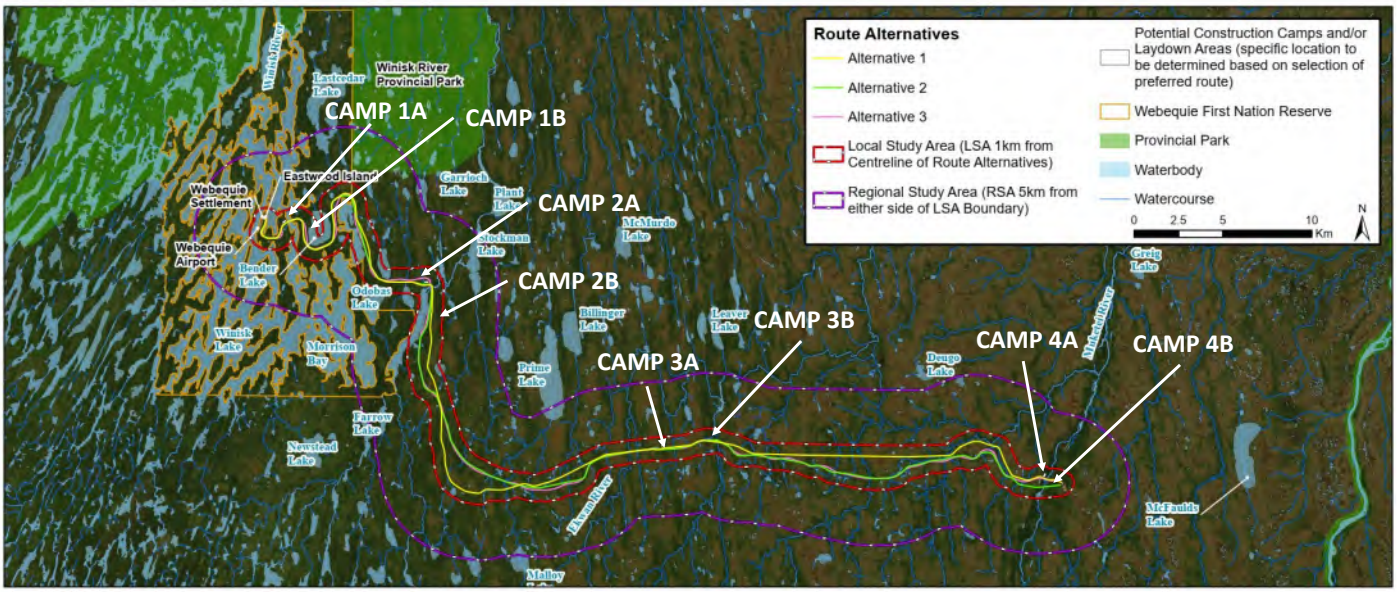


ALTERNATIVES FOR SUPPORTIVE INFRASTRUCTURE

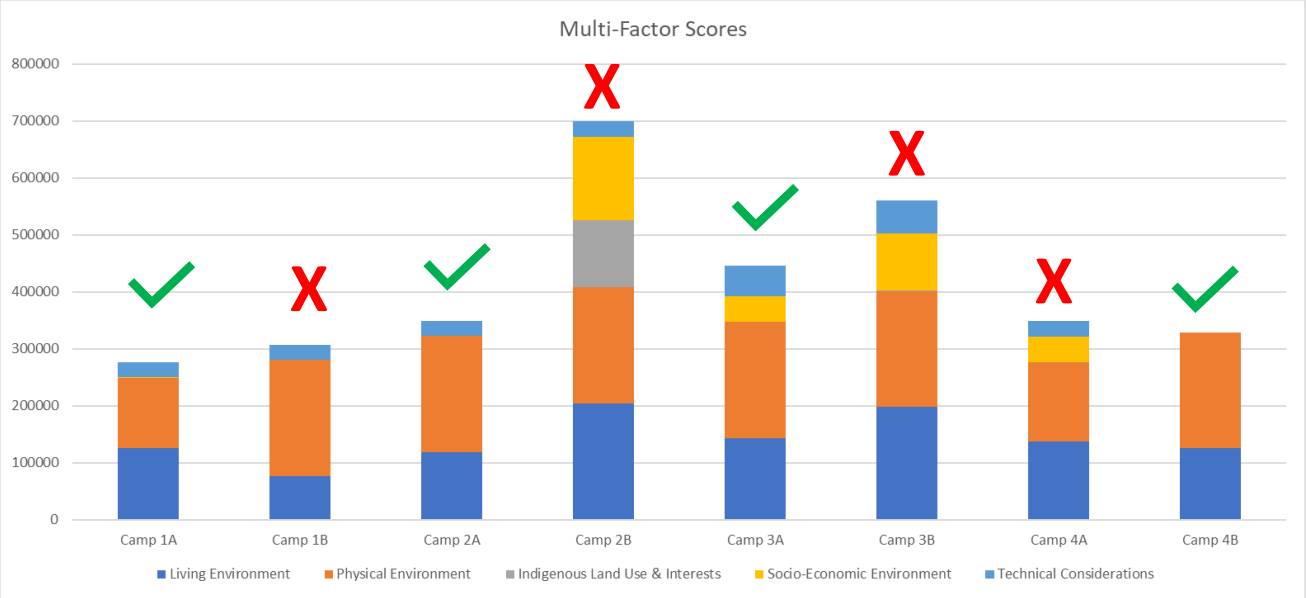
The evaluation of alternative locations for supportive infrastructure includes

- Aggregate/Rock Source Areas (Pits/Quarries)
- Access Roads
- Construction Camps with Storage/Laydown Areas for Equipment & Materials

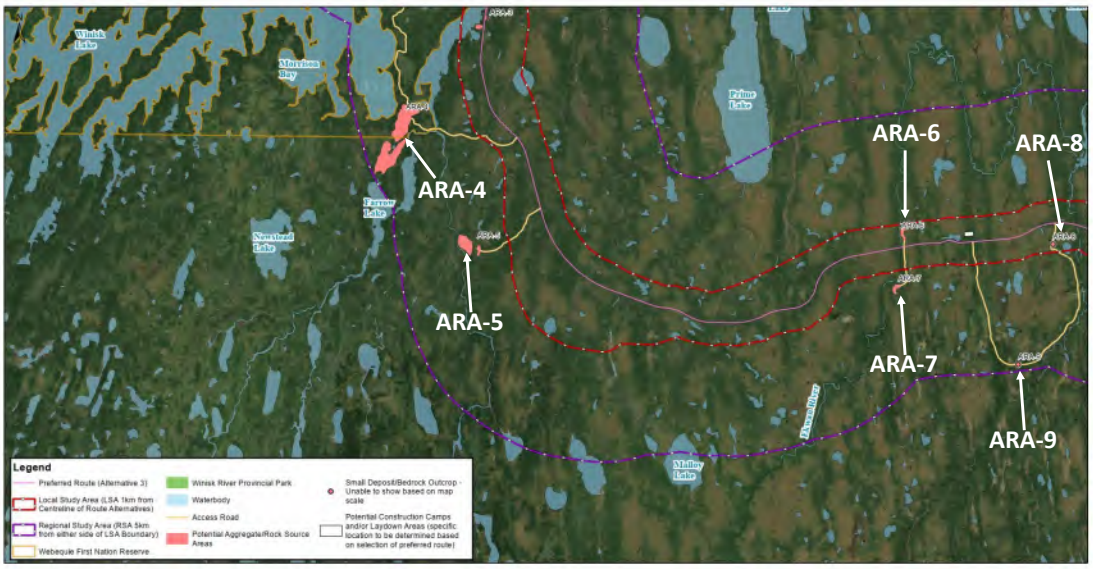
POTENTIAL CONSTRUCTION CAMP LOCATIONS



ALTERNATIVE CAMP AREAS (RESULTS)



POTENTIAL AGGREGATE SOURCE AREAS (WEST-CENTRAL)

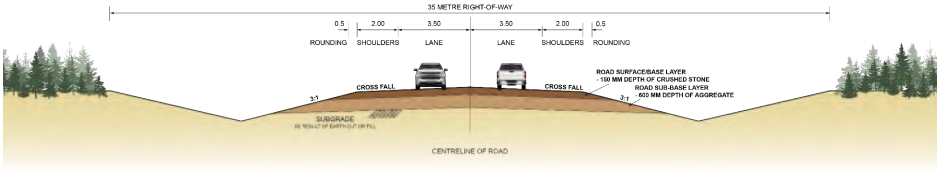


ALTERNATIVE AGGREGATE SOURCE AREAS (RESULTS)

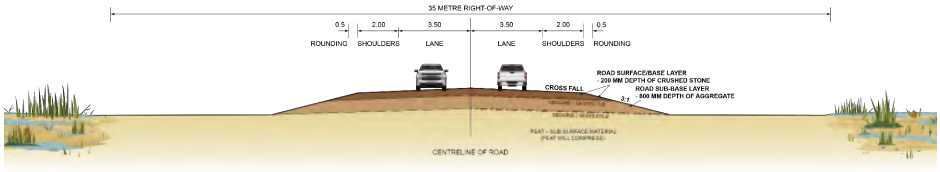
Option	Meets Quantity	Ability to Access	Proximity to Start of Construction (Webequie)	Long-term Source of Aggregates	Multi-Factor Score Ranking	Overall Rank
Option 1 - ARA-3 and ARA-4	YES	ARA-3 requires minimal access ARA-4 requires significant access road/bridge	NO	SCREENED OUT BECAUSE TOO FAR FROM WEBEQUIE COMMUNITY (CONSTRUCTION START)	SCREENED OUT BECAUSE TOO FAR FROM WEBEQUIE COMMUNITY (CONSTRUCTION START)	SCREENED OUT BECAUSE TOO FAR FROM WEBEQUIE COMMUNITY (CONSTRUCTION START)
Option 2 - ARA-2 and ARA-4	YES	ARA-2 requires minimal access ARA-4 requires significant access road/bridge	YES - ARA-2	YES - ARA-4	Lower	RANK 1
Option 3 - ARA-2, ARA-3 and ARA-4	YES	ARA-2 and ARA-3 requires minimal access ARA-4 requires significant access road/bridge	YES - ARA-2 and ARA-3	YES - ARA-4	Higher	RANK 2
Option 4 - ARA-4 only	YES	ARA-4 requires significant access road/bridge	NO	SCREENED OUT BECAUSE TOO FAR FROM WEBEQUIE COMMUNITY (CONSTRUCTION START)	SCREENED OUT BECAUSE TOO FAR FROM WEBEQUIE COMMUNITY (CONSTRUCTION START)	SCREENED OUT BECAUSE TOO FAR FROM WEBEQUIE COMMUNITY (CONSTRUCTION START)

ROAD FOUNDATION DESIGN

The road will have a surface layer/base layer and sub-base layer with various size of gravel/aggregate for each layer



WEBEQUIE SUPPLY ROAD
UPLAND AREA (NORTH-SOUTH SECTION)
ALL DIMENSION ARE IN METRES



WEBEQUIE SUPPLY ROAD
LOWLAND AREA (EAST-WEST SECTION)
ALL DIMENSION ARE IN METRES

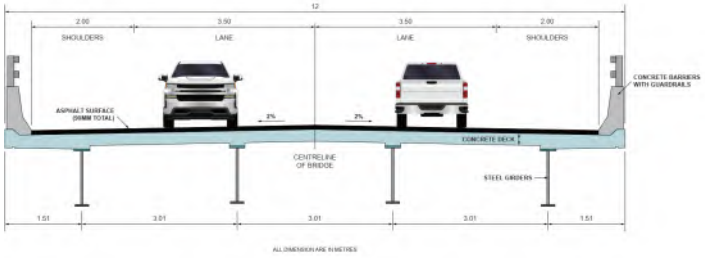
WSR
WEBEQUIE
SUPPLY ROAD

WATERCOURSE CROSSINGS - BRIDGES

The type of bridge proposed at 5 water crossings is a Composite Steel-Concrete Bridge

- Consists of foundations, abutments and piers that support steel girders, concrete deck and side barrier walls

Typical bridge proposed for WSR



View of Bridge Deck

WINISK LAKE CROSSING

BEFORE

AFTER

NEXT STEPS

WE ARE HERE NOW

- Consultation Round 2 - Receive feedback to finalize evaluation of alternatives and selection of preferred route and location of supportive infrastructure
- Continue efforts to finalize baseline studies
- Continue efforts to receive Indigenous Knowledge and Land and Resource Use Information

WINTER/SUMMER 2024

Round 3 will focus on the findings of the preliminary effects assessment, including mitigation and follow-up monitoring programs, and will include information such as:

- Results of Rounds 1 and 2– what we heard and how we addressed comments/concerns
- Preliminary effects analyses, including cumulative effects
- Proposed environmental protection measures and mitigations; and recommended follow-up/monitoring programs

› Next steps in EA/IA process

WINTER 2025/ SPRING 2026

- Review of Draft and Final EAR / IS

WEBEQUIE SUPPLY ROAD
COMMUNITY INFORMATION SESSION

Webequie First Nation
January 12, 2024

COMMUNITY INFORMATION SESSION

The Webequie Supply Road (WSR) Project Team conducted a community project update meeting for members of Webequie First Nation at community hall. A total of 35 Webequie First Nation community members including Chief Wabasse and members of the Council attended the community meeting. A WSR project update presentation was delivered by Don Parkinson of AtkinsRealis and a question and answer period followed. Particular emphasis was made on progress to date and upcoming activities as the project moves into the later stages of the environmental/impact assessment and advanced design stages. Questions and comments received are reflected below.

ISSUES, CONCERNS AND COMMENTS

- A number of comments reflected support for the project and identified the importance of maintaining project momentum through the initiation of training opportunities and other preparatory activities as the project moves toward an eventual decision on the environmental assessment and advanced design.

NEXT STEPS

- The WSR Project Team committed to returning in February/March to present the findings of the Draft WSR Health Impact Assessment
- Upcoming presentation to community in spring/summer as part of Consultation Round 3 *Preliminary Effects Assessment, Mitigation and Monitoring*

SUPPLY ROAD

January 25, 2024

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON P0T 3A0

Re: Round 2 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Wabasse:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR or the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report 2 (electronic and hard copy), which summarizes and documents Round 2 of the Engagement and Consultation Program with your community for your review and comment.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1;
- Overview of results of baseline studies to characterize existing conditions within the study area;

- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/ rock source areas, construction camps, access roads) from multifactor analysis, including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design); and
- Next steps and schedule.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report 2, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 2;
- Summary of preliminary effects assessment of the Project, including cumulative effects;
- Proposed impact management, mitigation and follow-up monitoring program; and
- Next steps in EA/IA process.

We welcome any feedback and input your community may have on the attached Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

Regional Consultation Lead
Webequie Supply Road

2

January 31, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week with changes to the order of topics that was provided on the January 2024 newsletter. See below the updated schedule of topics for February 2024:

Date	Topic
Monday, February 5, 2024	Road Access and Control Issues
Monday, February 12, 2024	Minimizing Project Impacts
Tuesday, February 20, 2024	Construction Camps and Other Opportunities
Monday, February 26, 2024	Bridges and Water Crossings

The topic of the upcoming session is: **WSR Presents: Road Access and Control Issues.**

The livestreaming event is scheduled for **February 5th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date

1. Project Context

The proposed Webequie Supply Road (WSR, or 'the Project') is a proposed new all-season road approximately 107 kilometres (km) in length from the Webequie First Nation Reserve to the mineral deposit area near McFaulds Lake (also referred to as the Ring of Fire). The Project location is shown on Figure 1-1. The preliminary corridor for the road consists of a northwest-southeast segment running 51 km from the Webequie First Nation Reserve to a 56 km segment running east-west before terminating near McFaulds Lake. A total of 17 km of the corridor is within the Webequie First Nation Reserve.

The information provided in this document is preliminary at this time, and it has been prepared with information that is known specifically for Webequie First Nation This is a living draft document that has yet to be reviewed and validated by the Community. Information on existing conditions is used to provide a baseline understanding of the valued components of the community. Potential effects of the Project on valued components will be assessed by comparing baseline conditions to those expected to result from the construction and operation and maintenance of the Project.

Webequie First Nation is the proponent for the Project. The Project Team led by Webequie First Nation is striving to gather as much Anishinaabemowin/Anishinaabe/Mushkegowuk (Cree) Indigenous Knowledge as it relates to the Project and to help inform the Socio-Economic Baseline. This document will be continuously updated when information from the Webequie First Nation and other communities is shared with the Project Team.

The gathering of important Indigenous Knowledge takes time due to the limited resources of communities as well as following culturally relevant protocols, which require relationship-building and consistency to establish trust.

Webequie is an Anishinaabemowin (Oji-Cree) Tawin (community) in Treaty No. 9 territory, located about 540 km north of the City of Thunder Bay. Anishinaabemowin is a blend of Anishinaabe (Ojibway) and Mushkegowuk (James Bay Cree).

Before the first settlers arrived, the Anishinaabe and Mushkegowuk sustainably shared the territory and lived Mino Bimaadzwin (The good life) through guidance from Anishinaabe law, which governs their Kii'manitu'meano-goonan (Creator given) responsibilities to assure a good relationship with the Land (Webequie First Nation, 2021).

Generally, the Anishinaabe and Mushkegowuk shared a common spiritual view with Indigenous Nations across the continent, and that is based on a profound respect for Shkagamik-Kwe (Mother Earth), which was also a relationship based on reciprocity (Thomas, 2020; Helin, 2008).

As the proponent for the Project, Webequie like many Indigenous Nations and communities across Turtle Island (North America) have been living with the effects of colonial impositions since the arrival of Europeans to the continent and the formation of Canada. The impositions, spanning more than seven generations have had a reverberating impact on the Anishinaabemowin. These impacts should be understood while considering 'baseline' Socio-Economic data because Webequie, the proponent for the Project, has been striving for Mino Bimaadzwin and to strengthen their Nation in a holistic way while reclaiming culture which feeds into baseline data as well as Aboriginal and Treaty Rights and Interests.

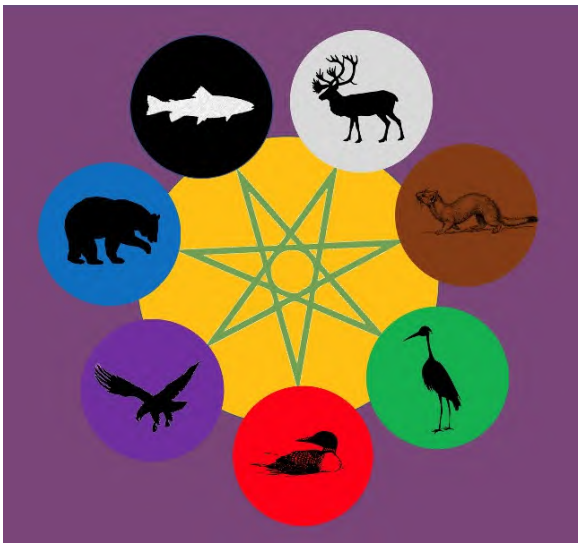
WEBEQUIE SUPPLY ROAD
NOTES
DISCLAIMER

Before settlers arrived, Indigenous Nations governed themselves through their own governance structures and natural laws. Anishinabek and Mushkegowuk governed themselves through a clan-style system, as shown on Figure 1-2.

Typically, the Anishinabek govern themselves through a clan-system which includes seven main clans with many sub-clans. Each clan has different responsibilities within the Nation at large.

Figure 1-2: Representation of the Anishinabek Dodemag (the "Clan-System")



Source: Atikameksheng Anishnawbek, 2023.

Colonial impacts have been devastating in Anishinaabe and Mushkegowuk Homelands. Before the Hudson Bay Company (HBC) set up shop and exploited fur-bearing animals to support trade in Europe, the people lived sustainably with the Land. Fur-bearing animals were hunted to near extinction, with the beaver population having been nearly decimated, which resulted in starvation mode for the people living in their homelands. (SNC-Lavalin, 2022). Before that time, Anishinaabemowin had never before been subject to a commerce style economy (SNC-Lavalin, 2022).

The *Indian Act*, implemented in 1876 had an adverse impact on Indigenous Peoples across Canada. Perhaps the most harm was done while Indigenous children were forced to attend Indian Residential Schools, which were either government run, or church run institutions.

A timeline has been developed to better understand the effects of legislation, encroachment on rights as well as reconciliation efforts, as shown in Table 1-1.

Table 1-1: Timeline of Effects on Indigenous Peoples of Canada from Legislation, Encroachment on Rights and Reconciliation Efforts

Timeline	Effects
Hudson Bay Company, 1670	The HBC, officially established itself in 1670 to set up trade for the fur industry (primarily beaver pelts). HBC set up its first official post in 1673 in Moose Factory, near the southern hub of James Bay and subsequently built a small outpost along the Albany River in 1743. The exploitation of animals for fur in the region resulted in a

Timeline	Effects
	starvation crisis for the Anishinaabe and Mushkegowuk. It took the beaver population a considerable time to recover (SNC-Lavalin, 2022).
British North America Act, 1867	The *British North America Act* made the federal government responsible for Indigenous Peoples (Government of Canada, 2011).
Royal Proclamation, 1763	Established constitutional basis for future negotiations of treaties and confirmed the protection of lands for the exclusive use by Indigenous Peoples (Hall, 2019).
Indian Act, 1876	Imposed the Reserve system 1876 – ongoing. Forced attendance at Indian Residential Schools 1894 – 1996. Outlawed ceremonies: 1876 – 1951. Oppressed women's rights: 1876 – ongoing. Imposed the band council system 1876 – ongoing. 60's Scoop – Gave provinces jurisdiction to 'scoop' Indigenous children from their homes. There have been class action lawsuits to address the loss of culture and identity.
James Bay Treaty (Treaty No. 9), 1905	Signed treaties with Anishinaabe, Mushkegowuk, and Anishinaabemowin. Indigenous Peoples in the territory wanted protections for lands, resources and fur-bearing animals.
The Mines Act, 1906	Established staking and prospectors' licenses for exclusive rights to stake and work upon Crown lands.
Ontario Registered Trapline System, 1946	Imposed sole ownership of trapping areas, which did not align with cultural values (SNC-Lavalin, 2022).
Royal Commission on Aboriginal Peoples, 1996	Mandated to investigate and propose solutions to the challenges affecting the relationship between Aboriginal Peoples, the Canadian government, and Canadian Society.
Truth and Reconciliation Commission of Canada, 2015	Final Report, Calls to Action, Indian Residential School settlement agreement (Truth and Reconciliation Commission of Canada, 2015).
National Inquiry into Missing and Murdered Indigenous Women and Girls, 2019	Reclaiming Power and Place: The Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls (MMIWG, 2019).

It is important to tell the story of Indigenous Nations in order to understand how they have arrived at their current Socio-Economic conditions and Indigenous Knowledge. Part of that story includes not only the history of the Indigenous Nations, but also that of Indigenous Peoples in Canada.

COMMUNITY SETTING

AtkinsRéalis - Confidential

2. Community Setting

2.1 Community Overview

The Webequie First Nation is a fly-in Anishinaabemowin (Oji-Cree) community located in Treaty No. 9 territory in Northwestern Ontario, approximately 525 km northeast of the City of Thunder Bay. The community is located on the northern peninsula of Eastwood Island on Winisk Lake in the upper reaches of the Winisk River. The community is the Proponent of the WSR Project and is undertaking the Environmental Assessment (EA)/ Impact Assessment (IA) to identify and assess the potential effects of the Project, and to identify measures to mitigate impacts and to optimize benefits, as part of regulatory approvals for the all-season road.

Webequie First Nation's homeland makes up part of the traditional Oji-Cree territories that are located in the central expanse of Northern Ontario. The traditional language spoken in Webequie is Oji-Cree, a dialect of Anishinaabe with influences from the Cree language and is considered a distinct language and culture (CBC, 2023a).

Webequie First Nation is an Ojibway word with the meaning "shaking head from side to side". The community received the name many years ago and has a special meaning to its people (Webequie First Nation, 2023a). According to the community the origin is as follows (Webequie First Nation, 2023a):

> "The story goes, that early one morning a long time ago, a community member was paddling his canoe out onto the lake. He noticed a family of mergansers attempting to take flight and running across the calm surface. It was a very calm day, and there was no wind to help them get airborne. In their frantic attempt to get some lift, the man observed they were shaking their heads from side to side, looking for a breeze. This is how our name originated, and why we have a merganser as part of our community logo".

Webequie First Nation is a Nishnawbe Aski Nation (Treaty No. 9) First Nation (Nishnawbe Aski Nation, 2023). Treaty No. 9 was first signed in 1905-1906 and adhesions signed in 1929-1930. At the time, the Crown included clans representing the Webequie community with the Eabametoong First Nation (Fort Hope Band) (Archaeological Services Inc., 2021). In the post-Treaty years, Webequie First Nation was not recognized as having Band status until 1985 when this was received from the federal government. In 2001, the community finally received its current reserve status.

Webequie First Nation is self-described as a growing community, with a Registered Population of 976 (CIRNAC, 2023a), including 821 registered on-reserve land. As noted, it is a fly-in community, with no spring, summer, or fall road access. The Webequie First Nation is currently serviced by an all-season Visual Flight Rules (VFR) airport, and a winter road, which branches off the Northern Ontario Resource Trail (NORT), 250 km northeast of the Township of Pickle Lake, providing road access for only a brief period in the winter months. First Nation fly-in communities have observed that winter road seasons are getting shorter, and this is a major concern for shipping in supplies (CBC, 2023b).

Surrounded by the Winisk Lake on the northern peninsula of Eastwood Island, the community is situated with residences along a main road that loops around the centrally located Band administration building and Band hall, the Simon Jacob Education Centre and the Webequie Business Centre, which hosts amenities and services. Additional supporting infrastructure provides power, waste and water facilities, located adjacent to the community on Eastwood Island.

Webequie First Nation indicates it has inherent right to self-governance and self-determination (Webequie First Nation, 2023b). First Nations such as Webequie have elected local governance. The elected Chief and Councillors are the recognized political representatives and leadership of the community. Webequie is committed to preserving its freedom, to live their lives as they choose, and to be proud of its heritage, and the strong and thriving community that has been built (Webequie First Nation, 2023b).

Webequie First Nation has a Custom Electoral System, with one Chief, one Head Councillor and five Councillors elected every two years (CIRNAC, 2023a). Custom election processes follow community's election code that provides the rules under which Chiefs and Councillors are chosen for those First Nations who are not under the *Indian Act* election rules. These codes are often unique to the specific community (ISC, 2023a). The next election will be in February 2024.

Webequie First Nation has a rich history of close relations and family ties with neighbouring communities. The community is formally affiliated with political territorial organizations with common goals and interests. Webequie First Nation also has formal relationships with:

- Nishnawbe Aski Nation;
- Matawa First Nations; and
- Chiefs of Ontario.

2.2 Community History

The people of Webequie First Nation are among the descendants of the original peoples that have inhabited lands and waters within the Hudson Plains and Boreal Shield ecoregions of Canada (AAFC, 2023), where the proposed Project will be situated. Today, this region lies within the approximately northern third of the province of Ontario ("Northern Ontario"). The Webequie peoples (Webequie Inninuwuk) have lived according to their Anishinaabe and Cree customs and beliefs and practiced their way of life within their traditional territories for countless generations (Webequie First Nation, 2021).

Throughout generations, it is understood that the Webequie peoples, and peoples of other neighbouring First Nations, were traditionally mobile people, sustainably utilizing the regions by land and water, according to the seasons, and traditional hunting, fishing, trapping, gathering, meeting and trading places, and other social, cultural and spiritual customs (Archaeological Services Inc., 2021).

Trading with Europeans occurred initially at the mouth of the Albany River at the HBC post and to the south with the Northwest Company post at Fort William. Later, HBC controlled inland posts, and families in the area tended to settle near the posts (Archaeological Services Inc., 2021).

The arrival of Europeans created changes for Indigenous Nations. Following the establishment of Euro-Canadian colonial systems, changes were imposed on the generations that followed including completion of the Canadian-Pacific Railway in 1885, which provided Euro-Canadian settlers increased access to the lands and waters in the north, and led to increased mineral prospecting, threatened hunting and trapping resources, along with sickness and hunger (Ministry of Public and Business Delivery Service, 2023). It was under these conditions that the James Bay Treaty (Treaty No. 9) was signed in 1905 (plus the 1929 adhesion) as an agreement between the Ojibway (Anishinaabe), the Cree (including Mushkegowuk) and the Crown (represented by Canada and Ontario). Around this time, the Webequie community settled on Eastwood Island on Winisk Lake in Northern Ontario. This location was originally a summer gathering site for family groups that lived in and used the broad surrounding area throughout the year, as it was known throughout the region to be an excellent hunting and fishing area (Webequie First Nation, 2021).

The decision was made by Webequie Elders and families from all directions in the area, and through traditional knowledge and spiritual guidance, that the Eastwood Island community settlement location was identified as a place for the community to live together. This area, and the decision made by the community represents the core of Webequie's Three-Tier Model (Webequie First Nation, 2021).

According to interviews with Webequie First Nation community members, "when other people arrived in this area, they made mistakes about who the Webequie Inninuwuk were. During the Treaty No. 9 process, Treaty Commissioners wrongly assumed that the people of Webequie belonged to the community of Eabametoong First Nation (known at the time as the Fort Hope Indian Band), located approximately 160 km to the southeast of the

Webequie community. Because of this, Webequie residents were documented as being Fort Hope Band members, even though [the Webequie peoples] occupied their homeland for hundreds of years. This meant that community leaders had to fight for decades to correct this devastating error" (Webequie First Nation, 2021).

In the 1960's, there was increased pressure for tourism on the Winisk River. In response, Ontario created the Winisk River Provincial Park (Webequie First Nation, 2019). This encroached on Webequie's exercise of inherent rights to the use of traditional lands and waters, as well as to pursue economic and community development goals.

It was not until 1985 that the federal government recognized Webequie as a distinct Band and allocated it Band Registration number 240 (Webequie First Nation, 2019). However, Webequie was recognized as a settlement, and did not have reserve lands allocated officially, and having a Band Registration number did not give Webequie reserve status, or the many associated benefits. Webequie continued to pursue reserve lands, which were finally granted in 2001 (Webequie First Nation, 2019).

2.3 Community Values and Aspirations

The Webequie Anishininniwuk have a traditional land use system that goes back several generations according to Elders. The inherent responsibilities are embedded in Indigenous Knowledge, philosophies and wisdom passed down and given to the Webequie peoples by the Creator, according to Elders (Webequie First Nation, 2019).

Elders have indicated that before Treaty No. 9 was signed, the older generation had foreseen the reserve system, that the community would be asked to settle in one location and compelled to live in a permanent community on-reserve. This was recognized to be at odds with the traditional way of life of the Anishinaabe, who were highly mobile, and maintained a sacred connection with a large tract of ancestral lands, in order to sustain themselves (Webequie First Nation, 2019).

The Webequie Anishininniwuk Elders were able to conceptualize how to secure the continuity of its traditional way of life and relationship with its ancestral lands while being confined to the reserve, and using resources in a sustainable, responsible and equitable manner to protect the health and well-being of future generations. The Three-Tier model has guided this concept and approach to planning and decision-making ever since (Webequie First Nation, 2019).

The Three-Tier model notes Webequie stewardship responsibilities, as part of the Creator's natural laws, are to be carried forward in planning and decision-making processes. It offers a model for respectful relationships with neighbouring communities, government and industry (Webequie First Nation, 2019).

It offers a path for respectful relationships with neighbouring communities, government and third parties based on mutual benefit for all people (Webequie First Nation, 2019). Today, the Three-Tier model is described in terms of planning for the reserve land base, the cultural land base and the economic land base (Webequie First Nation, 2019).

Through the Comprehensive Community Plan (CCP) process, Webequie has described the following community values (Webequie First Nation, 2021):

> *"Webequie is a resilient, culturally vibrant, healthy, holistic, and sustainable community. We harmonize traditional and modern knowledge, and the inherited teachings from our Elders, which reflect the gifts of Creator. With this Vision in mind, we will also work together to:*
>
> - Provide love and support for each other, on our healing path;
> - Harmonize the two worlds we live in; using both modern and traditional knowledge culture and language to make the best for our community; and
> - Act in our inherited stewardship responsibilities to sustain ourselves, share our resources, protect our livelihood for generations to come, and maintain our relationship with the land."

SOCIAL ENVIRONMENT

AtkinsRéalis - Confidential

3. Social Environment

3.1 Population and Demographics

Population and demographic data are important tools to assess Socio-Economic conditions in communities, as these data can identify vulnerable groups, the effects on vulnerable population groups such as women, disable persons, Elders and youth, segments of the population that will either benefit or be negatively impacted (directly or indirectly) by the Project, and barriers to participation for local under-represented groups. The existing conditions of population and demographics are described in this section using the following indicators:

- Population overview, including gender and age;
- Indigenous identity (First Nation, Métis, Inuit or non-Indigenous);
- Languages;
- Mobility and migration; and
- Immigration data is unavailable.

These indicators provide insights into the Socio-Economic existing conditions where the Project is being considered. They can help assess the potential effects of the Project and develop strategies to mitigate any negative effects.

3.1.1 Population Overview

The 2021 Census included, for the first time, a question on self-identified gender and added “at birth” to the gender question, which enabled cisgender, transgender and non-binary individuals to report their gender (Statistics Canada, 2023). Table 3-1 presents the forecasted population for Webequie over the projection period broken down by self-identified gender. Population trends by self-identified gender are summarized as follows:

- Over the projection period there is a decline in both the male and female populations;
- Between 2016 and 2043 the male population decreases from 365 to 249, a 31.7% decrease;
- Between 2016 and 2043 the female population decreases from 415 to 258, a 37.8% decrease; and
- The population distribution in Webequie is higher for the female population however the gap between male and female is closing.

Table 3-1: Population Forecast by Self-Identified Gender, Webequie (2016, 2021, 2028, 2033, 2043)

Year	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
2016	775	100%	365	47.1%	415	53.6%
2021	720	100%	340	47.2%	380	52.8%
2028	649	100%	308	47.4%	336	51.7%
2033	603	100%	287	47.5%	308	51.0%
2043	521	100%	249	47.8%	258	49.5%

Source: Statistics Canada, 2017a; 2022.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-2 displays forecasted population for Webequie over the projection period by age group. The age groups are 0 – 14 years, 15 – 64 years, and 65 years and over. The 15 – 64 years age group represents the potential labour force. The 0 – 14 years and 15 – 64 years age groups are both declining over the projecting period while 65 years and over remain consistent. Population trends by age group are summarized as follows:

- Between 2016 and 2043, the 0 – 14 years age group decreases from 275 to 164, a 40.4% decrease;
- Between 2016 and 2043, the 15 – 64 years age group decreases from 450 to 310, a 31.1% decrease; and
- Between 2016 and 2043, the 65 years and over age group remains consistent at 50.

Table 3-2: Population Forecast by Age Group, Webequie (2016, 2021, 2028, 2033, 2043)

Year	Total		0 to 14 years		15 to 64 years		65 years and over	
	Count	Distribution	Count	Distribution	Count	Distribution	Count	Distribution
2016	775	100%	275	35.5%	450	58.1%	50	6.5%
2021	720	100%	250	34.7%	420	58.3%	50	6.9%
2028	650	100%	219	33.7%	381	58.7%	50	7.7%
2033	605	100%	199	32.9%	356	58.9%	50	8.3%

Source: Statistics Canada, 2017a; 2022.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

3.1.2 Indigenous Identity

Table 3-3 present the population for Webequie categorized by Indigenous identity[1] in 2021. In 2021, 100% of community members within the Webequie census subdivision identified solely as First Nations.

Table 3-3: Population Forecast by Self-Identified Indigenous Population, Webequie (2021)

Indigenous Identity	Count	Distribution
First Nations	720	100%
Métis	-	0%
Inuk	-	0%
Non-Indigenous	-	0%
Total	**720**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

3.1.3 Languages

Table 3-4 present the languages most often used in the home within Webequie in 2021. Languages used by Webequie First Nation in 2021 are summarized as follows:

- The majority of households in Webequie speak English while at home at approximately 60%.
- Oji-Cree is the second most spoken within the home at 28%.
- Ojibway is the least spoken language at home at 12%.

[1] Indigenous identity (or Aboriginal identify) is defined by the Constitution Act, 1982, Section 35(1) as including Indian, Métis and Inuit Peoples.

Table 3-4: Language Used Most Often at Home, Webequie (2021)

Language	Count	Distribution
English	390	60%
Oji-Cree	180	28%
Ojibway	75	12%
Total	**645**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

3.1.4 Mobility and Migration

Table 3-5 present the mobility status of Webequie residents as of 2020. Mobility status refers to the status of a person with regard to their place of residence on Census Day in relation to their place of residence on the same date 1 or 5 years earlier (Statistics Canada, 2022a).

Residents are categorized as “non-movers” or “movers”. Persons who, on Census Day, lived in the same residence as they did on the same date 1 year or 5 years earlier are referred to as non-movers, and persons who, on Census Day, did not live in the same residence as they did 1 year, or 5 years earlier are referred to as movers. Movers include non-migrants, migrants, internal migrants, and external migrants. Mobility status of Webequie residents in 2020 is summarized as follows:

- 95.8% of residents were in the “non-movers” category;
- 4.2% of residents were in the “movers” category;
- 97% of males were in the “non-movers” category; and
- 96% of females were in the “non-movers” category.

Table 3-5: Mobility Status of Residents, Webequie (2020)

Mobility Status	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
Non-movers	685	95.8%	325	97.0%	360	96.0%
Movers	30	4.2%	10	3.0%	15	4.0%
Total	**715**	**100%**	**335**	**100%**	**375**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

3.2 Housing and Accommodations

Housing and accommodations are an important factor among First Nations people living on reserves. In 2021, it was recorded that one in five First Nations people (21.4% or 224,280 people) reported that they consider the household they live in as being crowded (Statistics Canada, 2022a). This problem is primarily due to houses not having enough rooms for families and multiple generation of families living in the same household. Furthermore, many houses in First Nation reserves are in poor condition and require major repairs.

The following sections provide information that will enable the assessment of effects on housing and accommodations by using the following indicators:

- Housing characteristics;

- Household characteristics; and
- Housing condition.

These indicators help with understanding existing Socio-Economic conditions of the community and predict potential effects of the Project on the community's quality of life.

3.2.1 Housing Characteristics

The following subsections describe housing characteristics which include the number of private dwellings and occupied private dwellings, structure type of private dwellings, and tenure type of private dwellings for Webequie First Nation. Table 3-6 presents the total private dwellings and private dwellings occupied by usual residents in Webequie in 2021. Private dwelling occupied by usual residents refers to a private dwelling in which a person or a group of persons is permanently residing (Statistics Canada, 2019). Information on private dwellings in Webequie in 2021 is summarized as follows:

- There are 171 total private dwellings in Webequie at 51%.
- The remainder 166 (49%) are occupied by usual residents.

Table 3-6: Total Private Dwellings and Occupied Private Dwellings in Webequie First Nation (2021)

Dwelling	Count	Distribution
Total private dwellings	171	51%
Private dwellings occupied by usual residents	166	49%
Total	**337**	**100.0%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-7 present the total occupied dwellings in Webequie by structure type in 2021. Structure type of occupied dwellings in Webequie in 2021 is summarized as follows:

- The majority of dwellings are classified as single-detached at 84.8%; and
- The remaining dwellings are classified as semi-detached and account for 15.2% of the occupied dwellings in Webequie.

Table 3-7: Total Occupied Private Dwellings by Structural Type in Webequie (2021)

Structural Type	Count	Distribution
Single-detached house	140	84.8%
Semi-detached house	25	15.2%
Row house	-	0%
Apartment or flat in duplex	-	0%
Apartment in a building that has fewer than five storeys	-	0%
Apartment in a building that has five or more storeys	-	0%
Other single-attached house	-	0%
Moveable dwelling	-	0%
Total	**165**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-8 present the total occupied dwellings in Webequie by structure type in 2021. Structure type of occupied dwellings in Webequie in 2021 is summarized as follows:

- The majority of the private dwellings in Webequie are considered government or band housing, accounting for 94.3% of dwellings; and
- The remaining private dwellings are owned and account for 5.7% of dwellings.

Table 3-8: Private Dwellings by Tenure in Webequie (2021)

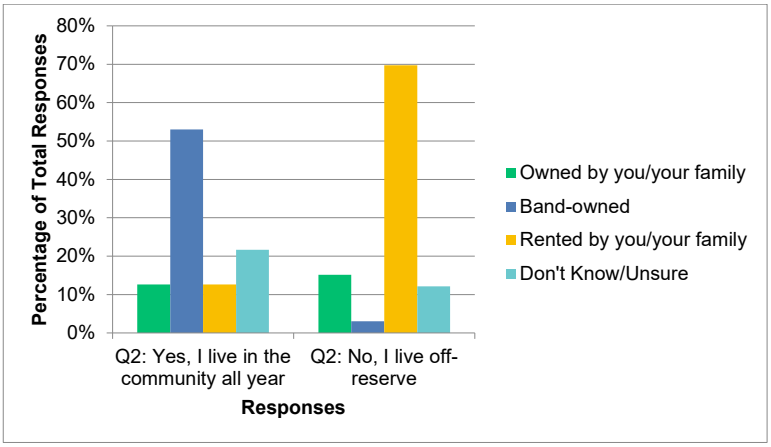
Tenure	Count	Distribution
Owner	10	5.7%
Renter	0	0%
Dwelling provided by the local government, First Nation or Indian band	165	94.3%
Total	**175**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

A Socio-Economic survey was conducted in 2022 to collect data on community housing and accommodation from individuals living on-reserve and off-reserve (SNC-Lavalin, 2022a). When individuals were asked about the ownership of their housing and accommodation, 88 out of 166 responses from individuals living on-reserve (53.0%) indicated that their housing is Band-owned, while 23 out of 33 responses from individuals (69.7%) that live off-reserve indicated that their housing is rented, as shown in Figure 3-1.

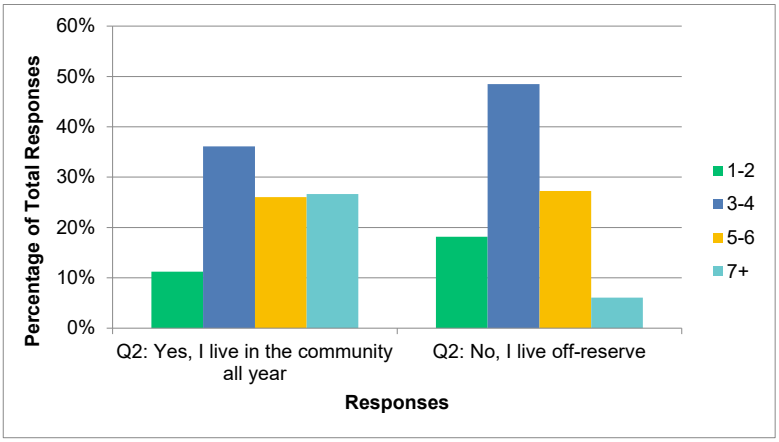
Figure 3-1: Housing Ownership - WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022a

When individuals were asked about their housing and accommodation situation, individuals living on-reserve and individuals living off-reserve had similar responses. Most households house 3 to 4 community members, 61 out of 169 responses from individuals living on-reserve (36.1%) and 16 out of 33 responses from individuals living off-reserve (48.5%), as shown in Figure 3-2. Houses with at least seven members was much more common on-reserve (26.6%), compared to houses off-reserve (6.1%).

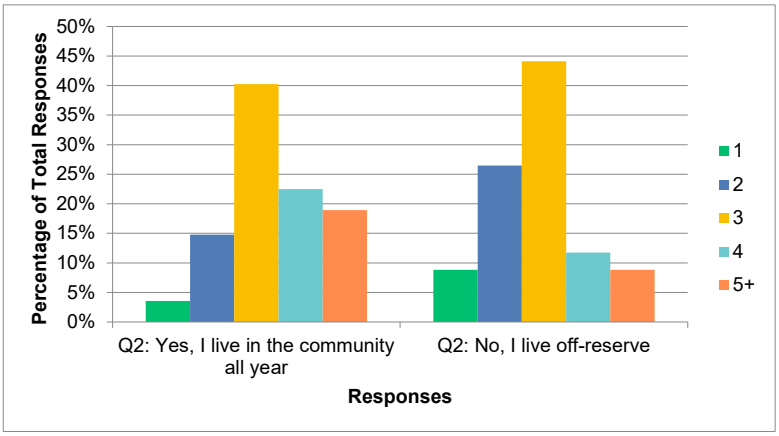
Figure 3-2: Number of People per House - WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022a

Despite most households having 3 to 4 members, the majority of houses both on-reserve and off-reserve have 3 bedrooms as indicated by 68 out of 169 responses from individuals living on-reserve (40.2%) and 15 out of 34 responses from individuals living off-reserve (44.1%), as shown on Figure 3-3.

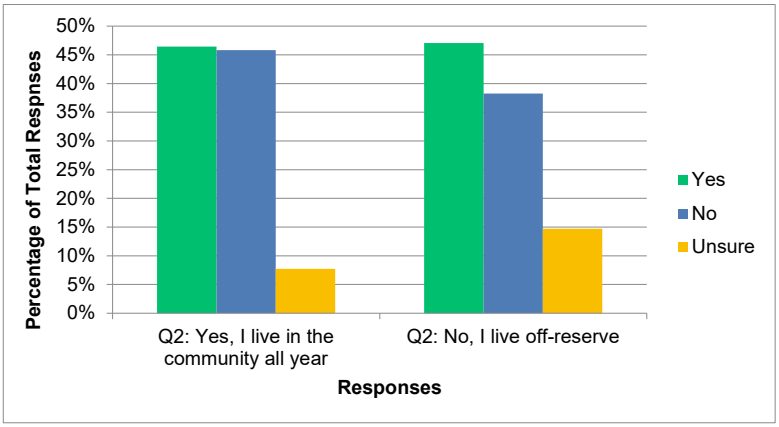
Figure 3-3: Number of Bedrooms per House – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022a

However, as shown on Figure 3-4, when individuals were asked whether they felt overcrowded in their living space, the number of individuals living on-reserve who responded with “Yes [I feel overcrowded]” (46.4%), was almost equal to those also living on-reserve who responded with “No [I do not feel overcrowded]” (45.8%), and the remaining respondents who responded that they were unsure (7.7%). Slightly more respondents living off-reserve, felt overcrowded (47.1%) than those that did not (38.2%). The remaining respondents indicated they were unsure (14.7%). Community members have indicated that temporary housing such as “couch-surfing” is somewhat common. For example, one grandmother moved out of her own home and now stays with a friend, to free up more space for her children and grandchildren (SNC-Lavalin, 2022).

Figure 3-4: Respondents on Whether They Felt Overcrowded – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022a

3.2.2 Household Characteristics

The following subsections describe characteristics of households (i.e., occupied private dwellings) for Webequie First Nation. Table 3-9 presents the number of households by household size (i.e., the number of people per household) in Webequie for 2021, as summarized below and in Table 3-9:

- Nearly half of households are occupied by 5 or more persons at 48.5%; and
- The least number of households are occupied by 1 person at 9.1%.

Table 3-9: Number of Households by Household Size in Webequie (2021)

Household Size	Count	Distribution
1 person	15	9.1%
2 persons	20	12.1%
3 persons	25	15.2%
4 persons	25	15.2%
5 persons or more	80	48.5%
Total	**165**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-10 presents the number of rooms per household for Webequie in 2021. The number of rooms per household in Webequie in 2021 is summarized as follows:

- The majority of households in Webequie consist of 5 rooms at 33.3% followed by 1 to 4 rooms at 27.3%; and
- The least number of households are comprised of 8 or more rooms at 6.1%.

Table 3-10: Number of Households by Number of Rooms per Household in Webequie (2021)

Household Size	Count	Distribution
1 to 4 rooms	45	27.3%
5 rooms	55	33.3%
6 rooms	35	21.2%
7 rooms	20	12.1%
8 or more rooms	10	6.1%
Total	**165**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

3.2.3 Housing Conditions

The following subsections describe housing conditions, including the number of occupied private dwellings built during various periods of construction from 1960 up to 2021, as well as suitability and dwelling condition for Webequie First Nation.

- Table 3-11 presents the total number of occupied private dwellings by period of construction from 1960 up to 2021 in Webequie First Nation as follows: Dwellings constructed during the period from 1981 to 1990 is the largest group with 28.1% of private dwellings constructed during this period;
- During the periods of 1960 or before and 2001 to 2005 no private dwellings were reported being constructed;
- 65.6% of the occupied private dwellings in Webequie were constructed during or prior to 2000; and
- Over the last two decades, 55 dwellings were constructed which comprises less than 34.4% of the occupied housing stock.

Table 3-11: Occupied Private Dwellings by Period of Construction in Webequie (2021)

Construction Period	Count	Distribution
1960 or before	0	0%
1961 to 1980	30	18.8%
1981 to 1990	45	28.1%
1991 to 2000	30	18.8%
2001 to 2005	0	0%
2006 to 2010	10	6.3%
2011 to 2015	10	6.3%
2016 to 2021	35	21.9%
Total	**160**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-12 presents the suitability of occupied private dwellings in Webequie First Nation for 2021. Dwellings are categorized as either “suitable” or “unsuitable”. Housing suitability assesses the required number of bedrooms for a household based on the age, sex, and relationships among household members according to the National Occupancy Standard (Statistics Canada, 2017b).

- In 2021, 37.5% of the occupied private dwellings in Webequie were categorized as unsuitable.

Table 3-12: Occupied Private Dwellings by Suitability in Webequie (2021)

Suitability	Count	Distribution
Suitable	100	62.5%
Not suitable	60	37.5%
Total	**160**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-13 presents the condition of private dwellings in Webequie for 2021. Dwellings are categorized as either “only regular maintenance and minor repairs needed” or “major repairs needed”. Dwelling condition refers to whether the dwelling is in need of repairs. This does not include desirable remodelling or additions.

The 'regular maintenance needed' category includes dwellings where only regular maintenance such as painting or furnace cleaning is required. The 'minor repairs needed' category includes dwellings needing only minor repairs such as dwellings with missing or loose floor tiles, bricks or shingles; or defective steps, railing or siding. The 'major repairs needed' category includes dwellings needing major repairs such as dwellings with defective plumbing or electrical wiring; and dwellings needing structural repairs to walls, floors or ceilings (Statistics Canada, 2021).

- In 2021, 47.1% of the private dwellings in Webequie First Nation were categorized as requiring major repairs.

Table 3-13: Occupied Private Dwellings by Dwelling Condition in Webequie (2021)

Dwelling Condition	Count	Distribution
Only regular maintenance and minor repairs needed	90	52.9%
Major repairs needed	80	47.1%
Total	**170**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

3.3 Community Services

Community services are a significant issue in remote communities because many services that are required by community members need to be accessed outside the community or are only available intermittently within the community. Historically, remote Indigenous communities have been under-serviced, which has had detrimental effects on the health and well-being of community members. Some of the most vulnerable people in the community have difficulty accessing services outside the community due to health and financial factors. The community services in Webequie First Nation are described in this section using the following indicators:

- Demand for community services; and
- Supply and capacity of community services.

These indicators were selected to provide an understanding of the community services that currently exist and the community services essential for the community (e.g., health care). The existing conditions of community services in the Webequie First Nation are described in this section including family, child, Elders, health, cultural, recreational, and communications services.

Information has been collected principally from online sources, such as the Webequie First Nation website (Webequie.ca) and 211 Ontario North (211north.ca), an information portal on social, community, health and government services in Northern Ontario, focused on Indigenous communities. The Socio-Economic Baseline also incorporates information obtained through the Socio-Economic Primary Data Collection Program, which includes data collected from knowledge holder interviews, focus groups with diverse groups, and Socio-Economic surveys.

3.3.1 Family Services

Tikinagan, a social services organization, provides child and family services for Webequie First Nation. It is Ontario's largest residential services provider, covering approximately one-third of the province and serving 30 Indigenous communities (Tikinagan Child & Family Services, 2023a). In January 2020, the Ministry of Community and Social Services with the Band Council designated Tikinagan to provide child protection services to families from Thunder Bay district (Tikinagan Child & Family Services, 2023a).

The name "Tikinagan" derives from the Anishinaabe word for cradle, symbolizing the organization's mission. Elder craftswomen and craftsmen still make unique cradleboards in communities today. Tikinagan was established to offer culturally specific child and family services, recognizing the harm caused by support services provided from outside Indigenous communities (Tikinagan Child & Family Services, 2023b).

The services provided are culturally responsive, respecting traditional values and customs. The "Mamow Obiki-ahwahsoowin" model guides service delivery, emphasizing consultation with community Elders for wisdom and direction, First Nations Chief and Council involvement in case management decisions (Tikinagan Child & Family Services, 2023c).

Tikinagan aims to keep children in their home communities whenever possible. If necessary, foster homes are located nearby to minimize the distance from home and maintain familiarity. In Webequie, Tikinagan supports youth, women, and families, addressing personal, household-related, and community-wide issues such as substance abuse, housing shortage, poverty, and lack of daycare (Tikinagan Child & Family Services, 2023c). The authority to remove a child from the home rests solely with Chief and Council.

Accessing Tikinagan services is hindered by concerns about confidentiality. Community members believe their personal information may not be kept private. The community has expressed the need for a dedicated facility which is separate from the current building shared with other services, such as banking and groceries, to enhance comfort in seeking assistance.

An online survey for on-reserve community members revealed that 29% of 131 respondents lacked access to food distribution programs. Additionally, 13.7% had access but chose not to utilize these programs. Among those who accessed and used food distribution programs, the majority (35.9% of respondents) reported doing so on a yearly basis (SNC-Lavalin, 2022a).

3.3.2 Child Care and Youth Programs

3.3.2.1 Healthy Babies Healthy Children

The Healthy Babies Healthy Children program is dedicated to providing comprehensive parenting support and fostering healthy child development. It specifically caters to children under 6 years old in Webequie. This program offers a range of valuable supports and resources (211north.ca, 2023a).

These supports include group information and educational sessions that cover essential topics such as healthy pregnancy, childbirth, and caring for babies at home. The program also provides valuable information on the different stages of pregnancy and equips parents with a helpful handbook called "Baby's Best Chance."

To secure continued assistance, program participants receive follow-up telephone calls 48 hours after their hospital discharge. Additionally, trained professionals conduct home visits both before and after birth, offering vital support to new mothers and assisting in early childhood development. Referrals to other relevant programs and services are also provided.

While many parents have benefited from this program, it has faced challenges due to the ongoing COVID 19 pandemic. Furthermore, concerns persist regarding dental services for both infants and mothers, as the community's current dental services fail to meet established guidelines (SNC-Lavalin, 2022b).

3.3.2.2 Aboriginal Head Start Program

Webequie's sole preschool program is the Aboriginal Head Start Program, catering to children aged 4 and under. Consequently, once children complete this program, they have no further options for formal education within the community (SNC-Lavalin, 2022b). Notably, there is currently no childcare program available in Webequie.

3.3.2.3 Choose Life Program

The Choose Life Program is specifically designed for youth aged 7 to 17 years. It focuses on land-related activities such as fish netting, moose hunting, and canoeing. Elders play an active role in the program, sharing their knowledge and teachings while engaging with the youth on the land (SNC-Lavalin, 2022b).

3.3.2.4 Service Adequacy and Availability

The Health Director has expressed concern about the availability and adequacy of programs aimed at ensuring children's safety and well-being within the community. It was suggested that the existing programs might not fully meet the specific needs and desires of the community, highlighting a potential gap between reported programs and community expectations. While programs like Jordan's Principle and provincial early years programs were acknowledged, the interviewee implied that they may not entirely fulfill the community's requirements for child safety and support. Furthermore, these programs only receive partial recognition in terms of funding and tribunals (SNC-Lavalin, 2022b).

These concerns align with the findings of an online survey conducted in 2022, which collected data from individuals residing on-reserve. The survey revealed that 68% of respondents (83 out of 122 respondents) reported a lack of access to childcare. Among the requested services, childcare ranked as the most desired by the community, with 110 out of 146 responses indicating the need for childcare services (SNC-Lavalin, 2022a).

Youth services also faced challenges, with a significant portion of respondents stating either a lack of access (36.1% of respondents) or access without utilization (33.6% of respondents). Additionally, 31.2% of respondents reported no access to Jordan's Principle, while 47.2% had access but did not use it. Among those with access to Jordan's Principle, the majority (8.8% of respondents) utilized it on a monthly basis (SNC-Lavalin, 2022a).

Access to education programs for students with special needs, including individual education plans, also raised concerns. The survey indicated that 40.5% of respondents (49 out of 121 respondents) did not have access to these programs, while 37.2% had access but did not utilize them. Among those who did utilize these programs, the majority used them on a daily (7.4% of respondents) or yearly basis (6.6% of respondents) (SNC-Lavalin, 2022a).

These survey findings further support the former Health Director's viewpoint regarding the gaps and limitations in existing programs, emphasizing the need for more comprehensive and accessible services to address the diverse needs of the Webequie community.

3.3.3 Elder Care

3.3.1 Home and Community Care

Indigenous Services Canada, through the First Nations and Inuit Home and Community Care (FNIHCC) program, provides funding and guidance for Elder care. This program aims to establish Home and Community Care services for Indigenous individuals residing in First Nations and Inuit communities (Indigenous Services Canada, 2023). It encompasses First Nations individuals living on reserves who have been assessed as requiring one or more services.

The FNIHCC program prioritizes various services, including client needs assessment, case management, and care coordination. It also covers in-home respite care, temporary care, nursing care planning, and personal care management. Health centres like the Sioux Lookout First Nations Health Authority play a crucial role in delivering in-community healthcare services.

However, the community lacks a long-term Elder care facility. Instead, community staff conduct home visits to assist with household tasks, personal care, and transportation as needed (SNC-Lavalin, 2022c). When more intensive care is required, Elders with identified care needs are often compelled to seek services outside the community, primarily in Thunder Bay.

Interviews revealed that having appropriate local facilities would enable Elders to receive care within the community, alleviating the need to travel to Thunder Bay (SNC-Lavalin, 2022b). The establishment of local facilities would also facilitate easier road travel for Elders and individuals with special needs, eliminating the current reliance on flights (SNC-Lavalin, 2022c).

The lack of suitable facilities poses challenges for young families who struggle to care for their parents, resulting in Elders being sent to retirement facilities in Thunder Bay, which can be financially burdensome. The expenses associated with accommodation and care in Thunder Bay may surpass the means of the individual or their family. Moreover, specific medical requirements such as dialysis treatment are unavailable in the community. Even portable dialysis machines necessitate trained personnel and incur significant transportation costs. The pressing need for a comprehensive health centre that includes a retirement home, nursing station, and full-time doctor is apparent to address the healthcare needs of the community (SNC- Lavalin, 2022d).

The concerns raised in the interviews are supported by the findings of an online survey conducted with individuals residing on-reserve. The survey revealed that 66.7% of respondents (78 out of 117 respondents) reported a lack of access to Elder care. When asked about desired social services for Webequie First Nation members, Elder care service ranked as the second most requested service after childcare service, with 104 out of 146 responses emphasizing the need for Elder care (SNC-Lavalin, 2022a).

The findings of the survey underscore the urgent requirement for suitable facilities and comprehensive healthcare services to address the unique needs of the community's aging population.

3.3.4 Health Services

3.3.4.1 Crisis Intervention

Crisis Intervention provides immediate support to individuals affected by family violence and suicide within the Webequie First Nation. Their services are readily available either on-site or via telephone, and if necessary, they can promptly dispatch the police. Their primary focus is on ensuring the safety of victims while offering them compassionate support and assistance. Additionally, Crisis Intervention facilitates meetings with family members to explore potential resolutions for the crisis at hand. They also play a crucial role in coordinating crisis plans for suicide and domestic violence intervention, as well as managing other types of crisis situations that may arise in the community. Furthermore, Crisis Intervention provides vital information and referrals to appropriate resources and services (211 Ontario North, Webequie First Nation, 2023a).

3.3.4.2 Health and Social Services

The Health Services programs in Webequie strive to promote the physical and mental well-being of community members. They achieve this by coordinating a dedicated team comprising three community health nurses/nurse practitioners, one community health representative, and two full-time counsellors. The organization offers physician consultations twice a month through a visiting physician from Sioux Lookout. Moreover, Health Services conducts health awareness and counselling sessions, educational workshops, and preventive programs on various topics such as diabetes, alcohol/drug abuse, sexual health, and communicable diseases. They also coordinate clinics and workshops related to diabetes management, immunization, sexual health, and communicable diseases (211 Ontario North, Webequie First Nation, 2023b).

However, community interviews have revealed that the absence of a full-time doctor and reliance on rotating nurses creates a need for more consistent healthcare provision. The isolated geographic location of the area poses challenges to the delivery of clinical services. Transportation delays, particularly during winter, can result in delayed service and, in severe cases, loss of life. To address these issues, there is a pressing need for an improved facility with enhanced equipment to provide adequate care for patients, including overnight accommodation (SNC-Lavalin, 2022b).

Consequently, the lack of timely and sufficient healthcare has led to the loss of numerous community members, generating frustration among both the community and their families. This deficiency in healthcare services and government support has eroded confidence in the system. Additionally, the community lacks essential emergency services such as ambulances and fire trucks. Multiple unmet needs persist, making it crucial to establish a healthy and thriving community instead of one constantly grappling with challenges (SNC-Lavalin, 2022d).

The Health Director, during the Webequie Knowledge holder Interview in 2022, highlighted the high rates of diabetes in the community and emphasized the importance of prevention and management. They mentioned complications faced by community members with diabetes in urban settings, including amputations and vision loss. Other prevalent health issues mentioned were hypertension, arthritis, and various types of cancer such as breast, ovarian, and colon cancer, which have witnessed an upward trend over time. The Health Director further expressed concern about the intergenerational trauma resulting from the residential school system. They specifically mentioned the schools attended by affected community members and expressed worry about missing individuals, including their own family members. According to the Health Director, mental health and addiction issues in the community often stem from the lasting trauma caused by residential schools. Some individuals seek help independently, while others engage in land-based activities and exercises to address and cope with this trauma (SNC-Lavalin, 2022b).

3.3.4.3 Mental Health Services

Mental Health Services, including counselling, are available in Webequie. According to the Webequie Knowledge holder Interview with the former Health Director in 2022, mental Health Services have faced challenges, including tragic losses of life. Funding has been secured to address these mental health service issues, particularly in responding to crisis situations. However, limited resources in terms of call availability and the number of responders puts a strain on the dedicated workers who tirelessly operate around the clock without breaks (SNC-Lavalin, 2022b).

The Health Director, during the Webequie Knowledge holder Interview in 2022, emphasized the significant need for mental health and addiction services, particularly related to prescription drug addiction, within Webequie First Nation. These issues have been prevalent among community members aged 18 to 58 years. The Health Director stressed that addiction affects both men and women and can be linked to childhood experiences, such as parental addiction, violence, or separation.

To address these challenges, Webequie First Nation currently offers a suboxone program for treating opioid addiction and plans to renovate a building into a detox centre to provide additional support services. The Health Director highlighted the prominence of mental health challenges, including suicidal ideation, within the community. They emphasized the urgent need for more qualified local mental health counsellors, as community members currently have to seek help outside the community. The COVID-19 pandemic further exacerbated mental health and addiction issues, in particular with young girls requiring significant treatment for mental health concerns and potential referrals to specialized treatment centres. The Health Director mentioned that proposals are submitted for community members to access mental health treatment centres, with an increase in submissions observed from September to November (SNC-Lavalin, 2022b).

3.3.4.4 Home and Community Care – Physiotherapy Services

The Home and Community Care program in Webequie provides in-home rehabilitative care to individuals who require assistance in maintaining or regaining their independence. The physiotherapy services offered can be provided either at the client's home or at the nursing station, depending on their specific needs. These services encompass physiotherapy, occupational therapy, speech language pathology, and case management. Eligibility for these services is determined based on the individual's specific needs and requirements (211north.ca, 2023b).

3.3.4.5 National Native Alcohol and Drug Abuse Program

The deep-rooted intergenerational trauma experienced in Webequie First Nation has resulted in drug use and addiction, emphasizing the urgent need for healing to foster economic development and progress (SNC-Lavalin, 2022f).

The National Native Alcohol and Drug Abuse Program plays a crucial role in providing support to individuals and families grappling with addiction issues. Through initiatives such as Alcoholics Anonymous (AA) and Narcotics Anonymous (NA) meetings, the program offers a platform for assistance and transportation services to all gatherings and workshops upon request. Additionally, preventive measures include public seminars, educational sessions in schools, and the organization of cultural and spiritual events. The intervention program further facilitates recreational activities, group discussions, and cultural gatherings to aid in recovery. Aftercare services encompass counselling, support groups, sharing circles, regular phone calls, home visits, and referrals to detoxification and medical assistance when needed (211north.ca, 2023c).

The significance of addressing addiction and promoting mental well-being is underscored by survey data collected from Webequie First Nation community members. Out of 124 respondents, 23.4% expressed a lack of access to Choose Life/Suicide Prevention programs, while 39.5% reported having access but not utilizing them. Among those who did use these programs, a majority (11.3%) engaged with them on a monthly basis (SNC-Lavalin, 2022a).

In terms of traditional healing programs, 18.7% of the 139 respondents highlighted their unavailability, while 31% confirmed having access but not utilizing them. Among those who utilized traditional healing programs, the majority participated on a monthly (21.6%) or yearly (17.3%) basis (SNC-Lavalin, 2022a). These statistics shed light on the need to verify accessibility and utilization of support services to promote healing and well-being within the Webequie First Nation community (SNC-Lavalin, 2022a).

3.3.5 Cultural Services

3.3.5.1 Family Well-Being Program

The Family Well-Being Program, an initiative by the Nishnawbe Aski Nation, is dedicated to supporting Indigenous communities in developing and delivering culturally appropriate services and programs to promote community health and family well-being. With a focus on empowering families and enhancing overall community health, the program offers a range of activities and initiatives. These include language revitalization, alcohol and drug abuse prevention and intervention, community events such as feasts, family circles, counselling and support groups for children and youth, referrals to other programs and services, school programs, and traditional land-based healing events. The program strives to address issues such as family violence, youth involvement in the justice system, and the number of children in care (211north.ca, 2023d).

Despite the existing services, community interviews revealed a lack of support for families with children experiencing developmental delays, resulting in caregiver burnout and a need for respite services. While Thunder Bay offers resources for caregiver support and medication management, these services are not available in the community. This support gap extends beyond Webequie First Nation and requires attention from Nishnawbe Aski Nation to address the needs of multiple communities (SNC- Lavalin, 2022f). Moreover, women may be hesitant to seek services due to the fear of judgment and concerns about revealing their access to resources. It is crucial to promote the idea that seeking help is a healthy and acceptable choice. The judgmental attitudes within the community may stem from intergenerational trauma caused by the residential school system, where individuals were taught to feel ashamed. Healing from this trauma is essential for the future well-being of the community, as it involves reclaiming identities and alleviating the guilt associated with cultural beliefs (SNC-Lavalin, 2022f).

In an online survey conducted by SNC-Lavalin to gather data from individuals living on-reserve, 27.6% of respondents (35 out of 127) reported not having access to wellness counselling, while 34.7% (44 out of 127) indicated having access but not utilizing it. Among respondents who had access and utilized wellness counselling, the majority (33 out of 127) reported using it on a monthly basis (SNC-Lavalin, 2022a). These results emphasize the need to secure access and utilization of wellness counselling services for the well-being of the community.

3.3.6 Recreational Services

Tourism in Webequie First Nation revolves primarily around outdoor activities, specifically hunting and fishing, which are central to the local tourism experience. The area boasts two hunting and fishing lodges that offer guided outdoor recreation packages, allowing visitors to immerse themselves in the natural beauty of the region. Cultural tourism is also emphasized on the First Nation website, providing visitors with an enriching opportunity to learn about the traditional way of life of the Webequie First Nation community (Webequie First Nation, 2023b).

However, throughout the past three decades, the Webequie First Nation has encountered considerable challenges stemming from the province's inadequate provision of programs and support, as revealed in the Webequie Knowledge holder Interview with one Councillor (SNC-Lavalin, 2022g). Insufficient spaces for sports and a lack of support for both children and adults have emerged as pressing concerns, further compounded by the limited availability of activities. In response, the community has set its sights on self-initiated road and mine projects as a means to generate funds. These crucial funds will enable the acquisition of essential resources, including planes, helicopters, arenas, skating rinks, camps, and new buildings. Moreover, the pressing need for a modern recreation facility to replace the existing aging structure and the development of proper roads within the community cannot be understated. By steadfastly pursuing these initiatives, Webequie First Nation aspires to confront the challenges it faces head-on, fostering a more vibrant and prosperous community in the process (SNC-Lavalin, 2022g).

3.3.7 Communications Services

3.3.7.1 Communications

Webequie First Nation community has various communication channels available to its residents. Canada Post operates in Webequie five days a week, providing postal services to the community. Bell Canada offers digital telephone services, allowing residents to make and receive calls. For news, residents can access Wawatay newspaper, which is published monthly, or Sioux Bulletin, which is published weekly. In terms of radio, Webequie residents can tune in to the local station, C.S.P.N. radio, or Wawatay radio, which is available via satellite. Finally, Webequie telecommunications offers internet services through a cable network, allowing residents to stay connected with the rest of the world (Webequie First Nation, 2023c).

3.3.7.2 Webequie KO Telehealth

Webequie First Nation KO telehealth has been fully operational since June 2005, providing improved Health Services to the isolated community of 700 people through the use of internet broadband technology. With this telehealth service, residents of Webequie can now access health specialists in major cities such as Toronto, Winnipeg, Thunder Bay, and even from around the world. The band has hired a Community Telehealth Coordinator (CTC) to provide telehealth services to the community, ensuring that everyone has access to quality healthcare (Webequie First Nation, 2023d).

3.3.7.3 Ontario Telemedicine Network (OTN)

The OTN offers specialized medical care through videoconferencing and other tele-diagnostic equipment, enabling specialists to remotely examine and prescribe treatments to patients in their home communities. This reduces the need for patients to travel to receive care, providing greater convenience and accessibility for those living in remote or underserved areas. Critical patients who require immediate medical attention are airlifted by air ambulance to hospitals in Sioux Lookout, Thunder Bay or Winnipeg (211 Ontario North, Webequie First Nation, 2023b).

3.4 Education and Training Services and Facilities

Education and training services and facilities are limited in many fly-in First Nation communities. In the 2015/2016 school year, high-school completion and post-secondary participation were higher among non-Indigenous youth in Canada compared to Indigenous youth (Statistics Canada, 2023). However, when comparing First Nation youth living on-reserve to First Nation youth living off-reserve-, those that live off-reserve are more likely to receive a high-school diploma, which is most likely due to the lack of accessible high-schools for youth living in remote communities.

This section describes the existing conditions of Education and Training Services and Facilities using the following indicators:

- Demand for community education and training services;
- Supply and capacity of community education and training services; and
- Learning of traditional knowledge, which includes culture, language, and natural Laws.

Information on Education and Training Services and Facilities of communities was collected from Statistics Canada, municipal and provincial government websites, and First Nation research studies.

Webequie First Nation has a Kindergarten to Grade 10 Band operated school on-reserve – Simon Jacob Memorial Education Centre. Simon Jacob is run by the Webequie First Nation Education Authority under the direction of Chief and Council (SJMEC, 2023). Simon Jacob offers culturally relevant content, that reflects the traditions, language and way of life of Webequie First Nation and the Anishinaabe people. The schedule allows students to participate in spring and fall hunts. Simon Jacob has a teacher on-site that supports the online education component for students and works in partnership with Keewaytinnook Internet High-School (KIHS) or Wahsa for students to obtain their Ontario Secondary School Diploma. An interview conducted in 2022 outlined that there were 165 students enrolled with 50 students enrolled in high-school (SNC-Lavalin, 2022h). Simon Jacob was built in 1993 and includes three portable classrooms, a school warehouse, education building and teacherage residences for the teachers. There are 12 teacherages that provide living spaces for teachers and 6 storage buildings associated with the teacherages (Webequie First Nation On-Reserve Land Use Plan, 2019).

One of the goals of the Webequie First Nation On-Reserve Land Use Plan is to strengthen the educational opportunities in the community including expansion of the existing school and youth camps (Webequie First Nation On-Reserve Land Use Plan, 2019). Expanding the school would help with overcrowding of the classrooms and additional space for programs and training to be offered within the community (Webequie CCP, 2021).

An employment training program is available through Matawa First Nations, funded by Employment and Social Development Canada (ESDC) (SNC-Lavalin, 2021). Approximately 42 workers were certified through the program in its recent history, which included millwrights, heavy equipment operators, remote camp cooks, and underground miners. However, due to a lack of job availability in Webequie, the program is not utilized currently, and certified trainees' skills are therefore also under-utilized. The Economic Development Officer expressed concerns that when the mine opens many certified members of the community will be in their 40's and 50's, and thus they are considering training younger members (18 to 20 years old), as heavy equipment operators and mechanics for the Project; additionally, project management training is planned. The community is hoping to target more education and engagement opportunities towards members under 35 years old.

An esteemed leader of the community commented that accessibility to education and training programs for youths in the community is lacking, mostly due to insufficient funding (SNC-Lavalin, 2022i). Even after graduating from high- school, many youth are unable to find employment. The community would like to train more youth in skilled trades such as plumbers, electricians, carpenters, and mechanics (SNC-Lavalin, 2022j). Having members of the community join the police force would also be beneficial for the community as they would have an enhanced understanding of the community and potential insights to resolve conflicts amicably.

The education system was managed by the Department of Indian Affairs until September 1994 when the community took over (SNC-Lavalin, 2022c). However, from interviews it was heard that after the community took over management of the education system, the quality of the education degraded significantly (SNC-Lavalin, 2022h). Those who graduated from this education system were at a similar level as a Grade 6 or 7 student, with most graduates not knowing how to write in cursive or type on a keyboard. As a result of the differences in education levels, training becomes much more important to community members when more employment opportunities within the community arise. There are several youth members of the community who are interested in new employment opportunities, but the majority of those interested are in the older demographic of the community. Attracting younger members to take part in training opportunities is difficult because most youth begin to lose interest in their 20's.

The level of education offered at schools on-reserve range from preschool (known as Aboriginal Headstart) and kindergarten to Grade 12 (online) (SNC-Lavalin, 2022h). Distance education programs are also available, such as Washa in Sioux Lookout and KIHS (an online high-school that offers courses through Kuhkenah Network (KNET)).

Special education and services, such as Jordan's Principle and special counselling, are expensive for schools in the community (SNC-Lavalin, 2022h). Moreover, some of these special services are difficult for members of the community to access as flying out is expensive and time consuming. There are also housing and expense problems when bringing counsellors into the community. Housing is limited to five rooms at the hotel and the cost for flying and accommodation for counsellors are paid by the schools. Access to the internet has resolved this issue in most cases, as counselling can be done virtually, but not everyone has access to the internet. Most classes have less than 20 students per class and each class has an education assistant who are part of the community. Although the COVID-19 pandemic restricted services to the community, speech language therapy is a service that is vital for the community and was not discontinued. Rather, speech language therapy shifted to a virtual format and in-person sessions on-reserve were limited.

Schools on-reserve focus on the land, so there are a lot of cultural programs for children (SNC-Lavalin, 2022h). Learning also extends beyond social sciences, as the schools integrate seasonality into their program (e.g., camping in the spring). Having these cultural programs available and exclusive to remote communities also reinforces their cultural identity. Learning different perspectives is an important component in the program as this teaches children both Indigenous and western ideologies. However, long-distance options for post-secondary education are not available for the community. Not all children attend school on-reserve as they follow their family off the reserve for various personal reasons, such as medical care. The school has 15 teachers, which includes a mix of people from the community and people from outside the community.

One of the limitations of schools on-reserve, and schools in remote communities in general, is lack of opportunities for partnerships and collaborations (SNC-Lavalin, 2022h). The main barrier preventing access to partnerships and collaboration is the remoteness of the community. Access to the internet has made it possible for students in the community to connect to mentorship programs via virtual conferencing, alleviating the need for students or mentors to fly-in or out of the reserve. Remote conferencing also alleviates the costs and time associated with travelling, making it a good alternative method of attaining mentorship. Partnerships with colleges and universities, such as Lakehead University, would also be beneficial for Webequie First Nation as they would provide members within the community to take on more specialized roles that can only be obtained through post-secondary education, such as psychologists and speech therapists.

Partnerships that are available for the community include the Outside Looking In program, dance programs, Future Leaders Program, and the Learning Bird Program. In the dance program, choreographers fly up to the community once a month and stay for up to a week to teach the children. Best performing students in the dance program are invited to attend a dance camp in Toronto for four to five weeks and are eligible for the Future Leaders Program. The Learning Bird Program teaches children Indigenous language and culture via activities and lessons.

Members that return to school to pursue post-secondary education are generally female, which may be a result of fewer employment opportunities for women (SNC-Lavalin, 2022h). For members who are interested in pursuing post-secondary education or distance education, the community provides financial aid when possible. Many distance

education courses, for instance, are paid for by the community. Members of the community are generally not pressured to pursue post-secondary education as many tasks within the community do not require post-secondary education. Additionally, some certifications obtained from training programs cannot be transferred to other universities/colleges, resulting in some certifications becoming useless.

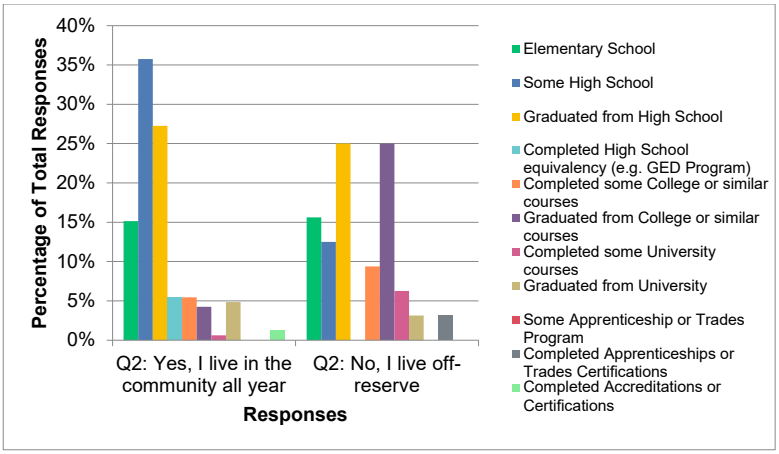
Due to the COVID-19 pandemic, the community and the world had to adjust to the new government and health regulations to prevent spread of the disease. This caused a shift towards virtual meetings, which reduced costs of needing to fly-in and out of the reserve and caused more people and organizations off the reserve to offer more virtual services, such as counselling. The shift towards virtual meetings also provided an opportunity for members of the community to experience new technology for the first time (SNC-Lavalin, 2022h). Members are also now able to more readily access training programs and counselling that were previously inaccessible to the community. Although not all homes have a good connection to the internet, the school has reliable access.

Education within the community is well supported (SNC-Lavalin, 2022h) and funding is available, but the distribution of funds is not fully understood by the community as there have been situations where there was no funding for Webequie First Nation but it was understood that other communities were funded. Students that have gone outside of the reserve for school have found it difficult as they experience culture shock and financial problems. Culture shock is inevitable for any member of the community that plan to pursue education off the reserve, but having distance education courses could provide students in the community an opportunity to experience education outside of the community and determine whether they prefer to study on or off the reserve. There are concerns that when the Project is completed, children will be interested in leaving the reserve, especially older youths (i.e., 17 to 18 years old).

Schools on-reserve also lack the technology and physical space to function efficiently (SNC-Lavalin, 2022h). The school lacks a library, computer room and staff room, which have all been repurposed into classrooms. The lack of physical space also means that the high-school students do not have their own space. School infrastructure also needs to be repaired, maintained and upgraded. The community is hopeful that economic development revenues resulting from mining and infrastructure projects will facilitate more money and technology to alleviate these problems. An all-season road will also provide easier access to resources.

An online survey was conducted by SNC-Lavalin to collect data from individuals living on-reserve and off-reserve on their level of education. When individuals were asked about the highest level of education they completed, responses differed between those who live on-reserve and those that live off-reserve. For individuals that live on-reserve, 59 out of 165 responses (35.8%) indicated that some high-school (i.e., having attended high-school but not graduated) was the highest level of education completed, as shown on Figure 3-5. For individuals that live off-reserve, a quarter of the responses (8 out of 32 responses) indicated that the highest level of education completed was having graduated from high-school, and another quarter of the responses indicated that the highest level of education completed was having graduated from college or similar courses. Overall, most individuals that responded to the survey indicated that education up to high-school was the highest level they completed, while very few individuals indicated that they completed post-secondary levels of education (college and university) and apprenticeships or trade certifications.

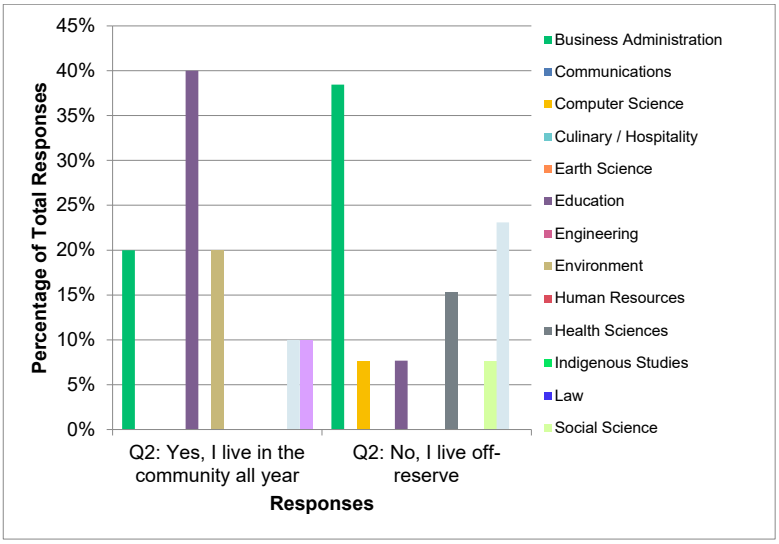
Figure 3-5: Highest Level of Education Completed by Webequie First Nation – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022a

When individuals were asked about the field of study they took in school, education was the most common response from individuals that live on-reserve (8 out of 20 responses; 40%), while business administration was the most common response from individuals that live off the reserve (5 out of 13 responses; 38.5%), as shown on Figure 3-6. Among all responses, several fields were not studied by any of the respondents, which includes communications, culinary/hospitality, earth sciences, engineering, human resources, Indigenous studies, and law.

Figure 3-6: Field of Study from Individuals Living on and Off the Reserve – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022a

3.5 Emergency and Protective Services

Many fly-in First Nation communities have limited access to Emergency and Protection Services. These services are often not available within the community which must then rely on services such as emergency medical care provided off the reserve. This section describes the existing conditions of emergency and protective services using the following indicators:

- Demand for community emergency and protective services; and
- Supply and capacity of community emergency and protective services.

These indicators were selected to determine emergency and protective services that are available within the Webequie First Nation, and those services that are either not available to the community or are only available outside the community. Emergency and protective services include police services, fire services, and emergency medical services (EMS). Information was primarily collected through the 211 Ontario North website and municipal/community websites.

The Socio-Economic Baseline includes a description of the following emergency and protective services where information is available within the communities:

- Police;
- Fire; and
- Emergency Medical Services.

Police: Nishnawbe Aski Police Services (NAPS) operates a detachment in the community. Webequie has two local constables who are both members of the Webequie First Nation. (NorthWest Healthline, Nishnawbe Aski Police Service, 2023).

Fire: Webequie First Nation has outlined that fire services in Webequie are non-existent except for pumps at the water treatment plant (Webequie First Nation, 2019). There are existing hydrants installed but were noted to not be functioning in 2019 (Webequie First Nation, 2019). The Webequie CCP outlines that there is a fire hall on-reserve, but it is currently not in use (SNC-Lavalin, 2021). There is a volunteer fire department within the reserve that focuses on fire prevention and administration of the Ontario Fire Code. The volunteer fire department also issues applicable burn permits and provides education, emergency planning, fire investigation, fire suppression and home safety information (211 Ontario North, Webequie First Nation, 2023d).

EMS: Webequie currently has no EMS on-reserve, if emergency care is required, an air ambulance is dispatched to Webequie to transport the patient out of the community. Patients are usually transported to a hospital in Sioux Lookout, Thunder Bay or Winnipeg (211 Ontario North, Webequie First Nation, 2023b).

3.6 Community Infrastructure

This section describes community infrastructure, including community roads, electrical power systems, drinking water management systems, wastewater management systems, solid waste management systems, telecommunications systems, and other infrastructure using the following indicators:

- Demand for community services and/or infrastructure; and
- Supply and capacity of community services and/or infrastructure.

These indicators were selected to define community infrastructure that is available in the Webequie First Nation, community infrastructure that is needed, and the condition of the infrastructure (i.e., if infrastructure requires upgrading and/or repair). Information was collected from various websites, including municipal/community websites, service provider websites (e.g., Hydro One), and federal and provincial sources (i.e., Government of Canada, and Government of Ontario).

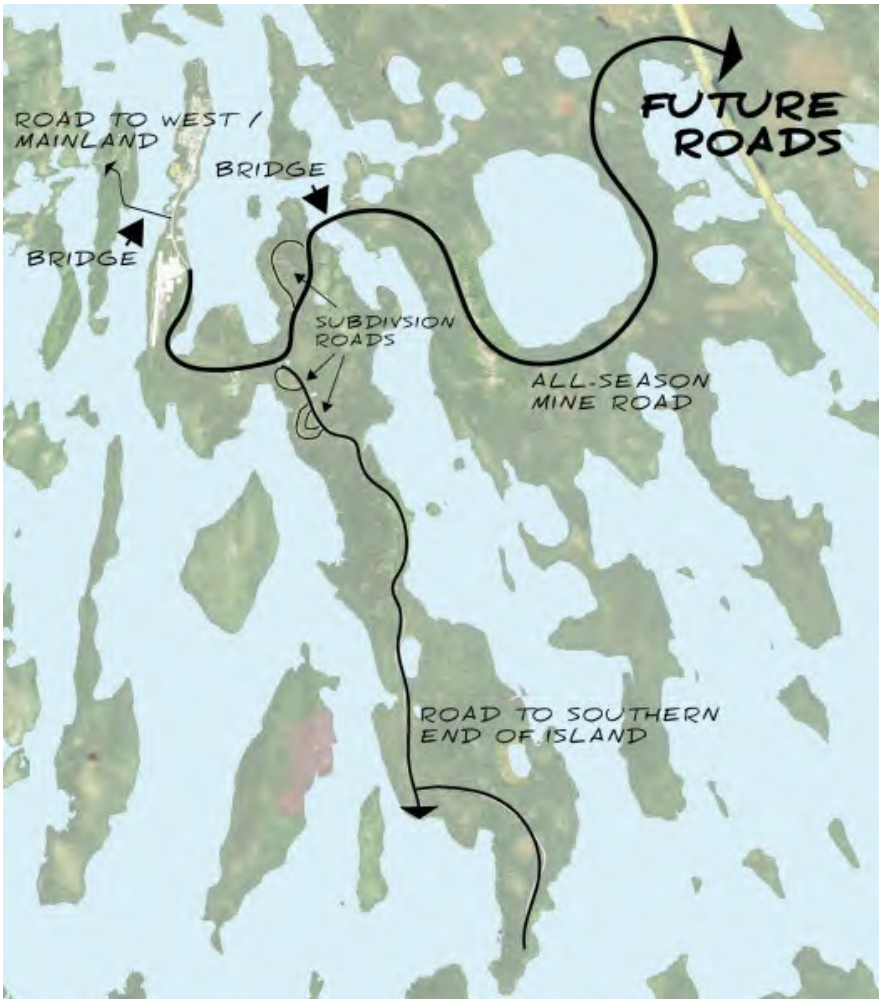
Webequie First Nation prepared a draft On-Reserve Land Use Plan in 2019, through First Nations Land Management federal program (Indigenous Services Canada, 2022), which included a participatory community engagement process to gather input from community members on needs, issues, values, and aspirations for on-reserve land use. Table 3-14 provides a description of the Webequie community infrastructure and available information on performance gaps, condition, capacity and upgrade projects, based on the On-Reserve Land Use Plan, with updates since the planning process was completed.

Table 3-14: Description of Community Infrastructure in Webequie

Community Infrastructure	Description of Current System	Performance and Upgrades Planned
Community Roads	There are 14 km of roads in the community. These are either gravel or earth- type roads, which connect the community from the airport in the south, to the point at the north end of the community, creating several large loops. Roads also provide access to the landfill and band storage facilities (Webequie First Nation, 2019b).	Future roads on-reserve being considered by the community are illustrated on Figure 3-7. A road to the south of Eastwood Island would include potential subdivision roads for future housing. The community is also considering potential bridges both the west and to the east, connecting Eastwood Island to the mainland (Webequie First Nation, 2019b).
Electrical Power System	Webequie has a 1-megawatt diesel generating station. The generating station has 3 generators that range from 400 to 1,000 kilowatts (kW). Installed in 2012, the generating station had a capital investment of $17 million (TBT Engineering, 2023). According to Hydro One Remote Communities, the number of electricity customers in 2016 was 187 (Hydro One Remote Communities, 2017).	Up to 2022, Hydro Projected Webequie's number of electricity customers to increase slightly to 211 customers (Hydro One Remote Communities, 2017).
Drinking Water Management System	*Water intake, storage, treatment and distribution* Webequie's water treatment plant consists of a low-level lift station, two full treatment package units, high lift pumps, a reservoir and the water treatment building (Webequie First Nation, 2019b).	Periods of water advisories: ▪ Jun 03, 2003 – Jun 27, 2007 ▪ Apr 02, 2009 – Oct 07, 2010 ▪ Apr 08, 2016 – Apr 24, 2018 (Drinking Water Advisories, 2023)
Wastewater Management System	*Sewage Collection and Treatment* The sewage treatment system consists of two Rotating Biological Contactor (RBC) units, a secondary clarifier, ultra-violet disinfection, and a digestor. It is fed by a gravity sewage collection system (Webequie First Nation, 2019b). The plant and lift stations were built in 1992; the step system in 1995, and the RBCs installed in 2006 (Webequie First Nation, 2019b). The community also has a sewage truck (2005) and a sewage truck garage (Webequie First Nation, 2019b).	In general, the sewage treatment system is in fair condition, though requires large maintenance and capital project investments to service current and future community needs (Webequie First Nation, 2019). The RBCs need to be upgraded or replaced approximately by 2031, and two boilers require replacement. The lift stations are in fair condition, with an estimated useful life to approximately 2027 (Webequie First Nation, 2019b). The step system requires maintenance to controls and pumps and has an estimated life remaining to 2039. Sanitary mains are in good condition as of 2019. The sewage truck requires some work to the transmission but is maintained and in fair condition. The garage is in good condition (Webequie First Nation, 2019b).
Solid Waste Management System	Webequie has two landfill sites; one full, and one recently constructed. The sites offer solid waste disposal and liquid waste disposal (Webequie First Nation, 2019b).	The current landfill site is full and has no open trenches. It is in fair condition, but requires a substantial amount of maintenance, including signage and segregation (Webequie First Nation, 2019b). The new site has been constructed but is not yet in use (Webequie First Nation, 2019b).

Community Infrastructure	Description of Current System	Performance and Upgrades Planned
Telecommunications System	Internet services are provided via cable network by Webequie Telecommunications. Webequie has two radio stations: C.S.P.N Radio (local station) and Wawatay Radio (via satellite) (Webequie First Nation, 2023c).	Internet service is available but slow (Webequie First Nation, 2019b). The Rapid Lynx long-haul fibre-optic network project will bring high-speed internet to Webequie. The project is funding by the province. The second phase of the project was planned to be underway by early 2023 and 57% of the line complete to-date (Daily Commercial News, 2022).

Figure 3-7: Webequie Future Roads



Source: Webequie On-Reserve Land Use Plan (Draft), 2019

The property manager and former Health Director expects that if the Webequie Supply Road is built, it will result in lower costs to building infrastructure and providing services to members of the community such as better health facilities, water and sanitation facilities and road network (Webequie First Nation, 2022j). The supply road could also have some social benefits where the increased number of infrastructure and services could lead to a lower cost of living, but could also bring more people into the community, which could lead to increased disruption to the community (i.e., crime, drugs, alcohol). The property manager also notes that the community should become more self-reliant and self-sufficient as the community should be able to sustain and maintain infrastructure and provide services for people on-reserve. Although the whole infrastructure system needs an upgrade, it is essential that construction happens with proper plans and taking into consideration the requirements of the community (e.g., health and social services building should be at a discreet location) and also the physical properties of the area such as permafrost (which affects construction) (SNC-Lavalin, 2022f).

Future plans for improving services for community well-being and safety within the community includes identifying and maintaining existing conditions and identifying additional infrastructure that may be required (SNC-Lavalin, 2022k). As outlined in the CCP, infrastructure maintenance must be recorded, which includes maintenance date, cost, and predicted costs for future maintenance. Asset management is also a component in the CCP, which includes identifying the existing condition, then anticipating needs for the future. For instance, there is not enough infrastructure for members to meet up and converse and play, especially for both youth and Elders, and as such additional facilities are needed.

Maintaining the water supply in the community is a challenge as the system needs to be upgraded every 10 to 15 years due to changes in the environmental conditions (SNC-Lavalin, 2022g) but there is not enough funding to maintain it (SNC-Lavalin, 2022k). Webequie has a history of boil water advisories, including from June 2003 to June 2007, April 2009 to October 2010 and April 2016 to 2018.

3.7 Transportation

Transportation and access to goods and services outside of communities is a key consideration for communities in Ontario's Far North. The only paved road in the Far North is Highway 599 (IBI Group & Hemson Consulting Ltd, 2016). For communities without all-season road access, remote airports running year-round connect communities to regional hubs to the south and other communities for services, and for the delivery of goods.

In addition, during the coldest weeks of winter with deep freeze conditions, communities use winter roads to connect them to all-season road networks and rail connections. The winter road season tends to be from mid-January to Spring thaw (Ontario Ministry of Northern Development, 2023). Hauling heavy bulk supplies is more cost effective and critical for the communities to maintain supplies of fuel, water, housing materials, food and other goods (IBI Group & Hemson Consulting Ltd, 2016). Living in First Nation communities with no all-season roads has many implications including limited access and the high cost associated with travelling and shipping. the shortening of winter road seasons has been a matter of concern for Indigenous communities in Northern Ontario in recent years. More snow than usual and warm spells in the winter months disrupt transportation of goods and services over winter roads. Higher average temperatures expected to be the result of climate change have been observed to impact the viability of winter roads and have shortened the winter road season (CBC, 2023a, 2023b). With climate change, the duration of safe lake ice is also projected to decrease. A study has shown that a 1.5ºC (degree Celsius) increase in average temperatures due to climate change can lead to 90 % of current ice roads no longer being sustainable (Woolway et al, 2022).

For generations, Indigenous communities have relied on waterways in various ways including for travel to support community life. Waterways are recognized to be vital to the sustainability of communities.

This section describes the transportation options available using the following indicators:

- Road transportation;
- Air transportation; and
- Waterways.

The Pickle Lake/Webequie Winter Road Corridor connects Webequie First Nation to the Northern Ontario Resource Trail (NORT) winter road system to Highway 808, the all-season road that runs north from Pickle Lake. The Webequie Winter Road Corridor is one of three winter road systems connecting communities to the NORT. The Webequie Winter Road Corridor connects four First Nation communities (Webequie First Nation, Nibinamik First Nation, Neskantaga First Nation, and Eabametoong First Nation).

Webequie First Nation traditional territories are within the secondary watersheds of the Lower Albany River Watershed, the Attawapiskat River, and the Ekwan River – Coastwatersheds (Government of Ontario, 2023).

Eabametoong First Nation has access to both scheduled and charter air transportation services via Wasaya Airlines, Thunder Airlines (Thunder Airlines, 2023), SkyCare (SkyCare, 2023) and Air Creebec (AirCreebec, 2023).

3.7.1 Winter Road Traffic Volumes in the Local Study Area

Limited information is available on winter roads daily traffic counts. An available study taken from the 2015 2016 winter road season saw the Ministry of Northern Development and Mines install vehicle induction counters on certain winter road corridors, which included the Webequie, Kingfisher and North Caribou Winter Road Corridors (IBI Group & Hemson Consulting Ltd, 2016).

Data obtained from the study indicated daily average traffic ranged from 30 to 70 vehicles per corridor (travelling in either direction), with peak daily traffic as high as approximately 60 to 110 vehicles per corridor (IBI Group & Hemson Consulting Ltd, 2016). Traffic tends to ramp up towards the end of the winter road season, with the highest traffic (approximately 300 to 500 vehicles per week per corridor in 2016) occurring approximately mid-February to near the end of the season (IBI Group & Hemson Consulting Ltd, 2016).

3.7.2 Waterways in Webequie First Nation Traditional Territory

A waterway is a route of travel by water. In the Far North of Ontario, waterways hold historic and current importance to communities. Historically, waterways were a primary means of transportation and communication for Indigenous Peoples and European settlers (Hutton and Black, 1976). The waterways have been referred to as “highways” historically, as they provide the means to travel vast distances in the Far North, as seen with Anishiniimowin/ Anishinabe/Mushkeego way of life (Webequie First Nation, 2023b).

European settlement during the fur trade saw the initial establishment of the Fort Albany post on the James Bay coast, and the first inland post at Henley House approximately 250 km up the Albany River (Hutton and Black, 1976). The Albany River was a significant advantage for the European fur trade as it provided a means to travel to its headwater lakes and across to the English River to the west and Lake Superior watersheds to the south. Eventually historic fur trading posts were established along the major rivers in Ontario’s Far North, and they successfully drew in First Nations communities as part of the trade (Hutton and Black, 1976). The Métis as a people became a distinct culture at this time.

Although the establishment of the railway and air transportation systems resulted in reduced reliance on water travel (Hutton and Black, 1976), Indigenous communities remain deeply connected with traditionally used waterways for social, economic and cultural purposes. Waterways also continue to be a focus of recreation and tourism for residents and visitors to the region.

Water is an important aspect of the Webequie community's way of life:

> "Water is the most precious element in our livelihood, cultural beliefs and traditional practices. We, the Anishinawbek see water as a gift from Keyshay-Maniido (Creator). Healthy rivers and lakes are a cultural and spiritual necessity for the people as well for all beings. Niibee (Water) gives life to the people and the beings upon which Anishinawbek depend for our way of life. The series of lakes, wetlands and interconnected streams and rivers in our area support healthy fish and wildlife populations that sustain the people. These waterways are central travel routes for Anishinawbek as we continue to practice our traditional way of life. Niibee is also a medicine used for the well-being of the individual" (Webequie First Nation, 2019).

Webequie First Nation has historical and current interest in waterways in the Winisk tertiary watershed (Upper and Middle) which includes Winisk Lake, where the Webequie community settlement is located. The 'sWinisk River flows north to Hudson's Bay. The Winisk River has a series of complex maze-like channels that lead to and from other waterbodies (Webequie First Nation, 2019). To the east, Webequie has an interest in the Upper Ekwan and Lower Attawapiskat tertiary watersheds, which flow east to James Bay (Webequie First Nation, 2019).

3.8 Community Well-Being and Safety

3.8.1 Community Well-Being

Community well-being and safety are critical factors in identifying the condition of First Nation communities. Despite improvements in-community well-being to First Nation communities over the last 35 years, the Socio-Economic gap between First Nation communities and non-Indigenous communities remains (Statistics Canada, 2019b). Safety is a principal concern among First Nation communities due to historical and intergenerational trauma persisting throughout Canada, and many First Nation members experience racism as a result (Perrault, 2022). The Socio-Economic Baseline provides information that will enable the assessment of effects on community well-being and safety.

This section describes the existing conditions of community well-being and safety using the following indicators:

- Social cohesion and culture;
- Participation in social and/or cultural events;
- Safety; and
- Nuisance.

One comparative measure of community well-being is the Community Well-Being (CWB) Index. The CWB uses four key Socio-Economic factors (education, income, labour and housing) to measure the well-being of communities across Canada and throughout time. For each community, a score is calculated for each of the four Socio-Economic factors, as well as an overall well-being score based on a combination of all these factors, which is used to compare well-being among Indigenous communities, and between Indigenous communities and non-Indigenous communities. The data presented in this section are provided by the 2016 Census of Population data (most recent dataset) (Statistics Canada, 2017a). It is important to note that "well-being" means different things to different people and the scores from the CWB are only one aspect in determining the well-being of a community. The four factors used to score the CWB are used as they are important topics that are part of people's overall "well-being."

The four socio-economic factors used in the scoring of the CWB:

- Education - based on how many community members have at least a high-school education and how many have acquired a university degree;
- Labour Force Activity - measures how many community members participate in the labour force and how many labour force participants have jobs;
- Income - calculated based on a community's total income per capita; and
- Housing - based on the number of community members whose homes are in an adequate state of repair and are not overcrowded.

Table 3-15 presents a summary of the overall CWB scores and individual scores for each of the four Socio-Economic factors for the Webequie First Nation community, as well as the average overall score for First Nations in Ontario and Canada.

Table 3-15: CWB Index Scores for Webequie First Nation

Community	Overall	Education	Labour	Income	Housing
First Nations in Canada	**58**	**40**	**69**	**54**	**71**
First Nations in Ontario	**59**	**38**	**72**	**53**	**70**
Webequie First Nation	45	19	73	45	44

Source: Indigenous Services Canada, 2019b.

Webequie First Nation has a low CWB score for education (19), in comparison to First Nations in Canada (40) and First Nations in Ontario (38).

The Webequie First Nation score for income score is 45, which is slightly lower than the First Nations in Ontario (53) and First Nations in Canada (54).

Webequie First Nation has a housing score of 44, which is much lower than First Nations in Ontario (70) and First Nations in Canada (71).

However, the labour score of 73 for Webequie, is higher than both the First Nations in Ontario (72) and First Nations in Canada (69)

The overall CWB score of 45 for Webequie First Nation is below average in terms of overall community well-being in comparison to First Nations in Ontario (59) and First Nations in Canada (58).

A Webequie First Nation Community Well-Being Study was completed in June 2014. Community members were invited to participate in multi-day discussions and data collection events in the community, with meals provided. A total of 96 household surveys were completed in April 2014, which represented 66% of the 145 on-reserve private dwellings in Webequie (Statistics Canada, 2021).

A summary of the seven well-being indicators assessed in the study is presented in Table 3-16. This includes:

- Community health;
- Environmental quality and relationships with the land;
- Cultural vibrancy and traditional practices;
- Family and social conditions;
- Economic development;
- Housing and infrastructure; and
- Community leadership governance.

Table 3-16: Summary of Webequie First Nation Community Well-Being Study

Well-Being Indicator	Component	Summary
Community Health	Physical Health and Exercise	▪ One or more members from 64% of households diagnosed with diabetes, obesity, or heart disease. ▪ One or more members from 90% of households participate in light exercise (e.g., walking, gathering wood, casual sports). ▪ One or more members from 60% of households participate in strenuous exercise (e.g., running, canoeing, fast-paced sports). ▪ 63% of households required out-of-town medical treatment for at least one member, between 2013 and 2014. Almost half of these medical trips (49%) included members that needed to be sent out four or more times.

Well-Being Indicator	Component	Summary
	Diet and Food Security	▪ 90% of households are unable to afford healthy balanced meals. ▪ 94% of households were affected by some form of food insecurity (i.e., did not have enough food, skipped meals, or reduced portion sizes). ▪ 10% of households do not typically consume country foods (e.g., local fish and game meat, berries, and other traditionally harvested items). ▪ Only 45% of households include traditional food items in their meals two or more times a week.
Environmental Quality and Relationships with the Land	Drinking Water Quality	▪ 27% of households had fair to poor drinking water quality, 47% had good quality, and 26% had excellent quality.
	Game Species	▪ 26% of households reported encountering abnormalities in harvested wildlife (e.g., bumps or lesions on fish). ▪ The Webequie community has expressed interest for a study on the quality and quantity of game species harvested each year to be conducted with local harvesters.
Cultural Vibrancy and Traditional Practices	Language	▪ 19% of households speak Oji-Cree in some or none their everyday household conversations; 81% households speak Oji-Cree in half or more of their conversations. ▪ 76% of households have had at least one member improve their Oji-Cree proficiency within the last year.
	Traditional Activities (Hunting, Fishing, Trapping, Gathering)	▪ Trapping was practiced the least (40% of households). ▪ Fishing was practiced the most (over 80% of households).
	Traditional Land Use	▪ 70% of households had at least one adult member spending four or more consecutive days on traditional land within the last year. 48% of these households spent a total of 14 or more days. ▪ 40% of households had youth and children spending four or more consecutive days on traditional land. 20% of these households had youth and children spend a total of 14 or more days on traditional land.
	Traditional Knowledge	▪ 61% of households had one household adult teach traditional knowledge or skills to their children. ▪ 78% of households reported that at least one member learned or improved a traditional skill.
Family and Social Conditions	Inter-Household Helping and Sharing	▪ Over 60% of households sometimes or regularly share food, wood, or help others. Sharing food between households was the most common practice.
	Community Activities and Events	▪ Over 75% of households participate in-community sports, community events, or charity events. Community events were the most attended of the three types of community activities (over 90% of households attend community events).
	Cultural Activities	▪ Approximately 95% of households had at least one member participate in cultural activities (pow-wows, dancing, sport events, other culture-focus events) three or more times per year.
	Community Safety and Trust	▪ 71% of households with children under the age of 12 often or sometimes allow their children to play outside unsupervised (21% often and 60% sometimes). ▪ 27% of households had their houses vandalized in the past year. 75% of households that were victims of vandalism reported that it only occurred once.
Economic Development	Education	▪ Community views members leaving for university with the intent to return upon graduation aligns with community values. ▪ However, youths leaving the community to attend education programs that are not in the community is seen as an issue. ▪ 17% of households had one member attending school outside of the community; no households had more than one person attending school outside the community. ▪ Over 60% of households have at least one member that has completed high-school or adult education equivalent.

Well-Being Indicator	Component	Summary
		▪ 23% of households have at least one member with a college or university degree. ▪ Only 19% of households do not have any members with some form of formal education.
	Economic Independence	▪ Community members emphasize economic independence over economic development. ▪ More households have one or more members working full-time than part-time (64% full-time versus 42% part-time). ▪ Public service work (e.g., band office) is the most prominent work employer in the community as over 30% of households have a member working in this field. ▪ Other jobs include locally owned businesses (17% of households), Aboriginal-owned businesses (9%), and mining (8%).
Housing and Infrastructure	Concerns	▪ Community expressed a need for mould-proof homes, homes with six or more bedrooms, funds for repairs. ▪ Average homes have 4 to 5 rooms (inclusive of kitchens and common rooms) with 4 to 5 people living in them. On average, this means that homes with more than the average number of household members are experiencing overcrowding issues. ▪ 82% of homes in the community are in need of repair. Repairs include replacing missing or loose floor tiles, bricks or shingles; broken steps; railings; siding; defective plumbing or electrical wiring; and structural problems with the walls, floors, and ceilings. ▪ Utility bills are a considerable financial challenge for many households (83% and 90% of households have financial difficulty paying electricity and fuel (wood), respectively).
Community Leadership and Governance	Community Governance	▪ Community governance includes attending community meetings; accessing information on Chief and Council decisions and initiatives; becoming aware of community reports; and participating on community committees. ▪ 95% of respondents had at least one or more household members engage in some form of community governance.

Source: Webequie First Nation, 2014.

Based on an interview held with an esteemed Elder in the community, it was noted that young members of the community experienced many challenges with living on-reserve (Webequie First Nation, 2022h). One of the challenges is a lack of aid and assistance programs for issues such as substance abuse, depression and mental well-being that are inaccessible to youth due to a lack of funding. The community is currently looking for ways to help the youth through new funding opportunities.

Mental and physical well-being as well as drug and alcohol addiction were also mentioned by the Health Director. Although these issues are prevalent, Webequie First Nation hosts events for the community in the summer, which includes sporting tournaments such as floor hockey and broomball; special events such as talent shows, games, youth weeks; and cultural events such as pow-wows, drum groups, ribbon-making, wild game and fish cooking (SNC-Lavalin, 2022b). The inconsistency of these programs, as it is for building trust and companionship within the community, and the need for it to be a service that should be offered throughout the year, was noted by a Councillor. Cultural activities that could be implemented if services were more consistent include taking youth out on the land, sightseeing, and visiting special sites where significant events have occurred, and sharing of Indigenous Knowledge by Elders and other senior members of the community (SNC-Lavalin, 2022c). Health resources, such as trauma-informed practices, along with counselling services and qualified counsellors are also needed in the community on a regular basis (SNC-Lavalin, 2022h).

The Choose Life Program is a program developed by the Nishnawbe Aski Nation to verify that no First Nation community would be denied funding for programs that promote mental, emotional, and behavioural well-being for youths (Nishnawbe Aski Nation, 2023). The program also provides immediate funding relief for youth at risk of suicide.

According to an interview with the Councillor, the program is well received by youth in the community, particularly due to how the program is handled and the method of presenting the program to the youth (SNC-Lavalin, 2022c). The program also promotes the learning of local culture and activities for youth (SNC-Lavalin, 2022k).

Due to the remote nature of the community, youth feel isolated from the world outside of Webequie, which can result in them turning towards alcohol and drugs. The feeling of isolation may be a result of a lack of infrastructure and access to the land; and the high cost of transportation due to the special equipment that is required to travel around, such as a watercraft or snowmobile. There are programs and people that help with alcohol and drug prevention, such as drug abuse social workers (SNC-Lavalin, 2022c). However, alcohol and drug related problems are reviewed as a stigma, so the community needs to be able to trust the social workers in order to initiate the rehabilitation (SNC-Lavalin, 2022g).

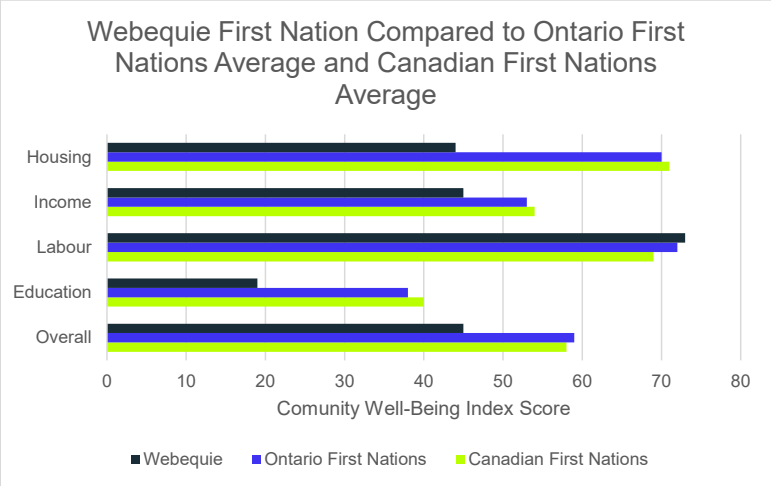
Trauma is another major concern within the community, particularly historical trauma associated with colonization, and subsequent drug abuse and addictions that have been taken on as coping mechanisms for the stress associated with the trauma (SNC-Lavalin, 2022k). Some members of the community have attended residential schools and the trauma that they experienced continues to impact their personal and family life, creating stress while performing daily tasks such as raising children. Because most of the trauma of the community is unresolved, members accumulate stress throughout their life and sometimes resort to substances to cope with it. Addictions in the community include gambling, gaming (in the case of children), alcohol, and drugs. The community has a suboxone program that helps people with opioid addiction, and potential solutions for addressing trauma within the community include land-based healing and youth training (SNC-Lavalin, 2022e). Two-spirited and other LGBTQ+ groups in the community are disproportionately affected by this trauma due to a lack of understanding of gender identity topics and this is especially difficult to address because there are not many social services that help with these types of issues. The period when members attended residential schools also had cultural impacts, as there was a loss in identity, parenting skills and knowledge (SNC-Lavalin, 2022f).

Better addressing these social and health issues plus issues that arose during the COVID-19 pandemic, are being viewed by members of the community as an opportunity to improve the community well-being.(SNC-Lavalin, 2022l). According to the Chief, because the community has a small population, any issues faced by individuals are experienced by the whole community. Due to the poor quality of life, poverty, high cost of living, and impoverished living conditions, many members of the community are not focused on the future and are more focused on surviving each day (SNC-Lavalin, 2022f).

The Women's Group conducts workshops with women in various age groups (e.g., 45-55, 55-65, and 65+), to aid the women with mental health problems; learning language and developing oneself as a First Nations person; and learning how to develop and keep strong self-identity and values (SNC-Lavalin, 2022f). Women in the community face several barriers to accessing services, lands, and resources, including trust issues, childcare (especially for single parents/grandparents), language barriers, nepotism, transportation, long waitlists for medical services, inactive aftercare program and follow-up services, lack of privacy while receiving counselling, lack of support from families, and lack of communication (SNC-Lavalin, 2023).

Based on the Webequie First Nation's Community Well-being Index (CWB) scores, 3 out of the 4 Socio-Economic factors (housing, income, and education) are lower than the average CWB scores for both the First Nations in Ontario and the First Nations in Canada, as shown on Figure 3-8. The difference between Webequie First Nation and the Ontario and Canadian First Nations average CWB scores is greatest in housing, where Webequie First Nation has a score of 44 while the Ontario and Canadian First Nations averages are 70 and 71, respectively (26-27 point difference). Labour is the only Socio-Economic factor where Webequie First Nation's score (73) is higher than both the First Nations in Ontario average (72) and the Canadian First Nations average (69).

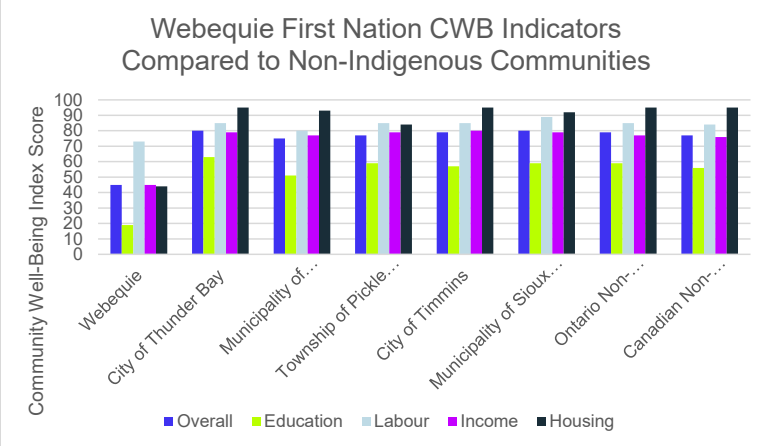
Figure 3-8: CWB Index Score for Webequie First Nations Compared to the First Nations in Ontario Average and First Nations Average in Canada



Source: Indigenous Services Canada, 2019b.

Webequie First Nation also has lower CWB scores for all 4 Socio-Economic factors than non-Indigenous communities, as well as Ontario First Nations and Canadian non- Indigenous communities. The overall CWB score for Webequie First Nation is also lower than the score for non-Indigenous communities as shown on Figure 3-9. The greatest difference in scores between Webequie First Nation and non-Indigenous communities is in housing; Webequie First Nation has a CWB score of 44, while the lowest non-Indigenous community score is the Township of Pickle Lake, with a score of 84 (40 point difference). Webequie First Nation's CWB score for labour (73), although lower than non-Indigenous communities, is the most comparable as the lowest non-Indigenous community score is the Municipality of Greenstone with a score of 80 (7 score difference).

Figure 3-9: CWB Index Score for Webequie First Nation Compared to Non-Indigenous Communities



Source: Indigenous Services Canada, 2019b.

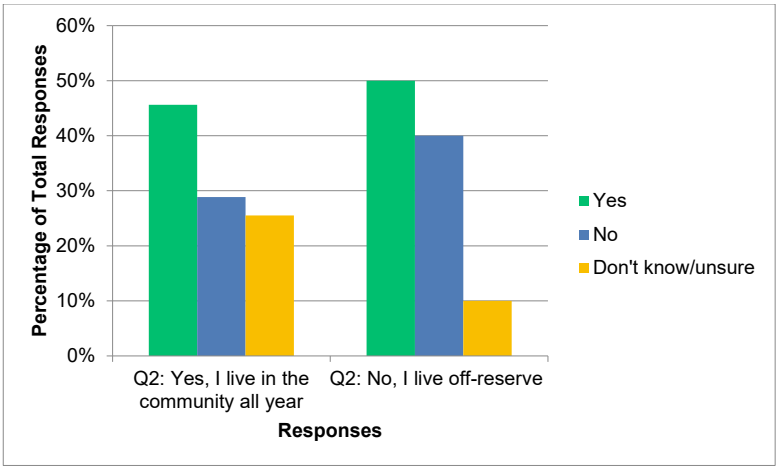
3.8.2 Safety

Based on the Webequie First Nation Community Well-Being Baseline Study conducted in 2014, members of the community trust one another, as 71% of households that participated in the study, and have children 12 years old or younger, indicated that they often or sometimes allow their child to play outside without any supervision (Webequie First Nation 2014). Additionally, 73% of households that participated in the study indicated that they had not experienced house vandalization within the past year; the 27% that reported having experienced vandalism indicated that it was a one-time occurrence and that multiple incidents of vandalism were experienced by a small minority of the community. According to the WSR Community Coordinator, lateral violence is also present in the community, especially in the workplace (SNC-Lavalin, 2022e).

According to the Webequie First Nation's Health Director, there are services available for members of the community to seek family services/aide, including the Family Resource Centre, which is located on the Webequie First Nation Reserve for mothers or children dealing with violence in the community and the Tikinagan Child and Family Services (SNC-Lavalin, 2022b).

When asked whether individuals had safety concerns with the Project and potential future mining development in the area, 45.6% of responses from those living on-reserve and 50% of responses from those living off-reserve indicated that they had safety concerns, as shown on Figure 3-11.

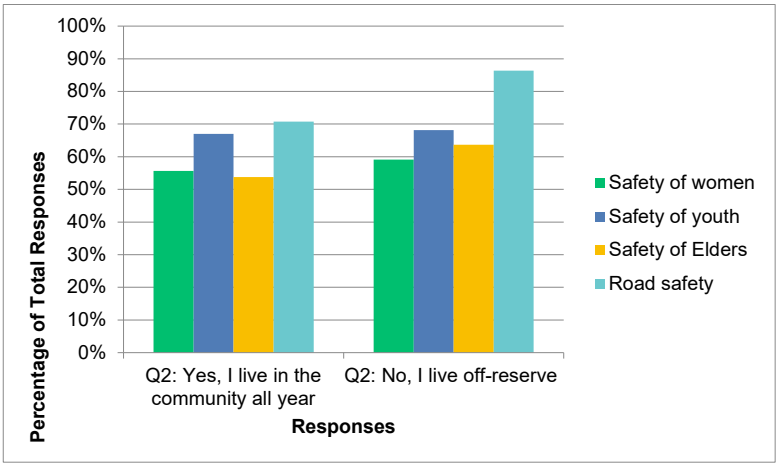
Figure 3-10: Survey Results from Respondents When Asked If They Have Safety Concerns About the Project - WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022.

As a follow-up question, individuals were asked what these safety concerns were. Respondents identified four main safety concerns: safety of women, safety of youth, safety of Elders, and road safety, as shown on Figure 3-12. Respondents were encouraged to identify more than one safety concern. A total of 128 responses were collected for this question (106 responses from individuals that live on-reserve and 22 responses from individuals that live off-reserve). Out of the 128 responses collected, 94 of the responses (73.4%) indicated that road safety is a concern, making it the most frequent safety concern among responses, with 75 of the responses from individuals that live on-reserve and 19 responses from individuals that live off-reserve. Safety of youth was the second most identified safety concern by respondents, with 86 responses having included safety of youth as a safety concern (71 from those that live on-reserve and 15 responses from those that live off-reserve).

Figure 3-11: Safety Concerns Identified by the Community



Source: SNC-Lavalin, 2022.

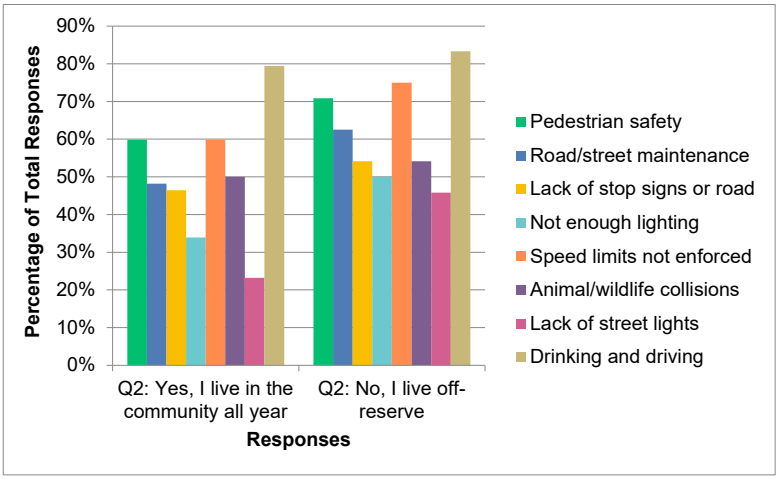
To further understand why road safety was considered by most to be a safety concern, a follow-up question asked respondents to state specific road safety concerns. The responses included: pedestrian safety, road/street maintenance, lack of stop signs or roads, not enough lighting, speed limits not enforced, animal/wildlife collisions, lack of streetlights, and drinking and driving, as shown on Figure 3-13.

A total of 112 responses were collected from individuals living on-reserve and 24 responses from individuals living off-reserve. The most identified road safety concern was drinking and driving; 79.5% of responses from individuals that live on-reserve included drinking and driving (89 responses) and 83.3% of responses from individuals that live off-reserve included drinking and driving (20 responses).

Based on data collected from the women's focus group, similar concerns were mentioned including the need for check points and approval from the Chief and Council for road use, checking drivers' license when leaving the community, road awareness signs, streetlights, signs for hunting areas, and more workshops on missing and murdered Indigenous women (Webequie First Nation, 2023a).

There is an opportunity to address the safety issues that were identified by Webequie First Nation members through targeted educational awareness, discussions with the community throughout the Project and the preparation of an Emergency Response Preparedness Plan. As road safety has been identified as a potential risk for this Project, Webequie First Nation has the opportunity to implement additional mitigation measures prior to construction of the Project to improve overall road safety within their community.

Figure 3-12: Road Safety Concerns Identified by the Community



Source: SNC-Lavalin, 2022.

According to the Canadian Centre for Justice and Community Safety Statistics, there were 182 police services or detachments in Canada responsible for serving Indigenous communities (i.e., communities where more than half of the residents are Indigenous) (Allen, 2020). These 182 police services had some of the highest crime rates among 1,200 police detachments in Canada, with Indigenous communities having six times higher crime rates than non-Indigenous populations. Ontario had one of the lowest crime rates reported in Indigenous communities (along with British Columbia).

Table 3-17 provides a summary of the crime rates based on available information and as reported by the noted police services in the RSA. The data are reported as rates of 100,000 people. Some First Nations communities are serviced by the Ontario Provincial Police (OPP). The OPP is a division of the Ministry of Solicitor General and is the largest police service in Ontario, and second largest police service in Canada (OPP, 2023). Part of the OPP's responsibilities for Indigenous communities is to provide administrative support for First Nation Policing programs. The NAPS reported the highest rates of crime across categories. NAPS area provides police patrols within Northern Ontario and serve 34 First Nation communities (Ketonen, 2023). NAPS often do not have the same resources that other police forces have with limited staff, budget and resources (Thompson, 2017). In 2017, Public Safety Canada outlined that crime rates in First Nations communities were four times higher than the average municipal rate (Thompson, 2017).

Table 3-17: Crime Statistics for 2021, as Reported by the Police Service Responsible for that Area

Municipalities	Total crime, rate, 2021*	Total violent crime, rate, 2021*	Total sexual assault, rate, 2021*	Total drug violations, rate, 2021*
Nishnawbe Aski Nation, municipal	26,412	9,421	553	649
Anishinabek, municipal	14,567	4,646	193	435
Kenora District, OPP, municipal	12,018	2,838	264	301
Thunder Bay District, OPP, rural	4,358	1,395	155	224

Source: Statistics Canada, 2022b.

Note: *Data are reported as rates of 100,000 people.

ECONOMIC ENVIRONMENT

AtkinsRéalis - Confidential

4. Economic Environment

4.1 Labour Force and Employment

First Nations people are under-represented in Canada's labour market (Anderson, 2019). This section describes the existing conditions of labour force and employment using the following indicators:

- Labour force characteristics, including employment, age, population, labour force participation, unemployment, barriers to employment, time spent on unpaid domestic work;
- Education and training attainment, including highest certificate, diploma, or degree, field of study, occupations, training opportunities; and
- Labour income, including income, sources of income.

Tradition is an important cultural piece in Indigenous communities who are very connected to the lands on which they live. This means there are specific guidelines for where economic activity can occur and how lands are used.

The traditional economy is another important cultural aspect within the communities. Unfortunately, traditional economy activities are not widely reported on and therefore it is difficult to quantify the economic impact they have within the communities.

4.1.1 Labour Force Characteristics

Table 4-1 presents the forecasted working age population in Webequie First Nation over the projection period: 2016, 2021, 2028, 2033, and 2043. The values for 2016 and 2021 are published statistics from the 2016 and 2021 Statistics Canada Census of Population (Statistics Canada, 2017, 2022a). The values for 2028, 2023, and 2043 were forecasted based on the 2016 and 2021 data. The working age population is defined as those aged 15 to 64. Projected trends of working age population in Webequie First Nation are summarized as follows:

- The working age population is decreasing over the projection period; and
- Based on current growth trends, the total working age population is forecasted to decrease by 140 between 2016 and 2043, a decline of approximately 31%.

Table 4-1: Projected Working Age Population in Webequie First Nation (2016, 2021, 2028, 2033, 2043)

Year	Total		Total		Total	
	Count	Distribution	Count	Distribution	Count	Distribution
2016	450	100%	220	48.9%	230	51.1%
2021	420	100%	190	45.2%	225	53.6%
2028	381	100%	155	40.6%	218	57.2%
2033	356	100%	134	37.6%	213	60.0%
2043	310	100%	100	32.2%	204	65.9%

Source: Statistics Canada, 2017; 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 4-2 presents the breakdown of the population in the labour force and those not in the labour force for Webequie First Nation in 2021.

- The majority of the Webequie population is not in the labour force at 61.7%. Females account for approximately 53% of this group while males account for 47%;
- The participation rate for the total working age population is 38.3%;
- The participation rate for males in the labour force is 38.6%; and
- The participation rate for females in the labour force is 39.2%.

Table 4-2: Labour Force Participation in in Webequie First Nation (2021)

Labour Force Participation	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
In the labour force	180	38.3%	85	38.6%	100	39.2%
Not in the labour force	290	61.7%	135	61.4%	155	60.8%
Total	**470**	**100%**	**220**	**100%**	**255**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 4-3 presents the breakdown of the employment status for those classified as being in the labour force for Webequie First Nation in 2021. Of the population classified as being in the labour force, 94.6% are employed making the unemployment rate 5.5%. This means the majority of the population that is looking for a job has one. Although their labour force participation is lower than the Ontario average, the unemployment rate is roughly on par with Ontario.

Table 4-3: Employment Status of Labour Force in Webequie First Nation (2021)

Labour Force Status	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
Employed	175	94.6%	80	100%	95	100%

Table 4-4 presents the number of jobs by 1-digit National Occupational Classification (NOC) [2] code for 2018 and 2022 in Webequie. Business, finance, and administration occupations are the leading job category in Webequie with 69 jobs in 2022. This accounts for 22.6% of the total jobs.

Webequie First Nation experienced a large increase across all occupational categories between 2018 and 2022 (where possible to calculate) with an overall increase in jobs of 46% over 4 years. The occupational category with the largest percentage increase over the 4-year period was trades, transport and equipment operators and related occupations with a 65% increase.

[2] The National Occupational Classification (NOC) is Canada's national system to identify and categorize occupations based on the training, education, experience and responsibilities they require. The structure of NOC codes is hierarchical with five levels. The first level (1-digit) contains 10 broad occupational categories, the second level (2-digit) is made up of 45 major groups, the third level (3-digit) consists of 89 sub-major groups, the fourth level (4-digit) gathers 162 minor groups, and the last level (5-digit) comprises 516 unit groups.

Table 4-4: Occupations by Category Defined by National Occupation Classification in Webequie First Nation (2018 – 2022)

Occupation Categories	2018 Jobs	2022 Jobs	2018 - 2022 Change	2018 - 2022 % Change
Business, finance and administration occupations	44	69	25	57%
Natural and applied sciences and related occupations	<10	12		
Health occupations	11	17	6	58%
Occupations in education, law and social, community and government services	60	86	26	43%
Occupations in art, culture, recreation and sport	<10	<10

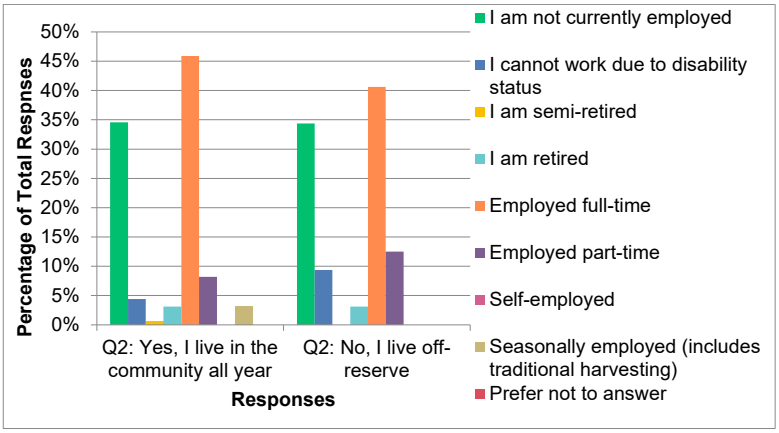
A 2022 Socio-Economic survey was conducted to collect data from individuals living on-reserve and individuals living off-reserve on labour force and employment in Webequie First Nation. When asked about employment status, most individuals living on-reserve who participated in the survey indicated that they are either employed full-time (73 out of 159 responses [45.9%]), or not currently employed (55 out of 159 responses [34.6%]) as shown on Figure 4-1 (SNC-Lavalin, 2022). The 2022 Socio-Economic survey and the 2021 Census are varied likely due to sampling differences.

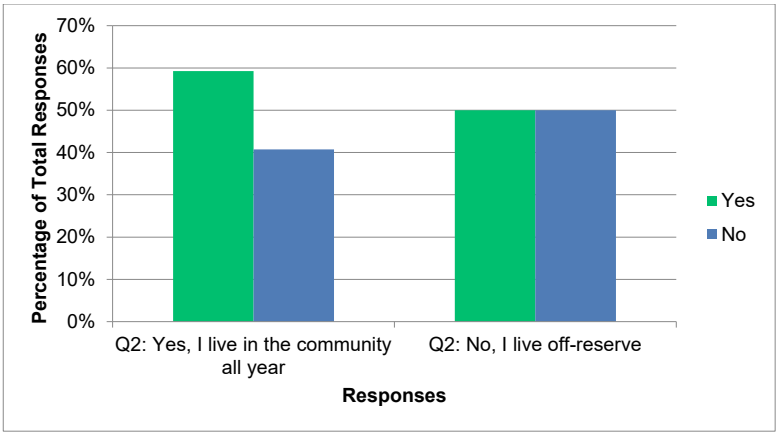
Figure 4-1: What is Your Employment Status? – Webequie First Nation, WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022.

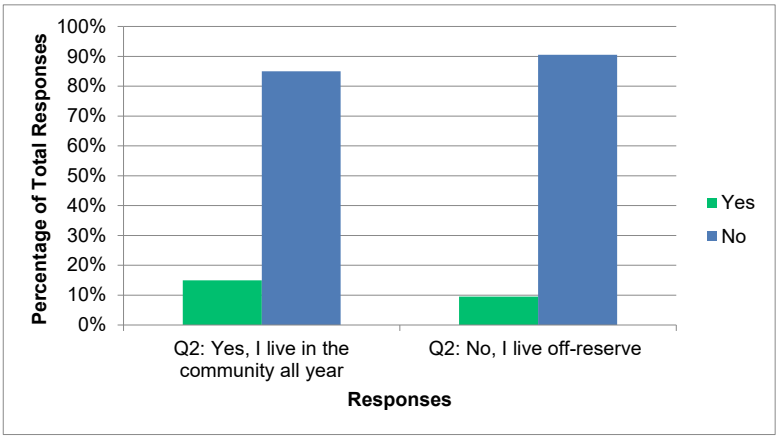
More than half of the individuals who responded to the survey that live on-reserve and are not currently employed (32 out of 54 responses [59.3%]) are searching for work as shown on Figure 4-2. For individuals that are employed, 85% of the respondents that live on-reserve do not own, operate, or work for a local, Indigenous-owned business, as shown on Figure 4-3 (SNC-Lavalin, 2022).

Figure 4-2: If You Are Not Currently Employed, Are You Searching for Work? – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022.

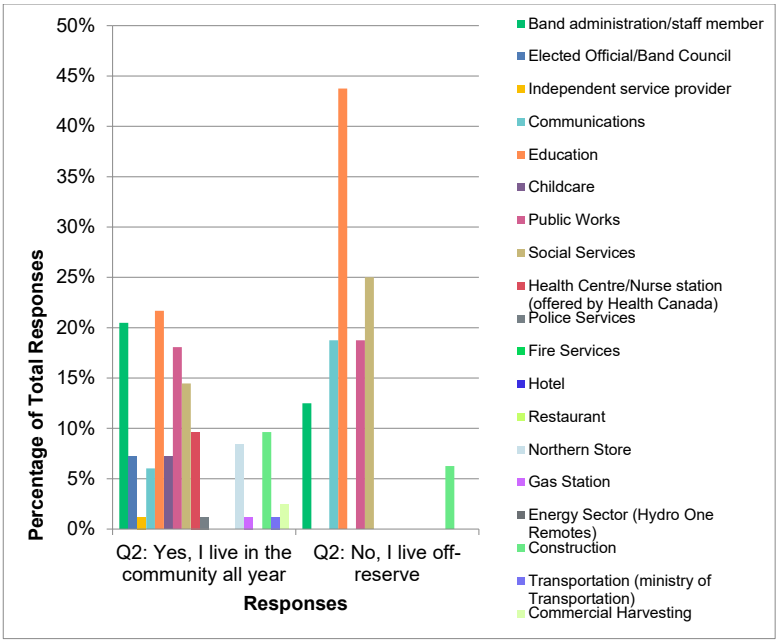
Figure 4-3: Do You Own, Operate, Or Work for A Local, Indigenous-Owned Business? – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022.

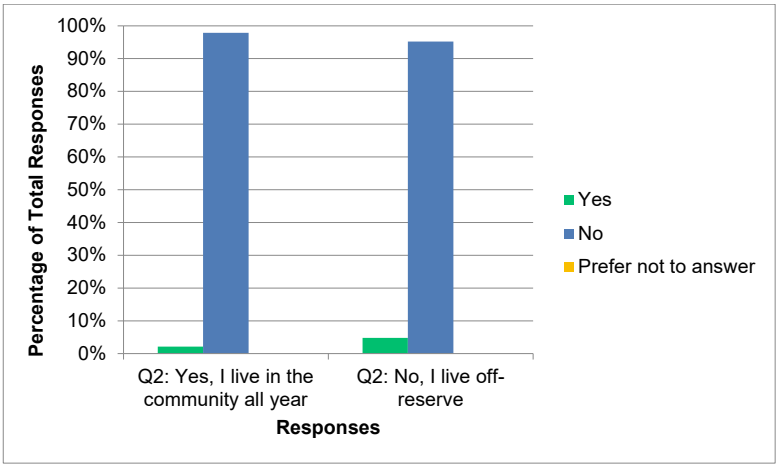
Of those who responded to the survey (83 responses), members living on-reserve mostly work in education (18 responses), band administration/staff member (17 responses), public works (15 responses), and social services (12 responses); none of the respondents living on-reserve indicated that they worked in fire services, hotels, restaurants, or the energy sector (i.e., Hydro One Remote), as shown on Figure 4-4. Very few members of the community work in the mining industry, as only 2 out of 93 responses (2.2%) from members living on-reserve indicated that they work in the mining industry, as shown on Figure 4-5 (SNC-Lavalin, 2022).

Figure 4-4: How Would You Classify Your Work Industry (Check All That Apply)? – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022.

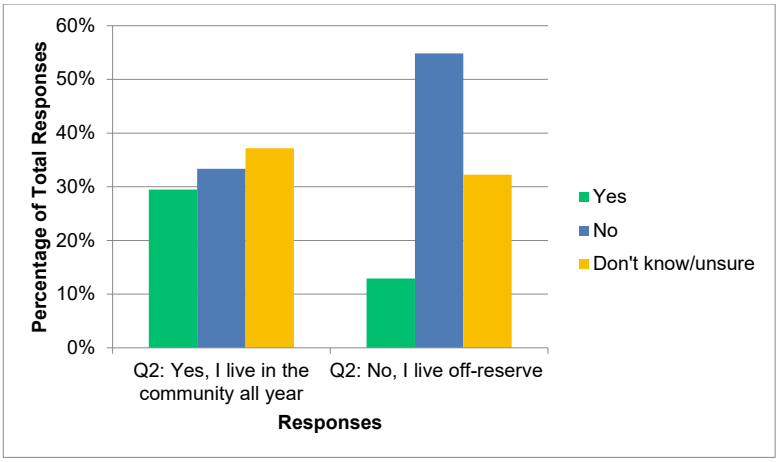
Figure 4-5: Are You Employed in Mining Exploration, or Other Mining-Related Industry? – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022.

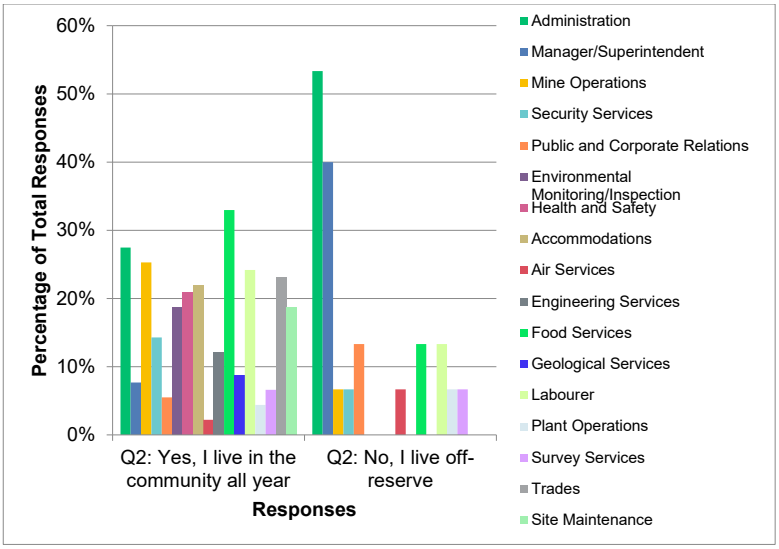
When asked if members that are currently not employed in the mining industry wanted to work directly and indirectly in mining in the future, out of the 159 responses received from members living on-reserve: 46 respondents (29.5%) indicated that they would like to work in mining in the future; 33.3% of respondents indicated that they have no intentions to work in mining, and the remaining 58 respondents (37.2%) indicated that they were are unsure, as shown on Figure 4-6. Individuals that were interested in working in the mining industry shared different roles they wanted to fill, as shown on Figure 4-7. Food services was the most mentioned response from members of the community (30 out of 91 responses), followed by administration (25 out of 91 responses), and security service (13 out of 91 responses) (SNC-Lavalin, 2022).

Figure 4-6: If You Are Not Employed in Mining, Would You Like to Be in the Future? – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022.

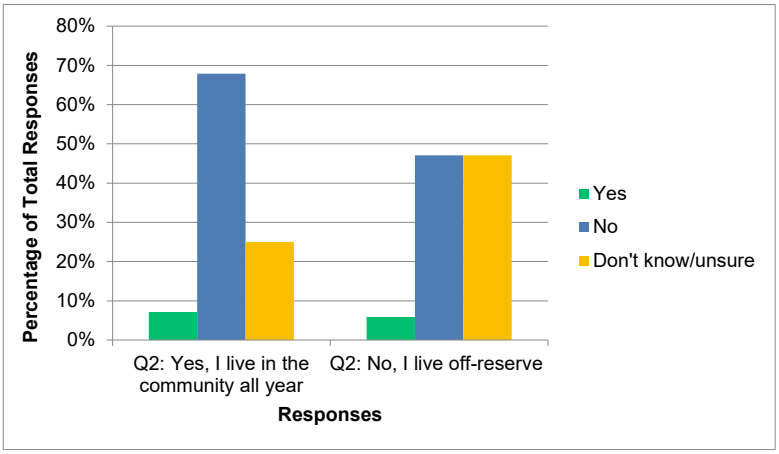
Figure 4-7: If You Would Like to be Employed in Mining, What Sort of Work Would You Like to do for these Mining Exploration Company/Companies – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022.

A major concern with labour force and employment in Webequie First Nation is the lack of local job opportunities, as 76 out of 112 responses from members living on-reserve stated that they do not feel there are enough job opportunities for them, as shown in Figure 4-8 (SNC-Lavalin, 2022).

Figure 4-8: Do You Think There Are Enough Local Job Opportunities? – WSR Socio-Economic Survey

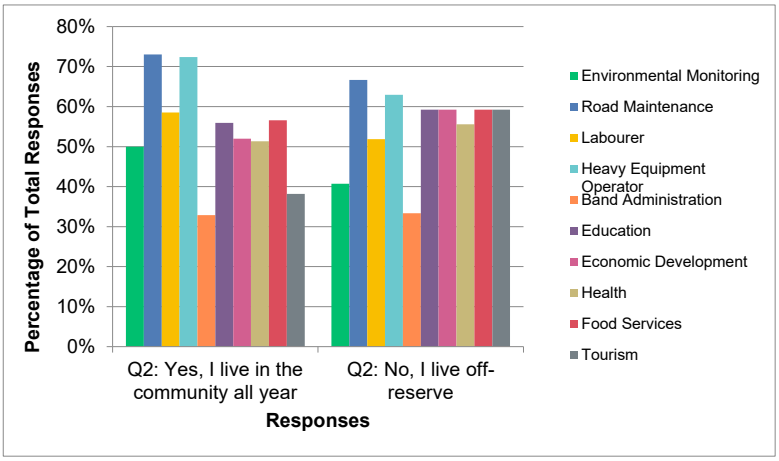


Source: SNC-Lavalin, 2022.

Members were asked that if they think the WSR will provide job opportunities for Webequie First Nation, and what job opportunities they would seek. Members were allowed to select as many of the options that were provided, which included: environmental monitoring, road maintenance, labourer, heavy equipment operator, band administration,

education, economic development, Health Services, food services, and tourism. 152 responses were collected from members living on-reserve. Road maintenance and heavy equipment operator were most selected in the responses, with 73.0% and 72.4% of responses, respectively, as shown in Figure 4-9. Band administration was the least selected responses among members living on-reserve, as only 58.6% of responses included band administration as a job members would seek (SNC-Lavalin, 2022).

Figure 4-9: If you think the Webequie Supply Road will provide job opportunities for Webequie First Nation, which of the following sectors would you like to seek job opportunities in? – WSR Socio-Economic Survey

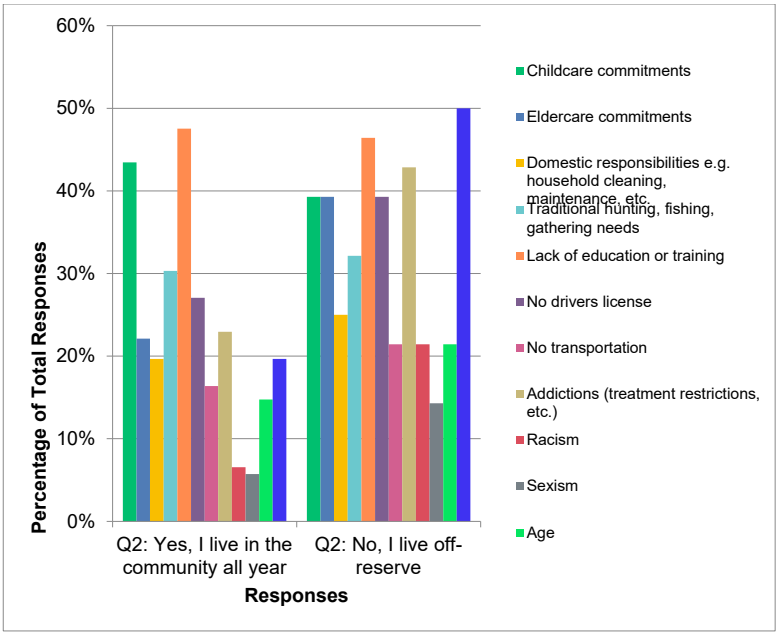


Source: SNC-Lavalin, 2022.

Webequie First Nation members who live off-reserve were asked whether they would live in Webequie year-round and if so, is it because of the WSR and/or future mining developments in the area. Out of 30 responses, 17 of the responses indicated that they would like to live in Webequie First Nation year-round, four of the responses indicated they would not like to live in Webequie First Nation year-round, and the remaining 14 responses indicated that they are unsure. Among the individuals who responded that they would like to live in Webequie First Nation year-round, 12 out of 15 responded that the WSR and/or future mining developments in the area is the reason, while one individual indicated that this was not the reason, and two individuals indicated that they are unsure.

Many First Nations members experience some barriers in obtaining or maintaining employment. When asked what Webequie First Nation members feel to be barriers, 47.5% of responses from members living on-reserve listed a lack of education and training, and 43.4% of responses listed childcare commitments as a barrier, as shown Figure 4-10 (SNC-Lavalin, 2022).

Figure 4-10: If you experience barriers to getting or maintaining employment, please identify what they are – WSR Socio-Economic Survey



Source: SNC-Lavalin, 2022.

There is a strong desire within the community to find employment, and having training programs readily available will prepare them for the future (SNC-Lavalin, 2022a). All training programs provided by the community are open to everyone. If students do not have the prerequisite experience/education for the program, it will be provided by the school. However, some programs require students to complete Grade 12 education (e.g., heavy equipment operator, construction, carpentry, plumbing), but the main high-school on-reserve only offers courses up to Grade 10 because there are not enough students. As a consequence, secondary school students find themselves compelled to travel to Thunder Bay and Sault Ste. Marie to complete their Grade 11 and 12 education (211 Ontario, 2023b). The Webequie Employment Coordinator believes that the lack of interest among students to enroll in higher level education is because promises made by the government to have more job opportunities were not kept and it is uncertain whether jobs that require Grade 12 level education will be available for students upon graduation therefore less students plan to continue their education to Grade 12 (SNC-Lavalin, 2022a). However, some training programs allow students to enroll without completing high-school, such as drilling and line cutting training programs. Community members that have partial experience/training in certain trades, such as plumbing and carpentry, are eligible to receive apprenticeship training. There is a strong need in the community for heavy equipment training and maintenance training as many of the current community members that are trained in these fields are older and will likely retire soon, therefore, having these training programs will be essential for the younger generation to take over the trades. Both men and women in the community are interested in taking training programs but women can have difficulty enrolling due to problems such as education barriers and household roles including childcare. Although most women in the community do not want to work in construction, there is interest in construction related roles such as accommodation, hospitality, and maintenance in the camp.

Due to changing demands for specific jobs, it is not feasible for the community to provide training for skills that are not applicable to the current job market (SNC-Lavalin, 2022a). Rather, the community will identify and offer the training courses that are needed to match with current and near future job opportunities. Many members of the community want to become semi-truck drivers, but this requires members complete a G1 driver's written and G2 road test, which is difficult as there are no proper highways for members to practice their driving. With technology being incorporated into existing jobs, the need for computer training becomes apparent. The youth participants of the WSR Socio-Economic focus groups, for instance, expressed their frustration over the limited internet speeds and access points in the community and emphasized the need for more hotspots (SNC-Lavalin, 2023).

When asked if WSR will bring more job opportunities, the Webequie Employment Coordinator believes that it will, and a large focus will be on providing community members with the education and training required for these new jobs (SNC-Lavalin, 2022a). The increased job opportunities will most likely benefit those younger than 30 years old the most (SNC-Lavalin, 2022a). However, the view from one community spokesperson is that this would most likely be a lot of coordinating jobs (i.e., desk/office work) and road maintenance work (SNC-Lavalin, 2022a).

Many community members take part in training and certification courses offered by KKETS (Webequie First Nation, 2021). KKETS has previously offered training in drilling, line cutting and heavy equipment mechanic training, but this training is typically only offered outside of Webequie. An interview with a Webequie community member outlined that the focus of KKETS is now on the Aboriginal Skills and Training Program which helps members complete Grade 12. Once the members have completed Grade 12, they can train for a skilled trade (SNC-Lavalin, 2022a). The Employment Coordinator position at Webequie is currently vacant (Kiikenomaga Kikenjigewen Employment & Training Services, 2023). The trades training programs funded by KKETS are only available off-reserve in places such as Thunder Bay or Ottawa. (SNC-Lavalin, 2022a). Webequie attempted to have the training offered on-reserve by bringing trainers to the community, but previous COVID-19 health restrictions made it difficult to execute. With less restrictions and a new training building, there is currently more focus on having training programs delivered on-reserve.

The Northern Ontario Internship Program (NOIP) is a training program offered by the Northern Ontario Heritage Fund Corporation (NOHFC) that is provided to graduates interested in pursuing careers in existing or emerging priority sectors (e.g., advanced manufacturing, agriculture, aquaculture, and food processing, etc.)in Northern Ontario (Northern Ontario Heritage Fund Corporation, 2017). The purpose of the NOIP is to strengthen Northern Ontario's competitive advantage and build economic development capacity by attracting and retaining graduates in the North. Any organization is eligible to apply for the program to support recent graduates, provided that they are 1) located in Northern Ontario, and 2) have been in operation for at least one full year with a minimum of one full-time employee and operate in existing or emerging priority economic sectors.

4.1.2 Education and Training Attainment

There is high value placed on principles and teachings passed down by Elders and Knowledge Keepers. These teachings take place in-community and out on the Land. The Knowledge passed on from the ancestors sustain Webequie Oji-Cree identity and way of life. The community follows the teachings from the Elders, as well as the Seven Grandfather teachings along with the Three-Tier model (Webequie First Nation, 2019).

Table 4-5 present the highest level of western educational attainment for the population aged 15 years and over in private household in Webequie for 2021.

- The majority of the population has no post-secondary certificate, diploma, or degree at 67.1%; within this group females are more likely not to have a degree in comparison to males; and
- 60 Webequie residents have obtained a post-secondary certificate, diploma, or degree which accounts for 12.8% of the population aged 15 years and over. The distribution of this group between male and female is skewed with males more than doubling the number of degrees in comparison to females.

Table 4-5: Highest Certificate, Diploma or Degree for the Population Aged 15 Years and Over in Private Households in Webequie First Nation (2021)

Highest Level of Education	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
No certificate, diploma or degree	290	61.7%	130	59.1%	160	62.7%
High (secondary) school diploma or equivalency certificate	120	25.5%	45	20.5%	75	29.4%

Table 4-6 presents the major fields of study for Webequie First Nation's population aged 15 and over who have obtained a post-secondary education as of 2021.

- The major fields of study pursued by Webequie residents include education, humanities, architecture, engineering, and related trades, and personal, protective, and transportation services; and
- The fields most commonly studied were architecture, engineering, and related trades which includes but is not limited to construction trades, precision production, mechanic and repair technology, engineering, and historic preservation and conservation.

4.1.3 Labour Income

Table 4-7 present the total individual income by group for the population aged 15 and over for 2020 in Webequie by self-identified gender.

- For males, the most common income group is “under $10,000 (including loss)” with 27.8% of working males falling into this category;
- For females, the most common income groups are “under $10,000 (including loss)” and “$10,000 to $19,999” with 40% of working females falling within these categories;
- In 2020, there were more females than males with individual incomes;
- The highest income bracket for males is between $70,000 to $79,999 with 2.7% of working males falling into this category; and
- The highest income bracket for females was between $100,000 to $149,999 with 2% of working females falling into this category.

Table 4-7: Total Individual Income by Group for the Population Aged 15 Years and Over in Private Households in Webequie (2020)

Income Group	Total		Male		Female

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 4-8 presents the total household income for private households in 2020 in Webequie.

- The majority of households have an income level between $50,000 to $59,999, $60,000 to $69,999, or $70,000 to $79,999. Each group accounts for 11.1% of private households;
- There are four income brackets which no households fall under: $5,000 to $9,999, $10,000 to $14,999, $45,000 to $49,999, and $200,000 and over; and
- Approximately 50% of households earn under $70,000 (52.8%) while the remainder earn over $70,000 (47.2%).

Table 4-8: Total Household Income Groups for Private Households in Webequie (2020)

Income Group	Count	Distribution

4.2 Overall Economy

Fly-in communities such as Eabametoong First Nation generally experience higher cost of living due in part due to connectivity with wider markets. There are projects and initiatives in the community that support economic development, although historically one factor that has challenged economic development is the road connectivity.

Existing conditions of the overall economy in Webequie First Nation are described in this section using the following indicators:

- Cost of living;
- Economic development, including economic development initiatives, capacity, gaps, major projects, new projects, closures, equipment availability, energy profile, access to capital and trends; and
- Traditional economy.

Data on Gross Domestic Product for the Webequie First Nation is unavailable from Statistics Canada.

Due to the relative remoteness of Webequie First Nation and supply chain challenges (i.e., transporting goods into the community), the cost of living can be substantially higher in comparison to urban areas. In general, the community is far from urban centres, which creates transportation challenges for both goods and services coming into the community as well as residents leaving the community for goods and services.

Practicing traditional culture is an important element of life in Indigenous communities, with members being very connected to the lands on which they live.

The traditional economy is another important cultural aspect within the community. Unfortunately, traditional economy activities are not widely reported on and therefore it is difficult to quantify the economic impact they have within the community.

A significant portion of the economic development activities occurring are focused on business development, access to services, advisory services, and employment counselling.

Table 4-9 presents the number of people considered to be low-income living in Webequie First Nation in 2021. Individuals are considered low-income based on the low-income measures (LIM). The LIM is a relative measure of low-income and considers individuals to be low-income if their income is less than 50% of the median income level.

- The largest age group living in low-income according to the low-income measure are people aged 0 to 17 years;
- Approximately 40% of people aged 0 to 17 years are considered low-income;
- Approximately 25% of people aged 18 to 64 years are considered low-income;
- Approximately 40% of people aged 65 years and over are considered low-income; and
- Approximately 31.2% of the Webequie population is considered low-income.

Table 4-9: Population in Low-Income Based on the LIM After Tax for Webequie First Nation (2021)

Age Group	Count	Distribution
0 to 17 years	105	46.7%
18 to 64 years	100	44.4%
65 years and over	20	8.9%
Total	**225**	**100%**

Source: Statistics Canada, 2022a.

As a result of Webequie being a fly-in community, the cost of living is high. Key stakeholder interviews were conducted during 2022 and 2023. In key stakeholder interviews, it was reported that during the majority of the year since Webequie is a “fly-in community, the only way to get products, services, and people in is through flights. That has caused a high cost of living in Webequie”.

One interview respondent from the community described the cost of living in the community, as follows:

> *The cost of living is one of the major concerns because of where we are situated. Cost of living, we always bring it on the table with the government. Even to go out on the land, you have to spend money. And some of these people that go out depend on others. Like, I support my son and daughter if they want to go out into the Bush. It costs money. It cost several hundred dollars to a thousand dollars to send out kids for experience during the cultural break that they have now. That’s why we have programs like Choose Life for kids to go out and gain experience. And some people don’t have the opportunity to send their kids. Even if a person wants to go out and fish on a boat people need money. We are on an island. If you want to go out fishing every once in a while, or go swimming with the kids they need to buy more things. (Webequie First Nation Key Informant Interview, 2022).*

In surveys conducted in 2022, data were gathered on a variety of subjects including cost of living (SNC-Lavalin, 2022). Table 4-10 to Table 4-13 present survey data on the cost of living (i.e., rent/mortgage, energy, and groceries) for residents of Webequie First Nation in 2022.

Table 4-10: Household Income is Spent on Rent or Mortgage Payments per Month

Income Spent	Count	Distribution

4.3 Business Environment

4.3.1 Local Economy

Table 4-14 presents a breakdown of all industries using the 2-digit North American Industry Classification System (NAICS) codes and their presence within the geographical boarders of Webequie First Nation in 2018 and 2022.

The industries with the highest growth between 2018 and 2022 include public administration (68%), educational services (35%), and health care and social assistance (35%).

Table 4-14: All Industry Presence in Webequie First Nation (2018 – 2022)

Table 4-15 presents the industry supply chain that represents the purchases an industry makes from all other industries in Webequie in 2020. This table displays the value and percentage of in-region purchases and imported purchases for 2020 that are summarized as follows.

- The percentage of in-region purchases across all industries is very low, of the 20 identified industries only 6 made in-region purchases which amounted to under $200,000. This accounts for 1.4% of total purchases in 2020;
- The industry with the highest percentage of in-region purchases is health care and social assistance at 5.7%; and
- Total supply chain purchases amounted to approximately $14.2 million in 2020.

Table 4-15: Industry Supply Chain in Webequie First Nation (2020)

Industry	In-region Purchases	% In-region Purchases	Imported Purchases	% Imported Purchases	Total Purchases
Manufacturing	$-	0.0%	$2,897,704	100.0%	$2,897,704

Table 4-16 presents the regional requirements or needs, the value of the goods and services demanded of Webequie by industry. The table presents the level of demand for each industry met in-region and the demand met by imports that are summarized as follows.

- The majority of demand for goods and services is met by imports (97%);
- The industry meeting the most demand in-region is educational services with 15.7% of demand met in-region; and
- 13 industries do not meet any demand in-region and rely solely on imports.

Table 4-16: Regional Requirements/Needs to Meet Demand by Industry in Webequie (2020)

4.3.2 Mining, Aggregate and Forestry Activities

The Webequie First Nation Community Based Land Use Plan identifies an Area of Interest for Planning (AIP). Aggregate data within Webequie First Nation is limited and the potential for resource use is not well known. There is a higher economic potential for metals in older rocks, which makes up a majority of the AIP, but younger rocks have lower economic potential for metals. The Webequie First Nation Community Based Land Use Plan (CBLUP) also seeks to determine the potential for various forestry activities and identify desired opportunities and provide complementary zoning as there is limited industry data for mining and forestry exists for Webequie First Nation.

In 2014, Webequie First Nation and the Ministry of Natural Resources and Forestry (MNRF) signed the Webequie First Nation CBLUP. The Plan identified an AIP. The Webequie AIP is 856,000 ha in size, situated approximately 650 km north of Thunder Bay Ontario. Indigenous communities located adjacent to this AIP are Attawapiskat, Weenusk, Kasabonika Lake, Nibinamik, Neskantaga, Eabametoong, and Marten Falls.

Mining and Aggregate

The majority of the Webequie AIP is underlain by old rocks of the Canadian Shield. In the eastern and northern parts of the area, the old rocks are overlain by flat-lying younger sedimentary rocks. Both the old and young rocks are covered by glacial and recent sediments (Webequie First Nation, 2019).

Aggregate data within Webequie First Nation is limited and little-known potential for resource use is currently available. There is a potential that old volcanic and gabbroic intrusive rocks may host chromite, base metals, platinum and palladium, or gold and silver deposits (Webequie First Nation, 2019).

The areas in Webequie First Nation underlain by old granitic intrusive rocks and old sedimentary rocks have lower economic potential. The younger sedimentary rocks of the eastern portion of Webequie First Nation have lower economic potential for metals than the older volcanic and gabbroic rocks. They may, however, host industrial mineral deposits or be suitable for use as aggregate.

Forestry

Part of the Webequie First Nation CBLUP will seek advice to determine the potential for various forestry activities (i.e., defining quality and quantity of resources). Forestry opportunities to be considered may include non-timber forest products (cross-reference with traditional use), firewood, biofuel, local-scale sawmill, value-added production (Webequie First Nation, 2019).

The plan will identify desired opportunities and provide complementary zoning.

Limited industry data for mining and forestry exists for Webequie First Nation in common data sources such as the Canada Census of Population and Lightcast.

4.4 Public and Indigenous Community Finances

Existing conditions of public and Indigenous community finances are described in this section using the following indicators:

- Tax base;
- Indigenous community funding/grants;
- Revenues (taxes, transfers, grants, etc.); and
- Public expenditures.

Tax base is not applicable to First Nation communities.

The *First Nations Financial Transparency Act* requires each First Nation to which the Act applies to publish on its Internet site, or cause to be published on an Internet site, the following documents within 120 days after the end of each financial year (Government of Canada, 2021):

- Its audited consolidated financial statements;
- The Schedule of Remuneration and Expenses;
- The auditor's written report respecting the consolidated financial statements; and
- The auditor's report or the review engagement report, as the case may be, respecting the Schedule of Remuneration and Expenses.

The Consolidated Statement of Operations for Webequie First Nation for the year ended March 31, 2020 (MNP, 2023a) was provided to the team, but in the interests of confidentiality is not presented in this report.

TRADITIONAL INDIGENOUS LAND AND RESOURCE USE

AtkinsRéalis - Confidential

5. Traditional Indigenous Land and Resource Use

5.1 Sites and Areas Used for Traditional Activities

Indigenous communities customarily use the lands and the resources of their traditional territories for various purposes related to achieving Mino Bimaadziwin (The Good Life). Mino Bimaadziwin is a cultural value that includes spiritual, physical, mental and emotional well-being which may be tied to a reciprocal relationship with Aki (the Land).

The Anishinaabe way of life includes fishing, trapping, hunting, harvesting and stewardship of Aki while keeping in mind the respectful value of sustainability. The types of practices are well known generally; however, specific sites and areas of use require in-depth information from communities participating in the information gathering.

According to the Webequie First Nation CBLUP, the Webequie First Nation Traditional Customary Practice and Use Area extends 40 km to 50 km in radius around the Webequie community providing for traditional and recreational activities (Webequie First Nation, 2019). Examples of traditional use activities include trapping, fishing, ceremonial activities, gathering/harvesting and hunting a wide variety of wildlife species, including moose, caribou and waterfowl. These species contribute greatly to the diet of the community members and are a significant cultural activity that ties the Webequie people to the land (Webequie First Nation, 2019). According to Webequie philosophies each species of fish has a particular cultural use and is part of the web livelihood tradition that stems back many generations. The Webequie people use fish for a variety of purposes. For example, burbot fish holds cultural significance as it is used to make rattles for spiritual practices recreation and children's toys and the skin of the northern pike/jackfish is used make bags or containers to store fat or oil for candles (Webequie First Nation, 2019).

Eastwood Island is an important gathering area around Winisk Lake from which harvesting (fishing, hunting, and trapping) and other traditional and spiritual activities are carried out (Webequie First Nation, 2019). Fur-bearing animals are not only used for food but also for tools and clothing (e.g., moccasins, mitts, and fur hats) (Webequie First Nation, 2019). Trees are used for snowshoes, sleighs, buildings, and medicine (Webequie First Nation, 2019).

The CBLUP provides goals and descriptions of land use areas within the proposed Webequie planning area as well as permitted uses/activities. Traditional uses within prescribed zoning areas are outlined below:

- Zone #1 – Western Upland Enhanced Management Area (EMA) has a land mass of approximately 248,354 ha. This area is directly west and northwest of the community and is said to be an area of intensive traditional use. This area was and is still used for a variety of customary harvesting, fishing, hunting, and gathering activities. This area is of high value to the Webequie First Nation as it contains gathering areas, historic village sites, occupation sites and burial sites (Webequie First Nation, 2019). Use of the southern part of this area is shared with Nibinamik First Nation and use of the northern and central area is shared with Kasabonika Lake First Nation. There are traditional travel routes to both communities. The major lakes in this area include Wapikopa, Chipai and Kanachuan as well as Shibogama Lake natural heritage area (Webequie First Nation, 2019).
- Zone #2A – Winisk Watershed General Community Livelihood Use Dedicated Protected Area, is a landmass of approximately 977,147 ha around the Webequie reserve and is part of the Winisk River Provincial Park. This area is actively used for harvesting activities and contains several traditional travel routes that connect to traditional harvest areas and neighbouring communities (Webequie First Nation, 2019). This area has many fish and fish spawning sites, wildlife and plants for food and medicine. There is a common interest between the Kasabonika Lake First Nation, Neskantaga First Nation, Nibinamik First Nation, and Weenusk First Nation communities and ongoing shared use and interest in this area (Webequie First Nation, 2019).

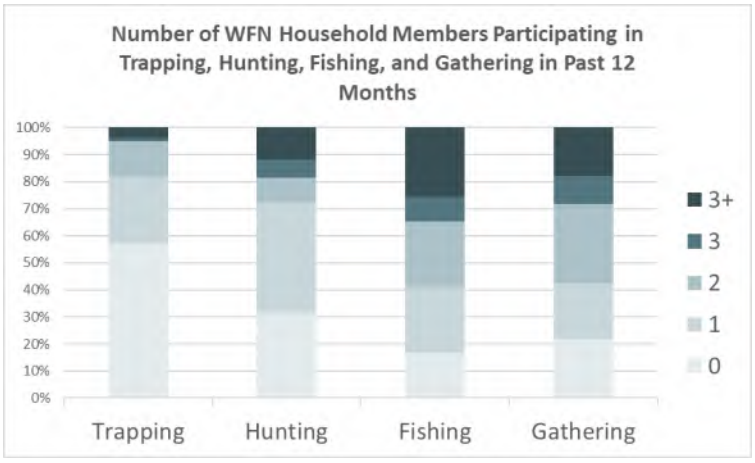
- Zone #2B – Kaa-shi-ti-kwayak (Waterway) Dedicated Protected Areas has a land mass of approximately 76,475 ha. It comprises several waterways, primarily in the Winisk River watershed. This area is of central importance to the Webequie people as it is used for hunting, fishing and gathering/harvesting. This area is also said to contain cultural monuments along ancestral travel routes that connect the community to their traditional area and neighbouring communities. Zone #2B supports fish habitat, spawning sites, waterfowl habitat and medicinal plants and herbs (Webequie First Nation, 2019). This area includes a number of community member trap cabins and community use cabins that support traditional harvesting activities (Webequie First Nation, 2019).
- Zone #3 – Shared Area with Marten Falls First Nation and Neskantaga First Nation has a land mass of approximately 481,290 ha. Webequie First Nation has chosen not to advance specific planning direction for the area at this stage pending further discussion between the three communities that use the area. The three Nations have claim to common interest in the Ring of Fire mineral deposits (Webequie First Nation, 2019).
- Zone #4 – General Use Area is within the James Bay Lowlands east and northeast of Webequie First Nation and includes the Upper Ekwan and Lower Attawapiskat watershed. Indigenous traditional harvesting activities that are significant in the area include waterfowl, fish, caribou, and moose harvesting. This area also provides medicinal plants which are used by First Nation members for a variety of purposes (Webequie First Nation, 2019).
- Zone #5 – Waanaabiikaan (Bowl Rock) EMA has a land mass of approximately 250,660 ha. It is made up of areas north of the Winisk River Provincial Park and the community of Webequie. This zone is significant for fisheries, and it contains lakes, rivers and streams that are important for fish habitat and fish spawning sites. Hunting, fishing, and harvesting are also conducted by the community in the area (Webequie First Nation, 2019).
- Zone #6 – Corridor EMA has a land mass of approximately 129,102 ha. It is a shared area with Neskantaga First Nation and Nibinamik First Nation. This area is important to Webequie First Nation as it contains high quality moose habitat and calving sites as well as fish habitat and fish spawning areas. The area also has a high density of wolves. (Webequie First Nation, 2019).
- Zone #7 – Prime Lake EMA has a land mass of approximately 33,743 ha. It is used by Webequie First Nation members throughout the year for harvesting of food and medicinal plants, caribou, moose, fish and geese (Webequie First Nation, 2019).

Webequie First Nation members sustainably utilize all areas of the land, and the different Zones are important to the Webequie First Nation for traditional use.

The Webequie First Nation Community Well-Being Baseline Study was completed in 2014 (Webequie First Nation, 2014). It provides baseline data and summarizes the research and community engagement conducted over a five-month period. This included 96 household surveys which represented 66% of the 145 on-reserve private dwellings in Webequie First Nation in 2014. Within the Webequie First Nation Well-Being study, members expressed a strong connection to their traditional land and the important relationship between people and the environment.

Figure 5-1 identifies participation rates in trapping, hunting, fishing, and gathering. Trapping rates are the lowest, with only 40% of households actively trapping. Fishing is very common, with over 80% of Webequie First Nation households participating; and over 30% with 3 or more members fishing (Webequie First Nation, 2014).

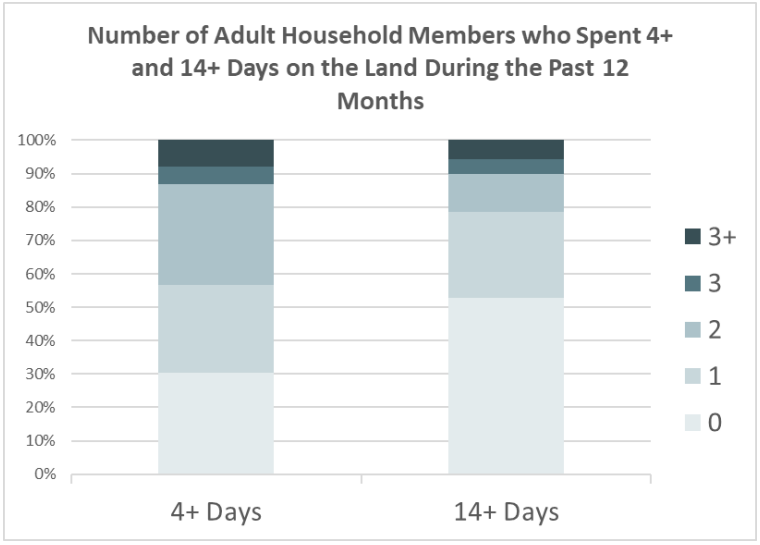
Figure 5-1: Webequie First Nation – Number of Household Members Participating in Trapping, Hunting, Fishing and Gathering in Past 12 months



Source: Webequie First Nation, 2014.

Webequie First Nation participants were asked how many household members spent four or more consecutive days on their traditional lands during the past year, as shown on Figure 5-2. 70% of Webequie First Nation households reported that at least one adult member had spent 4+ days on the land in the last year. Additionally, members were asked if these trips of four or more consecutive days totalled 14 or more days. While this number was significantly less, close to 48% of Webequie First Nation households reported at least one adult member participating in these extended trips.

Figure 5-2: Webequie First Nation – Number of Adult Household Members Who Spent 4+ and 14+ Days on the Land During the Past 12 Months



Source: Webequie First Nation, 2014.

In an interview with the former Chief and a Councillor about the Project, it was expressed that they believe that Webequie First Nation has the right to their traditional territory and to make a living form the resources of their territory. Economic activity on First Nation traditional territories could benefit more people if done correctly. Some Indigenous laws conflict with Euro-Canadian ways of thinking, which when doing reserve creation often leads to difficulty in negotiating and often requires Elder advice to resolve the issues. Elders explained that one of the reasons why many First Nations people live in poverty despite Canada being a rich country is because the Crown and the religious institutions made an agreement that went after the First Nations' rights to their land and resources (SNC-Lavalin, 2022). The spirit and intent of the agreement is still present which is why the First Nations are in poverty. South of Treaty No. 9, some Anishinabek Homelands overlap and are informally shared territories. This was common pre-Treaty and/or before the imposition of the *Indian Act*. The Webequie First Nation CBLUP identifies shared areas with the other First Nations within the identified Local Study Area (LSA) that are used for traditional purposes.

5.2 Culturally and Spiritually Important Sites and Areas

There are culturally and spiritually important sites (e.g., travel routes, burial sites, gathering sites) within the traditional territories of the Indigenous communities. Cultural activities and practices may occur within a specific location or be independent of a specific location. Cultural practices like traditional crafting, gatherings, teachings, ceremonies and traditional food harvesting do not always occur at a specific location, although some cultural activities and events such as community feasts and pow-wows, may be associated with specific sites. The social and cultural value of these events is significant to Indigenous communities.

Water as Life is a recurrent theme for many Indigenous communities. Water as a sacred element has deep spiritual and cultural significance. Water connects all Life, whether it's through consumption, honoured in ceremony or used as transportation. These activities are integral to communities as they relate directly to identity, cultural reclamation and the transference of knowledge.

Note: More information about water and protocols will be forthcoming with the addition of Indigenous Knowledge studies.

Note: Indigenous Knowledge and Land and Resource Use studies are ongoing and information will be included subject to community wishes

Webequie First Nation has culturally significant and sensitive sites throughout their traditional land. Section 3.3 of the Webequie First Nation CBLUP notes that water is seen as the most precious element of their livelihood. Areas where rivers or waterbodies are present are seen as highly spiritually important areas to which the Webequie community believes they have been endowed with the responsibility to protect. These areas include the Winisk Lake and surrounding tertiary watersheds and a series of maze-like channels connected to the Hudson Bay Coast, located to the south-east of the project footprint (Webequie First Nation, 2019). The location of the present-day community on the north end of Eastwood Island was originally a summer gathering site for family groups that occupied and utilized a broad surrounding area throughout the year. Elders speak of scattered graves around the north point of the community dating back to the 1800s (Webequie First Nation, 2019). Eastwood Island is another important gathering area around Winisk Lake from which harvesting (fishing, hunting, trapping and gathering), and other traditional and spiritual activities have been and continue to be carried out (Webequie First Nation, 2019).

The Webequie First Nation CBLUP outlines general information about cultural and historic areas within specific zones:

- Zone #1 is known to have significant cultural and historic value to both the Webequie and Nibinamik people.
- Zone #2A is said to be central to the community's livelihood and has several traditional and cultural sites including, burial grounds, birth places, harvesting, and historical gathering areas. This area is a common interest between the Kasabonika Lake, Neskantaga, Nibinamik, and Weensuk communities.

- Zone #2B is significant to the community as it is said to contain cultural monuments left standing along ancestral travel routes that connect the community to their traditional area and neighbouring communities.
- Zone #4 contains traditional travel routes, campsites and historic camping areas and culturally sensitive sites.
- Zone #5 contains culturally sensitive sites, named places and encompasses a historic waterway travel route to Kasabonika Lake.
- Zone #6 contains numerous culturally significant waterways, lakes, rivers and streams which are defining features of the area and connect with adjacent Kaa-shi-ti-kwayak Dedicated Protected Areas. Waterways such as Wahpiidotem (Wapitotem) River are monuments to the Webequie people due to longstanding traditional and historical use. The Corridor EMA is a shared area with Neskantaga and Nibinamik and contains historic travel routes from Webequie to the two communities. Culturally significant and sensitive sites are located close to water as well as across the Corridor EMA.

The 2019 Webequie On-Reserve Land Use Plan provides information and guidance for community land use and development projects (Webequie First Nation On-Reserve Land Use Plan, 2019). Section 4.2 identifies a number of “Known Cultural Sensitive Areas” within the boundary of the Webequie First Nation Reserve. The On-Reserve Plan identifies important cultural areas as:

1. Sites identified as important traditional use, historic, or cultural significant areas through pre-planning input from members, families, and Elders;
2. Registered and/or known archaeological sites;
3. Sites identified during pre-development site investigations; and
4. Sites discovered during site construction.

Feasts, gatherings and pow-wows are held within the Webequie community and there are three sweat-lodges in the Webequie community (Webequie First Nation, 2023).

In an interview with the former Chief and a Councillor, they indicated that the Webequie First Nation has a Creator’s Earth Law which refers to respecting and developing a harmonious connection with everything (SNC-Lavalin, 2022). The Creator’s Earth Law contains three principles: first is the relationship with your creator, second is the relationship with the land and animals, and third is the relationship to the people around you. The Elders describe the Ring of Fire as “the lungs of the earth” similar to the Amazon, meaning that it holds an important spiritual value and disturbing this area without stewardship input and knowledge will cause it to become unstable (SNC-Lavalin, 2022).

NON-TRADITIONAL LAND AND RESOURCE USE

AtkinsRéalis - Confidential

6. Non-Traditional Land and Resource Use

This section summarizes a baseline of Non-Traditional Land and Resource Use. This includes land use plans and policies, community based land use planning, industrial and commercial land use, outdoor recreation and tourism, and provincial parks and protected areas. Non-Traditional land use also includes the designating of lands through federal, provincial or municipal authorities for a specific use. Baseline information was developed through a desktop review of existing information, federal and provincial mapping databases, federal and provincial policy and regulation review and secondary data. Secondary data included a review of recreation and tourism websites, municipalities websites and news articles.

6.1 Indigenous Homelands

It is acknowledged that the project study areas are situated within the traditional lands of the Anishiniimowin/ Anishinabe/Mushkeego Peoples. “The Anishiniimowin/Anishinabe/Mushkeego Peoples have called the lands of the James Bay Treaty home since time immemorial. The Mushkeego live mainly in the James Bay and Hudson Bay lowlands, while the Anishiniimowin and Anishinabe traditionally live mainly in the interior, closer to the height of land that divides the James Bay and Hudson Bay watershed with those to the south.” (Ministry of Public and Business Service Delivery, 2022). The Anishiniimowin/Anishinabe/Mushkeego Peoples are stewards of the land and hold the inherent right of self-determination that is recognized and affirmed under Section 35 of the *Constitution Act*, 1982. Canada has recently developed an Action Plan to implement the United Nations Declaration on the Rights of Indigenous Peoples (The United Nations, 2007). The five-year Action Plan (2023-2028) outlines and affirms as well as respects the inherent rights of Indigenous Peoples as they relate to lands, territories and resources.

6.2 Treaty Lands

Treaties, are agreements made between the Government of Canada, Indigenous Nations and often provinces and territories that define ongoing rights and obligations on all sides. These agreements set out continuing Treaty Rights and benefits for each Indigenous Nation (CIRNAC, 2023).

Treaties with Indigenous Nations in Ontario include both:

- Historic (numbered) treaties with Indigenous Nations;
- Modern treaties, also called comprehensive land claim agreements with Indigenous Nations; and
- Specific claim agreements to address past grievances.

The Project is within land covered by Treaty No. 9 (CIRNAC, 2013). The Treaty No. 9 area covers approximately two-thirds of Ontario’s total landmass and includes:

> *“that portion or tract of land lying and being in the province of Ontario bounded on the south by the height of land and the northern boundary of the territory ceded by the Robinson Superior Treaty of 1850, and the Robinson Huron Treaty of 1850, and bounded on the east and north by the boundaries of the said province of Ontario as defined by law and on the west by a part of the eastern boundary of the territory ceded by the Northwest Angle Treaty No. 3.” (Crown-Indigenous Relations and Northern Affairs, 2013)*

Treaty No. 9 was signed between the Anishiniimowin/Anishinabe/Mushkeego Peoples and the Crown in 1905-1906, with adhesions in 1929-1930. The Treaty contains a number of provisions including cash payments, the creation of reserves, education funds for schools and teachers, etc. With the signing of the Treaty, the Crown sought to extinguish First Nations title to the land. Treaty No. 9 also outlines traditional pursuits such as hunting, fishing and trapping that could continue, subject to federal regulations and “exceptions for settlement, mining, lumbering, trading or other purposes.” (Ministry of Public and Business Service Delivery, 2023).

6.3 Reserves

The *Indian Act*, R.S.C., 1985, c.I-5, states that land on reserves is owned by the Crown (Government of Canada) but it is given to the First Nation or the Band to hold and use as a tenant. This legal structure (to be a tenant on land owned by the Crown) is shared between community members collectively which provides a beneficial interest in the land. Under the *Indian Act*, a reserve means a tract of land which the legal title is vested with His Majesty (Government of Canada) that has been set apart by His Majesty for the use or benefit of the Band. Section 81(1) sets out the by-laws which govern the authority of the Band Council and includes by-laws related to land use, zoning, the environment, and other works. These by-laws only apply on-reserve. On many reserves, if land is legally given to a Band member, a certificate of possession or certificate of occupation is granted. The certificate grants the individual(s) rights of possession or occupation of the property for housing, business, or resource extraction. Under the *Indian Act*, this requires the approval of the Minister of Indigenous Services.

6.4 Crown Land

The Project is proposed to be located primarily on provincial Crown land and will require access to, and the development, use and occupation of lands and resources which are currently used for traditional activities by Indigenous communities. Crown land is used to describe land owned by federal or provincial governments under the *Public Lands Act*.

Traditional activities of Indigenous communities include hunting, fishing, trapping, and gathering, as well as cultural and spiritual activities, which may occur on Crown land.

Given the location of the Project, land designated under the *Far North Act*, *2010* may be subject to have CBLUPs initiated by Indigenous communities. Table 6-1 shows the length of WSR within the Webequie Reserve and Crown land under each route alternative.

Table 6-1: Length of WSR within the Webequie Reserve and Crown Land under Each Route Alternative

Alternative	Length in Webequie Reserve (km)	Length Within Crown Land (km)	Total Road Length (km)
1	16.5	90.2	106.7
2	16.4	88.8	105.2
3	16.3	89.9	106.3

6.5 Road/Transportation Studies

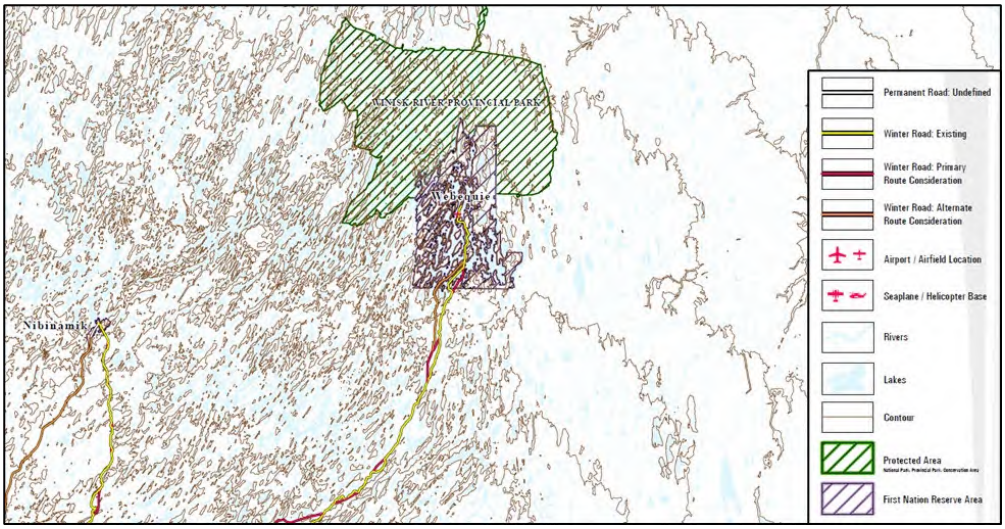
Webequie First Nation is a remote fly-in community that has access to materials and goods via the Webequie Airport and the use of seasonal winter roads that connect to the provincial highway system.

6.5.1 Winter Road Re-Alignment Study (2008)

On behalf of five First Nations (Marten Falls, Eabametoong, Neskantaga, Nibinamik and Webequie), the Matawa First Nations Tribal Council conducted a study in 2008 to examine the re-alignment of selected sections of winter roads (Neegan Burnside, 2008) as shown in Figure 6-1. The study included extensive consultation with the First Nations, regulatory agencies and stakeholders (e.g., forestry companies and outfitters). It identified several alternative re-alignments and design alterations (e.g., improvement to road design and construction standards) to address deficiencies in the winter road system.

From the Webequie First Nation perspective, an all-season road provides community benefits by providing year-round access to the provincial highway system. In addition, the community would generate economic development opportunities related to the transportation of goods and services between Webequie, the mine development area, and the south.

Figure 6-1: Matawa Winter Road Re-Alignment Study



Source: Neegan Burnside Ltd., 2008.

6.5.2 Cliffs Ferroalloys Black Thor Mine Integrated Transportation System (2011)

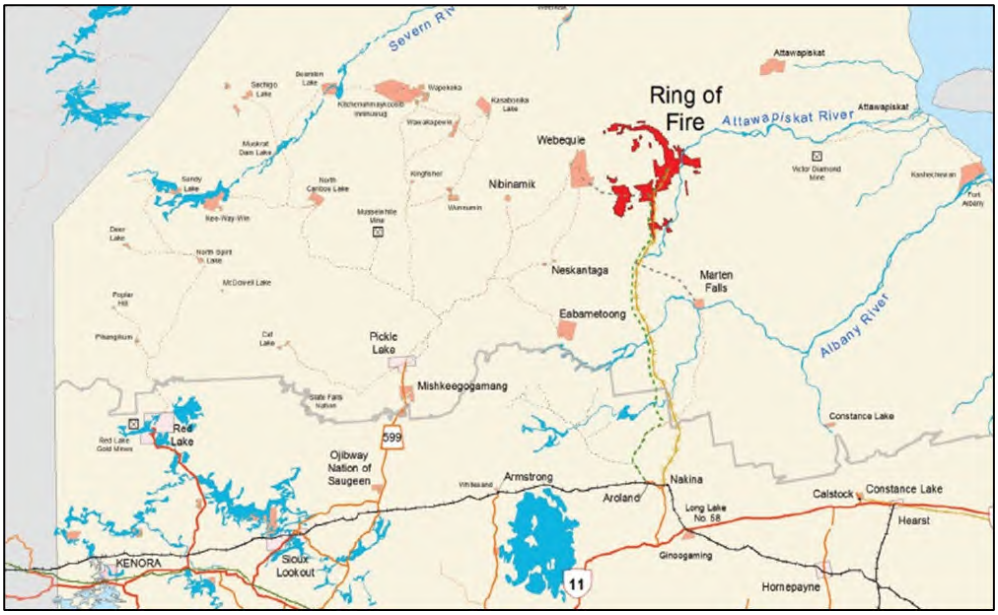
In 2011, Cliffs Natural Resources (“Cliffs”), announced its intention to move forward with permitting and development of the Black Thor Chromite Mine in the McFaulds Lake Ring of Fire area. As part of the Black Thor Chromite Mine study, Cliffs developed an Integrated Transportation System (ITS) that optimized all-season road connection of the Black Thor mine assets and facilities with the provincial highway system and the CN Rail system at Highway 584 near Nakina. Around the same time, KWG Resources (KWG), also active in the McFaulds Lake area, studied transportation options into the Ring of Fire area and identified a preference for a rail/road link that followed a similar corridor to the Cliffs proposed road corridor (Northern Policy Institute, 2015).

From the Webequie First Nation perspective, the preferred ITS selected by Cliffs did not include an all-season road connection to Webequie, thereby limiting the potential for the community to transport goods and services to the mine development area and potential for connection to the provincial highway system.

Around the same time, KWG, a junior mining company that is also active in the McFaulds Lake area, studied transportation options into the Ring of Fire area and identified a preference for a rail/road link that followed a similar corridor to the Cliffs proposed road corridor (Northern Policy Institute, 2015). The KWG preferred rail/road option (yellow hatched alignment) is also shown in Figure 6-2.

Cliffs no longer has mining interests in the Ring of Fire area (CBC News, 2013).

Figure 6-2: Cliffs Ferroalloys Proposed All-Season Road Route to Highway 584 and KWG Resources Proposed Rail/Road Route to Nakina



Source: Northern Policy Institute, 2015.

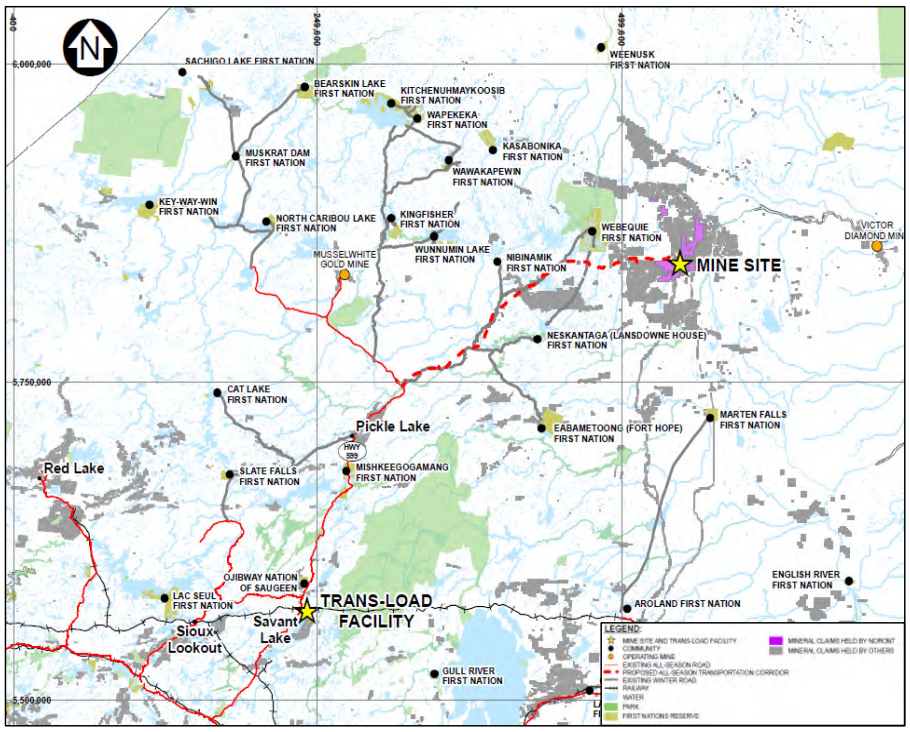
6.5.3 Noront Resources Eagle's Nest Mine Access Road (2013)

In 2013, Noront Resources prepared a draft federal/provincial EIS /EAR for their proposed Eagle's Nest mine in the McFaulds Lake area, including an examination of alternative road routes and types (e.g., winter, all-season and combined winter/all-season) that would connect the mine to the provincial highway system (Mineral Industry Consultants, 2012), as shown on Figure 6-3. The Noront draft EIS/EAR process was not completed Canadian Impact Assessment Registry, 2019). The provincial notice of approval for the Noront EA ToR for the Eagle's Nest Mine Project included the requirement that Noront re-screen four road corridors before reaching a conclusion on its access road corridor. The draft EIS/EAR for the Noront Eagle's Nest Mine Project was prepared in advance of the approval of the ToR for the provincial EA and does not reflect the requirement to re-screen access road corridors. The MECP EA Permissions Branch did not review the draft EIS/EAR. The WSR Project Team understands that the document was reviewed by federal agencies and comments were returned to Noront. As part of the transition to the new *Impact Assessment Act* on August 28, 2019, the Agency issued a Notice of Termination of the federal EA for the Eagle's Nest Mine Project (Webequie Supply Road, 2020).

In 2022, Noront Resources was purchased by the Australian miner, Wyloo Metals (Wyloo Metals, 2022).

From the Webequie First Nation perspective, an all-season road provides community benefits by providing year-round access to the provincial highway system. In addition, the community would generate economic development opportunities related to the transportation of goods and services between Webequie, the mine development area, and the south (Webequie Supply Road, 2020).

Figure 6-3: Noront 2013 Proposed Eagle's Nest All-Season Transportation Corridor



Source: Noront Resources Ltd., 2013.

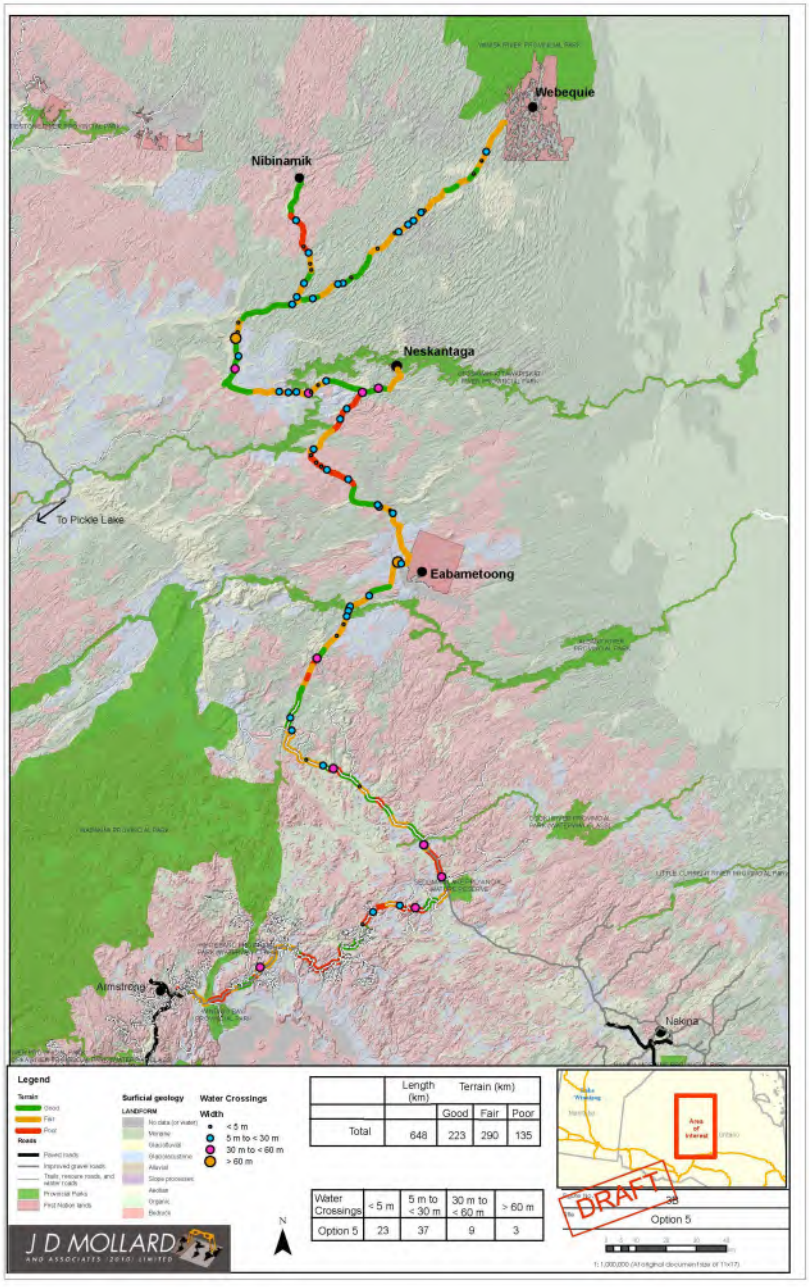
6.5.4 All-Season Community Road Study (2016)

Webequie First Nation, in partnership with three other First Nations (Neskantaga, Nibinamik and Eabametoong), completed the All-Season Community Road Study (ASCRS) in June 2016 (Webequie Supply Road, 2020). The purpose of this study was to examine options for interconnecting these Indigenous communities to the provincial highway system, with the goal of providing community social and economic benefits. Many alternatives were examined, including those previously preferred by Noront Resources, Cliffs and KWG Resources (Webequie Supply Road, 2020).

From the community engagement and assessment completed, a preferred corridor was identified with a general east-west orientation that connected the four communities to the provincial highway system at Pickle Lake as shown on Figure 6-4. The preferred corridor/road from the 2016 ASCRS did not connect to the McFaulds Lake area due to unresolved issues and concerns expressed by some participating First Nations about mining development in the Ring of Fire area (Webequie Supply Road, 2020).

From the Webequie First Nation perspective, the preferred alternative emerging from the 2016 ASCRS provided a number of social and economic benefits, including the interconnection with other Indigenous communities. However, there was additional interest in continuing to examine a supply road connection into the McFaulds Lake area. The connection between Webequie and McFaulds Lake is considered important to Webequie First Nation, as it could provide broader economic development opportunities and social benefits above and beyond the benefits of an all-season community road to Pickle Lake (Webequie Supply Road, 2020).

Figure 6-4: All-Season Community Road Study - Preferred Alternative



Source: All Season Community Road Study, 2016.

6.5.5 All-Season Community Road Study – Phase 2 (2017)

In 2017, the Nibinamik and Webequie First Nations continued the ASCRS on their own to refine the preferred corridor analysis from the previous phase of the study (CBC News, 2017). The ASCRS – Phase 2 involved many discussions with Nibinamik and Webequie land users, Elders and youth to refine the corridor centre line and to determine support for an east-west connection to the provincial highway system at the NORT North Road/Pickle Lake Road. The Phase 2 study also included more extensive data collection, including field studies and gathering of more Indigenous Knowledge information. The Phase 2 study identified a refined east-west all-season road corridor as shown on Figure 6-4, which has essentially the same purpose of connecting Webequie and Nibinamik to the provincial highway system at Pickle Lake (Webequie Supply Road, 2020).

From the Phase 2 study, it was determined there is reasonably strong support for an all-season community road to the provincial highway system, but not clear and full community support amongst the potentially connected and/or affected First Nations for interconnection of the all-season road to mining activity in the McFaulds Lake area (Webequie Supply Road, 2020).

From the perspective of the Webequie First Nation, there was general community and political support for an all-season community road connection to the provincial highway system. However, there was concern that the discussion of the all-season road did not include an extension from the community eastwards to McFaulds Lake, which was thought to provide potential for greater economic development opportunities associated with the proposed mine exploration and future mining operations (Webequie Supply Road, 2020).

The above studies, as background and context, provide the foundation for the development of the proposed WSR. In particular, the ASCRS and refined Phase 2 study helped to guide Webequie First Nation to identify the current preliminary preferred corridor for the Project, including consideration of alternatives (Webequie Supply Road, 2020).

6.6 Provincial Plans and Polices

6.6.1 Far North Act, 2010

The *Far North Act, 2010* as amended in December 2021 sets out a joint planning process between First Nations communities and the province of Ontario. The *Far North Act* facilitates land use planning decisions in the Far North by governing how the province will work with Indigenous communities to identify areas where development can occur, and areas that should be protected.

Section 1 of the *Far North Act* outlines:

The purpose of this Act is to provide for community based land use planning in the Far North that:

a. Sets out a joint planning process between the First Nations and Ontario[3];

b. Supports the environmental, social and economic objectives for land use planning for the peoples of Ontario that are set out in Section 5; and

c. Is done in a manner that is consistent with the recognition and affirmation of existing Aboriginal and Treaty Rights in Section 35 of the *Constitution Act, 1982*, including the duty to consult. 2010, c. 18, s. 1.

[3] Community-based land use plans require provincial approval.

The Far North is defined in the Act as:

a. The portion of Ontario that lies north of the land consisting of:

i. Woodland Caribou Provincial Park;

ii. The following management units designated under Section 7 of the *Crown Forest Sustainability Act, 1994* as of May 1, 2009: Red Lake Forest, Trout Lake Forest, Lac Seul Forest and Caribou Forest;

iii. Wabakimi Provincial Park; and

iv. The following management units designated under Section 7 of the *Crown Forest Sustainability Act*, 1994 as of May 1, 2009: Ogoki Forest, Kenogami Forest, Hearst Forest, Gordon Cosens Forest and Cochrane-Moose River; or

b. The area, if any, that is set out in the regulations made under this Act and that describes the area described in clause (a) more specifically; ("Grand Nord").

The *Far North Act, 2010* legislation was put in place to support the protection of environmental, cultural, and economic values for land use planning and to confirm that community based land use planning is done in a manner consistent with recognition and affirmation of existing Aboriginal and Treaty Rights in Section 35 of the *Constitution Act, 1982*. Ontario's *Far North Act, 2010* was represented as a significant piece of legislation for Indigenous communities in the North, fortifying the importance of community based land use planning and the exercise of Indigenous rights of stewardship and jurisdiction over specific territories in Ontario. The province must approve CBLUPs.

Under the *Far North Act, 2010*, the CBLUP process was developed by the province as a vehicle to explore with Indigenous communities and groups, among other land uses, the potential for permissible use of lands for forestry in First Nation's areas of interest. ToRs for CBLUPs Terms of Reference have noted in the objectives that plans would include consideration of the following (Eabametoong and Mishkeegogamang First Nations, 2013):

- Traditional and Customary Use;
- Conservation and Protection;
- Forest Management (commercial forestry);
- Forest Management (non-timber forest products);
- Tourism (and Eco-Tourism);
- Geoscience and the Mineral Sector (exploration and mining);
- Recreation;
- Water Conservation and Protection;
- Renewable Energy;
- Access and Infrastructure;
- Climate Change; and
- Fire Management.

ToR for Webequie First Nation's CBLUP was signed in 2014. A Draft CBLUP was prepared and dated 2019. This Draft CBLUP has not been released to the public. SNC-Lavalin reviewed this document internally.

In the case of Webequie First Nation, an application was submitted to the MNRF for an exception order for the WSR Project on January 29, 2018. The application was accepted by the Minister on March 2, 2018. The *Far North Act, 2010* was amended in 2021 and removed Section 12 that had previously outlined that new developments required a Lieutenant Governor in Council Order or Minister's Order before proceeding with development in areas that do not have a CBLUP (Environmental Registry of Ontario, 2021).

6.6.2 Northern Ontario Transportation Plan

The draft Northern Ontario Transportation Plan, 2020 was developed to serve as a guide to help build a modern and sustainable transportation system for people in Northern Ontario. It contains actions that will connect communities, provide safer and more reliable travel and unlock economic potential in the region. Goal 6 of this Plan outlines reliable travel options for remote and Far North communities. This plan is a living document and will be updated with actions to reflect the evolving needs of the region.

6.6.3 The Project is Aligned with the Objectives of this Plan and Will Support the Goal of Achieving Sustainable Development for Northern Ontario.Fisheries Management Plan

The Fisheries Management Plan as administered by MNRF is designed to highlight and protect the value of the diversity of the lake and to be flexible and adaptable to a wide range of future conditions. The planning process considers the lake in a holistic manner and includes a range of management options to secure a healthy lake environment that conserves the diversity of the fish community and provide opportunities to contribute to the social and economic well-being of the surrounding area. Each specific zone outlines restrictions and guidelines for sport and conservation activities as it relates to fishing to verify sustainability of the region's aquatic life. No specific fisheries management plans have been approved for FMZ 1 – 3 (MNRF, 2023h).

6.7 Land Use Plans and Policies

A number of remote fly-in and winter road access First Nation communities, have been (or are currently) undertaking community land use planning, which considers the remote nature of these communities. Where information is available, the following section describes community based land use planning, on-reserve land use planning and other planning processes. It is noted that most communities do not publicly share their community plans, and currently, information is limited on such communities that have not provided information for the Socio-Economic Baseline for the Project.

Many First Nation communities have developed CBLUPs, which outlines land ownership, land access, and traditional uses on the land.

The Webequie First Nation's strategic approach to land use planning encompasses both community-specific and broader territorial considerations. Through the formulation of the CBLUP and the On-Reserve Land Use Plan, Webequie is navigating the intricate balance between sustainable development and cultural preservation. These plans, along with the Webequie CCP, collectively reflect the community's commitment to harmonizing growth, resource utilization, and traditional values within the framework of their unique Three-Tier governance model.

- Webequie First Nation's CBLUP consists of a Three-Tier model which identifies three areas around the community of Webequie:
  - The Reserve Land Base refers to the Webequie First Nation Reserve where a First Nation Canada-Ontario relationship exists through Treaty No. 9 and the constitutional and legislative frameworks of Canada and Ontario.
  - The Cultural Land Base tier is within a one-day walking distance (roughly a 40-50 km radius) in any direction from the community that is used extensively for traditional harvesting and Anishinaabe cultural livelihood activities.
  - The Economic Land Base is a sufficient base of useable land as part of the community's physical assets, this may include land appropriate for conventional economic development, land suitable for traditional pursuits, and land for community purposes such as housing and recreation.

6.7.1 Draft Community Based Land Use Plan

Up to 2019, Webequie First Nation worked with the Minister of Natural Resources and Forestry to put forward the CBLUP. This land use planning process included incorporating and documenting land utilization patterns, sites of Indigenous cultural significance and historical and current traditional practices to establish the Webequie CBLUP in the context of the *Far North Act, 2010* which provides the authority, purpose, and process for Webequie First Nation community based land use planning (Ministry of Natural Resources and Forestry, 2022f). The plan details the community's current land use and describes their ambitions, philosophies, and objectives for future land uses as it pertains to traditional and resource use, cultural heritage and protection, environmental protection and enhancement, mineral exploration and development, infrastructure and development, tourism, forestry, aggregate use, and commercial use (Webequie First Nation, 2019a).

The creation of the CBLUP involved planning, engagement with community members, and neighbouring First Nations. As part of the vision for the community, Webequie shows respect for neighbouring communities that have shared the land and, therefore, will incorporate shared interests in the development and implementation of the land use plan. Inherent to the plan, Webequie has a belief that they are, in fact, stewards of the land and have the need and the right to live off the land. The Elders and the community as a whole realize the importance of both development and protection. They also believe that living off the land for sustenance is vital to protect cultural heritage, while understanding that resources in the planning area (as well as in Webequie's broader area of interest) are valuable for the well-being and advancement of the community [Webequie First Nation, 2019a]).

The Draft Webequie CBLUP has a proposed planning area of 2,875,000 ha within the geography established Treaty No. 9 area (Webequie First Nation, 2019a). The area constitutes a larger traditional territory within which Webequie Anishininniwuk continue to exercise their Aboriginal and Treaty Rights and carry out Indigenous livelihoods and culture. The Draft CBLUP also cites all-season road options for Webequie First Nation in the areas west, south and east of the community, which may provide for synergies with access to nearby mineral sector projects. In this context, it is important to note that Marten Falls is in the process of preparing its own CBLUP and a portion of the Project area is included in the Marten Falls ToR CBLUP planning area of interest. Further discussions between Webequie and Marten Falls, including a determination of how to proceed with land use designations in overlapping planning areas will be required prior to either CBLUP being finalized.

The Draft Plan recommends eight land use areas, with land use designations of Dedicated Protected Area, EMA, and General Use Area. All land use designations identified in the CBLUP developed to-date are 'Draft' and subject to further revision.

The location of the proposed WSR corridor is consistent with the recommended land use areas and designations in the Draft Webequie CBLUP. Specifically, the alternative road concepts are located primarily in the designated areas of "General Use Area" and "Other Areas", with a minor segment located within an "EMA". The intent and permitted uses in these designated areas are described below.

- General Use Area – The intent of the General Use Area is to protect cultural values and respect traditional use, while enabling resource development that promotes sustainability for communities and future generations. Cultural and traditional practices by Indigenous people are ongoing in this designated area, where Aboriginal and Treaty Rights are respected. Economic development opportunities include mineral exploration and development, with an emphasis on benefits for First Nations communities, including infrastructure (e.g., roads, transmission lines and other linear corridors) for community access and resource development, small-scale community-led commercial forestry, renewable energy and tourism (Webequie First Nation, 2019a);
- Other Areas – The Other Areas designation captures the east-west section of the alternative concepts and is considered a shared area with Marten Falls and Neskantaga First Nations and where Webequie and the MNRF/ Ontario have determined not to advance planning direction at the Draft Plan stage, pending further additional dialogue with these communities to confirm direction prior to finalizing the Plan; and

- EMAs – The intent of EMAs is to support a range of resource development opportunities while providing for protection of sensitive First Nation cultural sites, historical travel routes, cultural waterways and harvesting areas, as well as fish and wildlife habitat, muskeg, peatlands, wetlands and remote tourism and recreation values.

The “Corridor EMA”, within which a short segment of the WSR is situated, is a 129,000 ha area located to the south of the community. It is a shared area with Neskantaga First Nation and Nibinamik First Nation and contains historic travel routes from Webequie to these two communities (Webequie Supply Road, 2020). The intent of the Corridor EMA is to enable major access corridors to Webequie First Nation and the Ring of Fire, while also protecting cultural and ecological values in the area. The area supports all-season road, hydro transmission and communications corridors to Webequie First Nation. It also supports options for all-season access to adjacent mineral potential areas. Aggregate extraction in the area is supported, while recognizing the need to respect sensitive cultural values. Mineral sector activities are also supported (Webequie Supply Road, 2020).

The “Prime Lake EMA” is located immediately east of the community and encompasses almost 34,000 ha. The area is a focus for Webequie-led opportunities to connect the community with the Ring of Fire through all-season road planning and associated EA processes. The intent of this designation is to enable resource development activities and support associated access and infrastructure, including Webequie community supply road interests, in a way that respects First Nation use of the land, and cultural, recreation and tourism values. Mineral exploration and development are a supported activity and aggregate extraction may be pursued. Road use restrictions may be considered on some tourism and resource access roads (e.g., forest access roads) to preserve remoteness in the area. For new roads, there is an emphasis on minimizing the footprint around waterways and water crossings to protect cultural and natural values (Webequie Supply Road, 2020).

Table 6-2 summarizes the land use activities direction as explained in Webequie’s Draft CBLUP (Webequie First Nation, 2019).

Table 6-2: Webequie Draft CBLUP– Summary of Land Use Activities Direction

Land Use Activities Permitted (Yes, Maybe or No)	Zone 1 Western Upland EMA	Zone 2A Winisk Watershed Dedicated Protected Area	Zone 2B Kaa-shi-ti-kwayak (Waterway) Dedicated Protected Areas	Zone 4 General Use Area	Zone 5 Waanaabiikaan (Bowl Rock) EMA	Zone 6 Corridor EMA	Zone 7 Prime Lake EMA
First Nation Indigenous uses of the land, including (but not limited to) hunting, fishing, and gathering are respected as historical and current uses in all areas.							
Commercial Activities							
Aggregate Extraction	Yes[1]	Maybe[2]	Maybe[2]	Yes	Yes[3]	Yes[1]	Yes[1]

Source: Webequie First Nation, 2019.

Notes:

1 Where possible, aggregate extraction will be directed away from waterways, sensitive water features, fish habitat and spawning areas. Protection of First Nation cultural values will be a top priority in the consideration of new proposals.

2 Aggregate extraction is generally discouraged in Dedicated Protected Areas but will be considered in association with all-season, community and resource access roads, in keeping with the protection intent of the areas. Aggregate extraction in the area of Zone 2A, the Winisk Watershed General Community Livelihood Use Dedicated Protected Area, that falls north of Winisk River Provincial Park will not be permitted (see Management Direction for Dedicated Protected Areas, Part 'B').

3 Aggregate extraction is permitted for local use within the area for community and resource access purposes. Where possible, aggregate extraction will be directed away from waterways, sensitive water features, fish habitat and spawning areas. Protection of First Nation cultural values will be a top priority in the consideration of new proposals.

4 New commercial fishing opportunities may be brought forward by First Nations and their partners, subject to resource management considerations and a joint Webequie First Nation- MNRF decision-making approach.

5 New commercial fishing opportunities may be considered where consistent with the overall intent of Dedicated Protected Areas and the conservation of cultural and ecological values. Further management direction may be provided through a protected area planning process in collaboration between Webequie First Nation and MNRF.

6 First Nation people continue to commercially trap on community member-held trap lines across the area.

7 Access to Crown land in the Far North for waterpower, wind power and solar power will only be granted to First Nations and their partners (see Strategic Direction for further information).

8 Commercial power generation is not emphasized in the area but may be considered. Small-scale renewable energy in support of existing and future uses (e.g., tourism and associated facilities) is permitted.

[9] Commercial Power Generation is not permitted in Dedicated Protected Areas. Opportunities for small-scale wind, water or solar power generation to support permitted uses and activities will be considered.

[10] Consideration will be given to new commercial waterpower development proposals with minimal disturbance to waterways and water systems to secure protection of cultural values, sensitive sites and fish spawning areas.

[11] Commercial waterpower development is not supported. Opportunities for wind or solar power development may be pursued.

[12] The intent is for Webequie First Nation to take a lead role in new community-led commercial forestry opportunities, with consideration for partnerships with neighbouring First Nations and other parties. New commercial forestry must be enabled through a new approval under the *Environmental Assessment Act*, to be sought by MNRF in collaboration with Webequie First Nation and their partners.

[13] The intent is for Webequie First Nation to take a lead role in new commercial tourism opportunities, with consideration for partnerships with neighbouring First Nations and other parties, subject to resource management considerations and a joint Webequie First Nation- MNRF decision-making approach.

[14] Remoteness will be maintained in the area by directing linear corridors away from sensitive cultural and ecological features, minimizing water crossings and seeking synergies in routing between different proposals and developments.

[15] Roads and other linear corridor developments are generally discouraged in Dedicated Protected Areas but will be considered as necessary for community access and for resource access to adjacent areas. Priority will be given to all-season road development to connect Webequie with neighbouring communities, the provincial road network and nearby resource development projects, with an emphasis on consideration for routing options in the southernmost part of the area near the community and Ring of Fire. For new roads and corridors, emphasis will be given to minimizing water crossings, protecting water systems, fish and wildlife habitat and cultural values. Where possible, the number of linear disturbances should be minimized and synergies in routing sought between different proposals and developments.

[16] Private: No new land disposition for the private use of individuals is permitted, except for minor dispositions in support of existing uses (e.g., reconstruction of a septic system). Renewal of existing tenure for authorized uses is permitted. Commercial: New requests and/or transfer requests for commercial land use disposition to support approved activities may be considered subject to review per Note above.

[17] Roads are permitted for community and resource access while recognizing the need to preserve remoteness in the area. Remoteness may be maintained by:

- Minimizing the number of road developments in the area;
- Building roads to a minimum possible standard and considering temporary roads;
- Directing development away from waterways and minimizing water crossings;
- Avoiding culturally and ecologically sensitive areas;
- Considering access and timing restrictions on some resource access roads; and
- Access planning to protect remote tourism values.

Major road access corridors are discouraged in the area while recognizing the potential need to consider future community and resource access.

[18] Community, resource access and major access roads will be considered in the area. For resource access roads, remoteness may be maintained by directing development away from waterways and minimizing water crossings, avoiding culturally and ecologically sensitive areas and considering access restrictions.

[19] New roads may be restricted from public use to preserve remoteness, protect culturally and ecologically sensitive areas and tourism values.

[20] Webequie First Nation does not encourage catch and release fishing for cultural reasons.

[21] Further management direction for the area may be provided through a protected area planning process in collaboration between Webequie First Nation and MNRF.

[22] For new commercial baitfish activities, the intent is for Webequie First Nation and their membership to take a lead role, with consideration for partnerships with other parties. New commercial baitfish operations will limit the sale of baitfish to use on the waterways from which they have been harvested. Proposals for new activities are subject to resource management and sustainability considerations.

[23] For guidance on mineral exploration and development in the area, please see Management Direction for the area and Strategic Direction for Mineral Exploration Development.

6.7.2 Webequie First Nation On-Reserve Land Use Plan

In 2019, Webequie First Nation put forward the Webequie First Nation On-Reserve Land Use Plan (Webequie First Nation, 2019b). The reserve is approximately 34,279 ha. This plan was developed to provide guidance for community land use and development projects. It established a shared community vision; outlined the types of development and land uses that are allowed, and where; set guidelines for development; and outlined a process for authorization. The On-Reserve Land Use Plan applies specifically to Tier 1 Reserve Land – defined as where the Webequie people live. The plan outlines a clear and transparent policy for land management within the Tier 1 lands and action items for the future.

The plan was prepared using input from different sources including:

- Webequie members;
- Webequie Employment Department;

- Information from the 2017 Housing Assessment;
- 2014 Capital Planning Study prepared by AECOM;
- 2017 Airport Redevelopment Plan;
- Draft CBLUP; and
- CCP Interim Report – 2016.

The Webequie On-Reserve plan includes a review of:

- Identifying the goals of the community and what they are planning for;
- Relevant map diagrams showing existing infrastructure, and maps showing proposed services;
- Information on history, language and culture;
- Population and membership as well as age and gender information included;
- Employment and employer statistics;
- Housing statistics and information; and
- List of existing infrastructure and proposed repairs/replacements and expansions.

Mapping included in this plan (shown on Figure 6-5 to Figure 6-9 below) indicates where and what could be built within the reserve and includes an arena, expansion of water and sewer, new housing, a multi-use centre, expansion or new portables for the school, expansion of the nursing station, expansion of the band hall and a new business centre. The plans also include a map of future roads, airport expansion and camp locations. The plan includes four priority areas for future housing locations within the reserve. Webequie First Nation population is anticipated to grow, and their average annual growth rate has been 2.6% from 2002 – 2017. The plan forecasted 1,159 members living on-reserve by 2037 (Webequie First Nation, 2019b). A review of the existing housing identifies that there will be a housing shortfall on-reserve. Approximately 150 houses need to be built over the next 20 years to aim for “uncrowded” housing conditions – with an average of 4 people per home. Along with new housing, the reserve will require new utilities and services to support the growing population. Economic development within the community includes the mining activity in the area and the growing eco-tourism opportunities. The Plan also outlines general guidelines for environmental and cultural protection to verify that the new development protects traditional uses, culturally sensitive sites, environmentally sensitive areas and encourages green design and buildings (Webequie First Nation, 2019b).

6.7.3 Webequie Comprehensive Community Plan

A draft Webequie CCP was completed in January 2021 and was prepared over 4+ years with Elders, community members, Webequie staff and leadership (Webequie First Nation, 2021). The purpose of the Webequie draft CCP is to lay out a roadmap for the future of the Webequie community and how to work together to achieve this vision. The draft CCP is complementary to the CBLUP and other community plans, and is another community-led process, rooted in Webequie's Three-Tier governance model that supports reconciliation, rebuilding and healing. The roots of the Three-Tier governance model come from the Webequie Anishininniwuk Elders. Before Treaty No. 9 was signed, they were able to see that change was imminent and created the Three-Tier model to maintain their relationship with the Creator. It offers a model for respectful relationships with neighbouring communities, government and industry (Webequie First Nation, 2021).

This document is a living document that will change and grow with the Webequie community. The land areas around the community that are inherent in the Three-Tier model include:

- Tier 1 – Tawin – Community Land Base: This is the home of Webequie people and where members live;
- Tier 2 – Tashiikawiin/Tashiiwiitoo – Protected Traditional Area: This is the area within a one-day walk (roughly 40-50 km radius) from the community. This area is used for traditional harvesting and Anishinabek cultural livelihood and supports who the Webequie people are; and
- Tier 3 – Bimachiiowiin Akkii – Area of Mutual Benefit: This is the area within another one-day walk and where Webequie people, neighbouring communities and outside parties can realize benefits from stewardship and development activities (Webequie First Nation, 2021).

To prepare the Webequie draft CCP, events and activities included one-on-one meetings and interviews, 8 community gatherings, 5 specific youth events, contests and a full week to focus on planning in Webequie (Webequie First Nation, 2021). The Webequie draft CCP outlines the history of the community; the current community resources, conditions and governance; and the plans moving forward to build a sustainable, prosperous community.

The CCP focused on 8 different areas within the community and goals were created under each theme:

- Education and training;
- Cultural Vibrancy and Traditional Life;
- Housing and Infrastructure;
- Environmental Quality and Relationship with the Land;
- Community Health and Wellness;
- Family and Social Conditions;
- Economic Development; and
- Community Leadership and Governance.

Each topic focused on the strengths and challenges of each and created goals related to the topic. To reach these goals, four action categories were created, depending on the type of project they related to. The four action categories are: major capital projects, minor capital projects and community improvements, programs and plans and policies. The action categories also included timing of when to start certain projects or outline if they have already started and a monitoring and evaluating tracker. Detailed action items are also outlined within the document which specify steps required to address the issue, who needs to be involved and how they relate to the specific goals outlined in the Webequie draft CCP (Webequie First Nation, 2021).

6.8 Industrial Land Use

The economy of Northern Ontario relies heavily on resource extraction, with the mining, aggregate and forestry industries significant factors in land use planning in the region. The Ring of Fire, a significant mineral development region has long-term potential to contribute to the Ontario economy (Ministry of Mines, 2022). These contributions include creating more jobs, generating revenue, building infrastructure, and bringing prosperity to communities to the north, including First Nation communities. Minerals found in the Ring of Fire to-date include: chromite, copper, zinc, gold, diamond, nickel and platinum group elements (Ministry of Mines, 2022).

In April 2023, leaders from 10 Treaty No. 9 First Nations from announced a lawsuit against the Ontario and Canadian governments that could fundamentally change decision-making authority in the Treaty No. 9 territory (CBC News, 2023).

The First Nations leading the lawsuit intend to establish co-jurisdiction in the Treaty No. 9 territory that would require consent of Indigenous Nations' way of life impacted by resource development.

The draft statement of claim mentions the objectives of Indigenous Signatories to the Treaty intended "to preserve bimaadiziwin in Ojibwe or pimaatisiium in Cree – happiness, prosperity, and protection of their traditional way of life" (APTN News, 2023). Mino-Bimaadiziwin translates to "into living a complete, healthy, and good life" which represents an Indigenous philosophy for a way of living (Thomas, 2020). Some of the key principles of Mino-Bimaadiziwin are to maintain a sacred relationship with all elements of creation including, trees, fish, birds, animals, water, plants, people, and everything else provided by the Creator, and to live in harmony and coexistence. Mino-Bimaadiziwin and other Indigenous laws represent Indigenous identity, outlining the roles, duties, and obligations of being a member of an Indigenous Nation (Thomas, 2020). The First Nations leading the above lawsuit against Ontario and Canadian governments intend to establish co-jurisdiction in the Treaty No. 9 territory that would require consent of Indigenous Nations' way of life impacted by resource development.

Ontario established the Critical Minerals Strategy in 2021, which is a comprehensive five-year plan to secure the province's position as a reliable global supplier of responsibly sourced critical minerals (Ministry of Natural Resources and Forestry, 2022h). Critical minerals are those with industrial, technological or strategic applications for which there are few viable substitutions and are currently at a higher supply risk due to geopolitical considerations and market demand (Ontario Mining Association, 2022). The success of the Critical Minerals Strategy is dependent on six components, referred to as the six pillars in the strategy, which include:

1. Enhancing geoscience information and supporting critical mining exploration;
2. Growing domestic processing and creating resilient local supply chains;
3. Improving Ontario's regulatory framework;
4. Investing in innovation, research and development;
5. Building economic development opportunities with Indigenous partners; and
6. Growing labour supply and developing a skilled labour force.

Mining activity is a large driver of the regional economy (see Section 5). Mining is regulated under the provisions of the provincial *Mining Act*. The purpose of the *Mining Act* is to "encourage prospecting, online mining claim registration and exploration for the development of mineral resources, in a manner consistent with the recognition and affirmation of existing Aboriginal and Treaty Rights in Section 35 of the *Constitution Act, 1982*, including the duty to consult, and to minimize the impact of these activities on public health and safety and the environment" (Ministry of Mines, 2023). Registering a new mining claim and managing an existing mining claim, is done online through the Mining Lands Administrative System (MLAS). Applicants are required to create a MLAS user account, which allows them to view

active unpatented mining claims, register new mining claims, manage user mining claims, and buy or renew a prospector's license. Non-registered users are only able to use the MLAS map viewer to view active unpatented mining claims.

Under Section 50 of the *Mining Act*, a mining claim provides exclusive rights for the claim holder to explore for minerals and rights to enter, use and occupy surface rights as necessary for exploration and development. A mining claim does not provide mining rights for the land to the holder of the claim. Someone that holds a prospector license may stake out a mining claim on land that is open for staking and prospect for minerals on any Crown land, including land traditionally used by Indigenous Peoples and communities (Natural Resources Canada, 2013).

The Government of Ontario is working directly with First Nations through bilateral agreements that support each individual First Nation community's needs and priorities (Ministry of Mines, 2022). Proposed all season road projects in the Ring of Fire area are led by First Nation communities, which include project planning through EA/IAs, and maximizing benefits and opportunities for First Nations communities. This includes Marten Falls First Nation and Webequie First Nation leading the federal and provincial EA/IAs for the Marten Falls Community Access Road and Webequie Supply Road, respectively (Ministry of Mines, 2022b).

According to Ontario, building economic development opportunities with Indigenous partners is critical to the success of the strategy as collaboration on resource development projects can help in reconciliation with Indigenous Peoples and communities and provide Socio-Economic benefits to Indigenous communities. To demonstrate Ontario's commitment to reconciliation and support economic development opportunities to build healthy and prosperous communities across Ontario's north, a resource revenue sharing agreement with Indigenous communities was developed (Ministry of Mines, 2022). This agreement allows Indigenous communities to share in the economic benefits of forestry and mining operations near their communities. This revenue can be used for economic development, education, health, community development, and cultural development. There are currently 35 Indigenous communities involved in the revenue resource sharing agreement with Ontario, including communities represented by Grand Council Treaty #3, Mushkegowuk Council, and Wabun Tribal Council. Aboriginal Participation Fund provides $4.7M annually to support communities' participating in consultation, education and relationship-building activities related to mineral exploration and development (Ontario Mining Association, 2022).

Aggregates include sand, gravel and bedrock that are typically used in construction projects. Aggregate resources are regulated under the *Aggregate Resources Act*. Aggregate extraction on Crown land requires an Aggregate Permit and on private land it requires an Aggregate License if it is within an Aggregate Designated Area (Ministry of Natural Resources and Forestry, 2022a).

There is no information on industrial land use specific to Webequie First Nation.

6.9 Commercial Use, Outdoor Recreation and Tourism

Commercial use, outdoor recreation and tourism are important economic activities for a number of Indigenous communities'. Commercial use includes any activity or business that uses the resources from the land to provide income, such as commercial fishing, hunting and trapping. As fishing, hunting, trapping, and gathering wild plants has been a way of living for Indigenous Peoples across Canada for millennia, many Indigenous communities rely on these traditional activities as their source of income (Kumar et al., 2019). According to the Indigenous Tourism Association of Canada, recreation and outdoor activities (which includes outfitters, hunting, fishing, and wilderness guides, as well as various types of recreational and adventure camps, including recreational vehicle parks and campgrounds) is an important domain in the Indigenous tourism sector (Fiser and Hermus, 2019). In the 2018 census survey completed by the Indigenous Tourism Association of Canada, Ontario generated the second highest revenue in direct Gross Domestic Product (GDP), among all provinces and territories in Canada, from recreation and outdoor activities (Fiser and Hermus, 2019). Tourism is an important aspect as it provides an opportunity for visitors to learn about the history, experience, arts, and culture of Indigenous communities.

Recreational activities in the Indigenous communities involve community based sports and activities organized by the community administration or other groups such as schools. Recreation facilities typically include baseball diamonds, gym/community centres, hockey arenas, playgrounds, playing fields and other facilities. Youth and community events are hosted by communities.

The people of Webequie as part of the larger Anishinaabe society have a long history of living on the lands and waters within their traditional territories. In the past, prior to European contact and the fur trade, due to the climate and character of the northern environment, fish and game were found in different areas throughout the year and required the people to move and not establish permanent settlements (Driben, 1983). In summertime, camps near lakes and rivers were well-integrated communities with plentiful food, with fishing, as well as hunting and gathering, such as small game animals, birds, wild rice and berries being popular foods (Driben, 1983). Since the camps could be made up of several clans and contain hundreds of people, the camps were organized to feed large groups. When the weather changed, and winter came, hunting became the main source of food, requiring clans to break into smaller hunting parties (Driben, 1983). During these times, the Anishinaabe did not rely to a great extent on trapping, and although the people relied on animals such as rabbit and beaver for items such as clothing and blankets, the demand for furs was relatively low within the Indigenous population (Driben, 1983).

As the fur trade period unfolded, the people of Webequie, and other Nations, adjusted their social organization. Smaller trapping units replaced the larger hunting parties, to enable more ground to be covered quickly (Driben, 1983). During this time, trapping units could return to summertime camps and also travel from post to post as larger groups (Driben, 1983). During the early nineteenth century, favourable conditions for the fur trade began to diminish. Two reasons included the amalgamation of HBC and the Northwest Company in 1821. Around the same time, the region experienced a disappearance of large game, and people began to rely more on the HBC posts, however, living by the posts meant less income from furs, which created more hardship (Driben, 1983). In the decades that followed, the fur trade had peaked and less income was available from furs, and hunting, fishing and gathering became more important once again. These years also saw the disruption in the clan connections of the past (Driben, 1983).

Treaty No. 9 was signed in 1905, and with the Fort Hope Band (as it was known), the Treaty commissioners also promised the government would not interfere with the Fort Hope Band's economy, and this promise was largely kept for fifty years (Driben, 1983). During the 1960s, the government began to build schools in Fort Hope Band communities, including in Webequie, in response to complaints that the residential schools were destroying families (Driben, 1983). This impacted trapping since community members settled more in the growing communities where the children were required, and with no trapping income and not enough employment opportunities in the community, welfare rose dramatically (Driben, 1983). Subsequently, the government rushed to address the growing social and economic issues, and released what came to be known as the White Paper on Indian Policy. The White Paper programs led to a flood of jobs programs intended to increase employment and reduce dependency on welfare programs, however, they were eventually found to increase vulnerability of the community to government cut-backs and did not lead to economic independence (Driben, 1983).

Prior to the 1970's commercial trapping was a primary source of income for the Webequie people (Driben, 1983). Commercial trapping no longer serves as the main source of income for Webequie First Nation; however, the community is committed to maintaining this tradition for both economic and cultural reasons. An Elder from Webequie First Nation indicated:

> *"The people were given a gift by the creator and so began the life of Anishinawbek. For many generations and many winters, for so long, we have lived of the land. The atmosphere we have adopted of the changing times today has not halted us from being, and we will always remain as Anishnawbek. For so long, we have trapped and hunted here; long before the trapline system was introduced. It is the sacred responsibility of the people to take care of what has been given to us and to live in harmony with all other creatures, we will continue to do so as it was before."*
>
> *Webequie First Nation Elder* (Webequie First Nation, 2019a)

The Webequie Draft CBLUP outlines that there are 36 traplines located in the Webequie planning area and 13 are held by Webequie members (Webequie First Nation, 2019a). This disparity is regarded as an historical inequity by the Webequie community, owing to the history of the Treaty making, and the community's inclusion within the Fort Hope Band (Webequie First Nation, 2022).

Beginning in the 1960's Webequie First Nation members held commercial fishing licenses within the community's planning area which targeted whitefish, walleye and sturgeon (Webequie First Nation, 2019a). The last licences were held in the 1970's (Ministry of Natural Resources and Forestry, 2022f). Elders recall active commercial fishing operations during the 1960s and 1970s within Winisk, Chipai, Wapikopa and Kanachuan Lakes along with Winisk River (Webequie First Nation, 2019a). Currently, there are no commercial fishing operations in Webequie due to the changing economy and way of life in the North which made commercial fishing less viable. Low economic return, high transportation costs, reallocation of resources to support new tourism opportunities and new legislation and marketing systems were outlined as barriers to the commercial fishing industry in the CBLUP (Webequie First Nation, 2019a). The community is highly interested in re-establishing this tradition and seeking viable economic opportunities in the planning area (Webequie First Nation, 2019a).

Forestry is not undertaken commercially by the community apart from firewood collection (SNC-Lavalin, 2022). In the 1970s there was a government investment in sawmills in Webequie First Nation and Eabametoong First Nation to feed demand for lumber to supply home building, and as a means to create sustainable jobs. The sawmills did not succeed for several reasons including lack of profitability and management issues (Driben, 1983).

Tourist lodges, fly-in hunting and fishing camps and other tourist-related activities are also located within Webequie (Webequie First Nation, 2023a). There are eight First Nation community member-owned and operated resource-based tourism establishments and supporting infrastructure within the proposed Webequie CBLUP area and several others immediately adjacent to the west and south boundaries (Webequie First Nation, 2019a). These existing operations are primarily based on fishing. Spruce Shores Lodge is a family-owned business located north of Webequie that offers fishing and cultural tour packages (Webequie First Nation, 2023a). The community also hosts the Webequie Motel for lodging convenience and temporary accommodation.

The Webequie First Nation Reserve accommodates a variety of cultural tourist and outdoor recreational activities. The Webequie people welcome visitors to learn more about their culture and heritage. The community is accessible by air through Wasaya Airlines Limited and the Nakina Outpost Camps and Air Services (Webequie First Nation – Travel, 2023). Webequie has a Northern Store within the Webequie Business Centre which has food and general merchandise for sale. Webequie Motel at the Business Centre has five rooms and one suite (Webequie First Nation, 2023b). Tourism in the area is primarily focused on outdoor activities such as hunting and fishing (Webequie First Nation, 2023c).

Within Webequie First Nation Reserve, there is an outdoor rink in the winter but there is limited space for in-door recreational programs (Webequie First Nation, 2021). Cultural and recreational activities are ongoing within Webequie but they are limited and not open to everyone. There is a desire to grow the existing programs and include a community gardening program and increase youth drop-in sport activities (Webequie First Nation, 2021). Additional canoe trips, goose camps and regular youth workshops and outings are also part of the Action Plan within the draft CCP. Webequie First Nation is participating in the Community Aboriginal Recreation Activator Program which includes funding to hire an activator to create a recreation plan to meet the needs in their community and enhance community participation in sport and recreation (Ministry of Tourism Culture and Sport, 2022).

Webequie First Nation is situated along Winisk Lake and historically, Webequie First Nation people accessed Webequie by canoe. In 2017, Matawa Education piloted a canoe trip down the Winisk River to Webequie (Meeskwatay Dibaajimowin, 2017a). Another summer camp based near Camp Wabun paddled the traditional canoe route from Windigo Lake to Webequie over 35 days (Meeskwatay Dibaajimowin, 2017b). This trip is advertised through word of mouth and past campers.

6.10 Provincial Parks, Areas of Natural and Scientific Interest and Protected Areas

Provincial Parks

There are no federal, provincial, or regional/municipal protected parks and protected areas which overlap with the Project Footprint and Webequie First Nation.

- Albany River Provincial Park

The Albany River Provincial Park was established in 1989, starting at Lake St. Joseph at Highway 599 and traversing downriver, approximately 300 km to approximately 30 km west of Marten Falls. The Albany River is a key waterway for travel for Marten Falls First Nation members and other communities. Marten Falls First Nation members have cabins and camps which they use for harvesting and hunting within their traditional territory.

- Winisk River Provincial Park

The Winisk River Provincial Park is located to the north of the Webequie First Nation Reserve, approximately 2.17 km from WSR. The parkland is approximately 141,000 ha in size and boasts unique landforms including a large moraine and drumlin fields. The park is located within the traditional territory of Webequie First Nation. The Park was created in 1968 due to growing concerns about tourism in the Winisk River Area (Webequie First Nation, 2021). The Winisk River Provincial Park Interim Management Plan, 1991 provides direction for the management of the park (Ministry of Natural Resources, 1991). The only access to the park is by canoe, air or by float plane park (Ministry of Natural Resources, 1991). This park does not feature facilities for visitors but activities such as white-water paddling, canoe and kayaking, back country camping, fishing, hunting and snowmobiling are supported within the park (Ontario Parks, 2022). Five outpost camps are located along the Winisk River System to support fishing and hunting tourism. Additional tourism development will only be permitted once the management plan is complete (Ministry of Natural Resources, 1991). Webequie First Nation, – Ministry of Natural Resources and Forestry (MNRF) and Ontario Parks continue to have dialogue and collaborate for future opportunities in Winisk River Provincial Park.

ANSI

There are no ANSIs or Candidate ANSIs which intersect the Project Footprint or Webequie First Nation.

Conservation Reserve

There are no conservation reserves which intersect with the Project Footprint or Webequie First Nation.

WSR WEBEQUIE SUPPLY ROAD

February 09, 2024

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON
P0T 3A0

Re: Preliminary draft Weenusk First Nation Community Existing Conditions Summary
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Wabasse,

We hope that this finds you and your community well.

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR, or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities. At this time the Project Team is working toward completing the preliminary draft Socio-Economic Existing Conditions Report, that will be used to draft the effects assessment of the Project, which will be captured in the EA and IA.

The Project Team led by the Webequie First Nation is striving to gather as much Anishinaabemowin/Anishinaabe/Mushkegowuk Indigenous Knowledge as it relates to the Project and to help inform the socio-economic existing conditions.

This letter is to request your review of the draft Community-Specific Existing Conditions Summary document, which is based on the data and information collected for the Socio-Economic Existing Conditions Report of the EA/IA and presents the preliminary findings specifically collected for Webequie First Nation. The document summarizes information gathered through publicly available online resources and information gathered with communities, through interviews, focus groups and surveys, if the community participated in the Socio-Economic Primary Data Collection Program. The community-specific baseline information provided in the document is arranged as follows:

- **Community Setting** – including community overview, history, values and aspirations;
- **Population and Demographics** – including population, age, gender, indigenous identity, mobility and migration, etc.;

- **Housing and Accommodations** – including housing demand/ affordability/ supply/ quality and number of people living in a home;
- **Social Services and Infrastructure** – including supply and demand for education, childcare, healthcare, water, waste, energy, and communications;
- **Transportation** – including volume of, and demand for, road and air transportation;
- **Community Well-Being and Safety** – including social cohesion and culture, participation in social and/or cultural events, safety such as levels of domestic violence, assault, and nuisance such as air quality and noise concerns;
- **Regional and Local Economy** – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity;
- **Traditional Indigenous land and resource use** – including sites and areas used for traditional activities, and culturally and spiritually important sites and areas;
- **Land Use Compatibility** – including existing and proposed land uses;
- **Recreation and Tourism** – including land/waterway access and resource availability; and
- **Provincial Parks and Protected Areas** – including areas of natural and scientific interest and conservation reserves.

We want to prepare a holistic and comprehensive overview of information for Webequie First Nation and would much appreciate to hear back from you on this document as our team is always open to working with you for further improvement on the content.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Michael Fox
Regional Consultation Lead
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Heather Swan, Deputy Project Manager, Webequie Supply Road
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, AtkinsRéalis Inc (formerly SNC-Lavalin Inc)

2

February 15, 2024

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON
P0T 3A0

Dear Chief Wabasse,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, February 15, 2024, the package status indicates that it has been delivered to your community as of February 5, 2024.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Construction Camps and Other Project Opportunities.**

The livestreaming event is scheduled for **February 20th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek

input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to

	explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON
P0T 3A0

Dear Chief Wabasse,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, February 22, 2024, the package status indicates it was delivered to your community on February 5, 2024.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Bridges and Water Crossings.**

The livestreaming event is scheduled for **February 26th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: The Floating Road**

The livestreaming event is scheduled for **March 18th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek

input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local

	translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

March 20, 2024

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON
P0T 3A0

Dear Chief Wabasse,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, March 20, 2024, the package status indicates it was delivered to your community on February 5, 2024.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: What are the Protections After the EA?**

The livestreaming event is scheduled for **March 25th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may ask questions on the platforms during the livestream or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions during the radio show at 1-844-424-0500 or the same email above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Community Virtual Information Sessions for Round 3 of Consultation

In the upcoming months, the WSR Project team will be conducting community virtual information sessions for all communities for Consultation Round 3. The Project Team will share information about the EA/IA activities including a project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps.

There will be a presentation on the WSR Project activities. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The WSR Project Team also has a platform to allow for real-time translation to accommodate community members during the session.

The WSR Project Team will be sending a link to your community prior to the information session, so stay tuned and watch out for your community's invitation letter. In the meantime, please visit supplyroad.ca to find information on the WSR Project.

Livestream and Radio Show Series
The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Geology, Terrains, and Soils Preliminary Findings.**

The livestreaming event is scheduled for **April 22nd, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may ask questions on the platforms during the livestream or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions during the radio show at 1-844-722-4300 or the same email above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities
As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the

	EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

3

Sincerely,

Michael Fox
Regional Consultation Lead
Webequie Supply Road

c.c. Heather Swan, Deputy Project Manager, Indigenous and Community Engagement (ICE)
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, AtkinsRéalis Inc (formerly SNC-Lavalin Inc)

April 24, 2024

Dear Chief Wabasse,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps.

We will be offering a community information session, via Zoom, on **Monday, May 6th from 11:00-11:45am EST** for Webequie First Nation, where there will be a presentation on the WSR Project activities for Consultation Round 3. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/88526193380?pwd=lilqyF7PFpOXTfzj0bOnba54kqP1Lo.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID:** 885 2619 3380 **Passcode:** 539789

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, AtkinsRéalis
Craig Wallace, Project Manager, AtkinsRéalis

WEBEQUIE SUPPLY ROAD
Webequie First Nation Community Project Update and Review and Validation of Socio-Economic and Heath Existing Conditions Preliminary Results

Webequie First Nation, Band Hall
May 13 & 14, 2024

OVERVIEW

On May 13-14, 2024, representatives of the Webequie Supply Road (WSR) Project Team visited Webequie First Nation to provide an update about the Project and to talk to community members and request feedback on the draft socio-economic and health baseline study reports that were circulated to the community leadership. The Project Team also heard from community members about concerns and issues related to potential effects of the WSR Project on the community.

The Project Team hosted community meals and discussions at the Webequie Band Hall over two days, where presentations by technical specialists were followed by Q & A sessions on the following topic areas:

- General update on the WSR Project with presenters Jennifer Ashawasegai-Pereira (AtkinsRéalis) and Samson Jacob (Webequie First Nation);
- Socio-economic existing conditions of Webequie First Nation with presenter Mark Knell (AtkinsRéalis); and
- Community health existing conditions of Webequie First Nation with presenter Faiza Waheed (Intrinsik).

Additionally, breakout focus groups were held with participating community members to discuss in further detail the results with the community, including:

- Women and land users focus group; and
- Men and land users focus group.

Other focus groups were advertised for youth, two-spirit people but there were no attendees that participated. An Elders and individuals with disabilities focus group after the agenda was modified to allow for more open dialogue with all attendees in the community meeting.

Two Elders provided an opening prayer and pipe ceremony. One of the Elders reinforced spirituality by talking about the significance of the pipe and what it stands for. Loyalty, kindness and strength – the woven braid of the sweetgrass is together strength (the three braids individually for loyalty, kindness, honesty).

About 20 people attended the sessions each day to hear updates and participate in focus groups.

The Project Team is grateful for the ongoing participation of community members for providing essential input and direction to informing the environmental assessment/impact assessment process for the WSR Project.

ISSUES AND CONCERNS

Issues, concerns and comments raised by Community members, as well as discussion, responses and outcomes, are summarized below:

Project Update

- Engagement materials
  - You need to improve communications for project updates by providing more pictures, and other ways people will understand because many in community are visual learners.
  - Need more focused community specific studies, more visuals for presentations, better approach to these community meetings, open-house style where people can walk around and look at project posters (ex. Bringing in biologist to link traditional IK and western science – habitats).
  - Study areas, specific concerns, where a crossing occurs what are the impacts? Indigenous knowledge – streams, crossings, cumulative impacts in these areas are a major concern to community members.
  - Is community membership driving these studies? Better community engagement.
  - For future presentations, bigger lunch, bring KFC, don't recycle information.
  - Consultation should be there's a budget for lunch, travel, translators, Elders. We need to do more, we need to do better.
  - Broadcast each meeting so everyone can listen in, older people the cold bothers them and they're unlikely to join but could listen in if it was broadcasted.

- Valued components
  - Comment: What does habitat mean?
    - Response: For example, the areas where sturgeon like to live.

- Community decision making
  - Where is the community's involvement in the decision making? Who is going to make that decision? What does it look like? How does the community get involved? A vote?
  - Show capacity and ability as a community to take on that project, generate revenue from said project, can benefit the community.

- EA/IA process
  - Talked about how the EA/IA process for this project would occur at the government level and decision-making – who makes it, the changes from the SCC decision.

- Control mechanism for Control and Access system put in place in agreement with Ontario or Canada for ex. The WSR.

Socio-Economic Existing Conditions

- Baseline methods
  - A community member wondered where the baseline was starting: pre-contact or pre-colonialism.

- Housing, Services and Infrastructure
  - Some of the members expressed their experiences and concerns about housing shortages. Growing families are having a hard time accommodating their living arrangements due to smaller spaces and other factors.
  - Need for critical infrastructure, need a new school.
  - 500 homes that are prepped for the ring of fire development.
  - Health infrastructure needs to desperately improve.
  - Chief and council needs proper funding.
  - Must be implemented before Ring of Fire project commences.
  - Lack of services in the community.
  - Not being recognized or supported by government.
  - Education is deteriorating, we need a college/university in the community at home instead of sending our kids away.
  - All these things need to be put in place prior to development so we aren't catching up after the fact.
  - If it's not working, can put the road off until all these things are in place first.
  - Only two people work for housing, complaining about the noise, causes mental health issues for the community, so there's not enough people currently working for housing. And then there's a lot of noise and the community members were saying that the excessive noise is affecting mental health.
  - They're looking for a new potential place for the dump.
  - There's an issue of lack of space in the community.
  - Mitigation measure to relieve stressors could include looking at a more spread out community and infrastructure, but the feds are squeezing us into a little compressed community only because they are trying to save money as much as possible and that does not address community well-being.

- Cost of Living
  - Residents stated that the cost of living is high; gas prices, and inability to purchase healthy food are an increasing issue. There is also an issue with limited variety. With only a single store there aren't any facets for competitive pricing or options for community essentials.
  - Safety, well-being of our community, don't have wood to heat our homes.
  - The Northern store is too expensive. Need higher incomes. Junk food is cheaper. Some prefer fast food over traditional food.

- Employment
  - Lack of employment was a concern stated several times during the focus group. Some of the residents stated that they would like to see an increase in jobs related to information technology engineering and mechanics.
  - Cannot miss these things or ignore them, funding is needed now.
  - Need new job openings.
  - Promote jobs in the community, not halfway across the country.

- Community Safety
  - Winter road season presents instability in community due to alcohol and drugs. WSR will exacerbate this.
  - What would the mitigation measures be? Treatment centers are needed.
  - There's no crisis centre.
    No permanent doctor; doctor only comes every so often.

- Mitigation measures
  - What are the social problems, and what are the mitigation measures? How is the government going to be committed to? The community will always be left to struggle, historically speaking the government is not true to their word. What's in it for the community?

- Indigenous knowledge and way of life
  - Historically used to harvest ice to build ice huts to preserve food.
  - Use sawdust to preserve the ice and prior to that used moss.
  - Tools and IK and how they survive and sustain themselves here in the Weenusk River area, lots of skilled people who used to do these things. The elders have passed on the knowledge, those things should be written down to preserve way of life and culture.

Health Existing Conditions

- Health survey
  - Community member asked why asthma isn't included in our common health conditions? Based on community health survey where only ~40 people filled out the survey. An elder feels that illnesses in the community are due to design gaps in the infrastructure, poor air quality. He has had these conditions since year 2000 and have not improved.
  - Since 1993, been having arthritis problems and nursing station tells her that's fine and there's nothing to do; although its been years, so either there's something wrong with the diagnosis or is not receiving proper and consistent treatment.
  - Need to do more in terms of gathering data (close to 1200 members, only 40 surveys filled out), maybe use a translator to play a part in that. Try something different to encourage more surveys.
  - Was the survey available in a different language? Did the school administer it?

- Non-traditional Healthcare Systems and access to health services
  - Some of the participants expressed their dissatisfaction with the current health system. Residents noted that they don't have regular access to doctors. It was also stated that the system is just enough to sustain itself, but is not inclusive enough to include traditional methods, research, and medicines.
  - It was noted that a large percentage of Webequie residents (67% of residents) believe the road will increase access to dental care.
  - Shouldn't allow any development in our territory without a full review and a place for our wellbeing where everything has been reconciled, the damages repaired, correct the treaties.
  - Government, policeman, Christians, told them to cut their hair short.
  - If this health study is not going to do anything, then there won't be any mining or development in our backyard, until we live in a better environment for our children.
  - So they need to educate the consultants who they've hired, studies after studies, numerous pages, we have to do more.
  - Whether reconciliation will actually happen or if it's just pen and paper and talk.
  - Don't have proper spaces – nursing stations, school, airport, band office, admin buildings. Been asking the government for expansion like a new admin building, every time a proposal is submitted it goes 'under review', and to figure out finances.
  - Bureaucratic bs still happening today.
  - Community not given an opportunity to bring back their own healing system, traditional medicine, settlers don't allow that. Claims there's no money and yet universities across the country get millions of dollars a year.
  - A lot of work ahead of us.
  - Question asked – how healthcare is accessed differently in Toronto compared to Webequie.
  - Question about validation of the information from the health survey when only 40 people have taken the survey? Should there be a higher target for # of responses?

- Cost of living and availability of healthy food options
  - Elders of the community commented on their experiences struggling to adopt a healthy diet prescribed to them by their doctor due to high cost of living.
  - Participants noted that diabetes is a prominent issue in the community.
  - Type 2 diabetes and high blood pressure are rising this year (.
  - The Northern store is too expensive, need higher incomes, junk food is cheaper. Some prefer fast food over traditional food.
  - When the airport was built, promises were made that better access would be a benefit since everything could be flown in. Concerned that same thing will happen with the road. Series of broken promises from the government after the airstrip was built.

- Declining Population
  - Participants of the focus group noted that they are experiencing a decline in population. Couples are having fewer children than previous generations some of the reasons they noted were due to illnesses and high cost of living.

General Discussion

- Previous airport project and cost of living
  - When the airport was built, promises were made that better access would be a benefit since everything could be flown in. Concerned that same thing will happen with the road. Series of broken promises from the government after the airstrip was built.
  - WSR project program, wants to see someone independent to review the work, to see if its enough or overdoing it.

- Infrastructure
  - More funding needed for well-being like picnic grounds, renovations, housing, docks. If funding isn't received, might as well push off the project for decades.

- Cost of living
  - What are the benefits from the road to the Ring of Fire area (would need the rest of the connection, NRL, to bring prices down, to bring services that are so desperately needed that have been mentioned through the community presentation, otherwise the benefits aren't obvious).

- Environment
  - What are the impacts of the road? There's a lot of peat, not easily replaced, impacts to peat system will have impacts to the ecological environment and water systems.

- Income, employment and well-being
  - Having to rely on the welfare system, each individual has their own set of unique problems.

- Health, diet and cost of living
  - New and emerging illnesses observed over the years.
  - Cannot meet doctors recommendations for their required diets to fight said illnesses because the price of food is so high, only one store (Northern store) with prices increasing monthly, a fixed income that is not sufficient, probably similar for those on welfare.
  - Due to remoteness of community, expenses of the freight.

- Engagement events with health activities
  - Yoga instructor or dietician brought in as part of the meeting sessions, that allows community members to do their exercises during short breaks. Could have a protocol for this.

- Mental health and physical health connections
  - A vicious circle trying to achieve well-being, raised stress levels.

ITEMS FOR FOLLOW-UP

Below are items for follow-up from the sessions.

1. Project Team to develop plain language presentations, with illustrations or images to enhance understanding.
2. Re-work the population trajectory.

NEXT STEPS

Intrinsink and AtkinsRéalis will adjust the noted projections based on comments received during the focus group studies.

AtkinsRéalis will develop plain language presentations and display materials.

June 3, 2024

Dear Chief Wabasse,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps.

We will be offering a community information session, via Zoom, on **Monday, June 17th from 11:00-11:45am EST** for Webequie First Nation, where there will be a second presentation on the WSR Project activities for Consultation Round 3. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/81354956812?pwd=UlJL158ZbvtSJwOk09hQDiDUqblELi.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID:** 813 5495 6812 **Passcode:** 698978

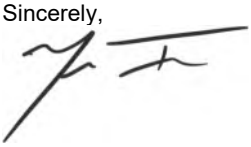
In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/meetings/

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, AtkinsRéalis
Craig Wallace, Project Manager, AtkinsRéalis

WEBEQUIE SUPPLY ROAD
INDIGENOUS KNOWLEDGE VALIDATION INTERVIEWS
& COMMUNITY INFORMATION SESSION

Webequie First Nation
August 20-22, 2024

OVERVIEW

The Webequie Supply Road Project Team including AtkinsRéalis, ICE, Stantec and ASI held IK Validation Interviews and Community Information Sessions in the Webequie First Nation Community Hall on August 20, 21 and 22, 2024. The purpose of this meeting was to share information on the Webequie Supply Road Project, validate the IK data that has already been collected and collect additional GBA+ information.

The sessions were attended by numerous community members, with sign-in sheets for each day. Focus groups consisted of Elders, Women, and Men and individual interviews also took place.

Fred Jacob was the translator for the sessions. TheyMedia recorded, streamed, and provided translation devices for the sessions.

Large, laminated maps were printed and available as tabletop tools for referencing.

Google Earth was also used as a tool to identify locations.

Communication materials were provided at the sessions and left at the Community Hall. Communication material included: 20 hard copies of WSR Newsletter Issue 36 in English and Syllabics along with 20 Hard copies of the WSR IK Validation presentation in English and Syllabics.

There was meant to be a community event to take place on the evening of August 21 for the youth, but it was cancelled by the facilitator due to other events taking place in Treaty 9 during that time. TheyMedia screened “Bridges to the North” Documentary in the community hall and served popcorn and drinks with two youth in attendance.

IK VALIDATION FOCUS GROUPS AND INDIVIDUAL INTERVIEWS

Introduction and Community Meeting Day 1

Elder (Cameron Shewaybick) welcomed the first day with a traditional and religious prayer. Micheal Fox (ICE) introduced the project teams, provided background on the project, explained the intention of the visit, and gave an overview of how the days would go. Colin Buchanan (Stantec) provided a presentation explaining the data on the maps being used for interviews. Hard copies of WSR Newsletter Issue 36 and the WSR IK Validation presentation were available in English and Syllabics for community members. 18 people signed in on Day 1.

Elder Focus Group Day 1

5 participants

Introduction and Community Meeting Day 2

15 people signed in on Day 2. Breakfast was provided. Hard copies of WSR Newsletter Issue 36 and the WSR IK Validation presentation were available in English and Syllabics for community members.

Elder Focus Group Day 2

2-4 participants

Men Focus Group Day 2

7 participants

Women Focus Group Day 2

7 participants

Community Meeting Evening Event Day 2

3 participants [1 Adult and 2 Youth] attended the showing of the 'Bridges to the North' documentary, along with Project Team.

Introduction and Community Meeting Day 3

12 people signed in on Day 3. Breakfast was provided. Hard copies of WSR Newsletter Issue 36 and the WSR IK Validation presentation were available in English and Syllabics for community members.

Women's Focus Group Day 3

6 participants

Individual Interviews

A total of 6 interviews were conducted with individual community members over the 3 days.

COMMUNITY MEETING

Breakfasts and lunches were provided. Hard copies of WSR Newsletter Issue 36 and the WSR IK Validation presentation were available in English and Syllabics for community members with copies left at the community hall.

Large, laminated WSR information posters were left in the community hall for community member perusal.

The translation was provided by Fred Jacob.

ISSUES AND CONCERNS

The following points are issues and concerns raised in the IK Validation Focus Groups and Individual Interviews.

Community Participation and Availability

- It was expressed that there were events happening in other communities in the region, and that many Webequie community members were traveling to attend events in other communities.
- It was suggested that Project Teams return in November as that is when most of the community members will be home in the community.

Traplines

- Participants expressed that certain families use certain trap lines for hunting and harvesting, and that project teams should speak to each family who uses a trapline to gain their site specific, and land use information.

- Families and members who use traplines will have specific information regarding the land that they use; they will know where burial sites, birth sites, and ceremonial sites are.

Environmental Concerns

- Concerns about dust from the road and polluting food sources, medicines and waterways.
- Concerns that activities on Webequie lands could impact water ways and pollute other communities down stream.

Social issues

- Participants expressed concerns that new social issues could arise from the road being built, and that the community is not prepared to handle more social issues.
- It was suggested that the camps for construction workers should always be dry and clean (drug and alcohol free).

Monitoring

- It was suggested that a traditional or cultural monitor be present on the lands with all project teams (i.e. Environmental Data Collection, Construction)
- Concerns about mercury levels in fish, and suggestions made for future monitoring of fish health.

IK Validation and GBA+ Data

Many sites were validated by participants.

New sites were identified, and new land use information was gathered.

New Gender Bases Analysis Plus information was captured.

NEXT STEPS

- Project Team to reach out to 2 spirited members to gather GBA+ information.

WEBEQUIE SUPPLY ROAD
Indigenous Knowledge Validation Session

Webequie First Nation
Thursday, September 12, 2024

OVERVIEW

On Thursday, September 12, 2024, Marian Tibor-McMahon and McKenna Baxter of Indigenous and Community Engagement (ICE), Colin Buchanan and Elizabeth Boyd of Stantec, and the Webequie Supply Road (WSR) Project Team hosted an Indigenous Knowledge validation session for Webequie First Nation Elders in Thunder Bay at the Superior Inn Hotel. The session was led by Stantec who provided participants with consent forms and the purpose of the session. Fred Jacob was in attendance and provided translation. The team spoke with participants in one-on-one sessions and as a group. Print out copies of maps were provided on the tables for participants to review. In total, there were 8 Elders in attendance.

Webequie Supply Road Project
Fall Geotechnical Drilling Program – Field Notice

What's happening?

AtkinsRéalis is proposing to complete drilling programs for the Webequie Supply Road (WSR) project to further engineering design and support the coordinated provincial and federal Environmental Impact Assessment. This letter is intended to provide notice as required by Land Use Permits pending issuance by the Ministry of Natural Resources (MNR). All works will be conducted in accordance with the permit conditions issued by MNR.

A borehole drilling program is planned to occur using a number of different methods of drilling depending on the terrain type and will include a multipurpose helicopter transportable drill, a Talon drill, and/or a ConeTec drill.

Helipad and drill pads will be cleared by a tree cutting team that will precede the drilling teams to ensure safe landing of the helicopters and drill equipment.

There are 50 boreholes proposed, including 37 sites intended for Talon Drilling, 18 ConeTec locations, and 13 sites completed by conventional drilling. The locations proposed for drilling are presented in the attached map.

Schedule

Work is expected to begin in late September 2024 and will continue until approximately mid-November 2024, depending on weather conditions.

What to expect

Field crews will be accessing sites across the study area by helicopter—you may see helicopters in the area carrying personnel and equipment. Crews may need to clear brush and trees from helipad sites to allow helicopter access, which could require the use of chainsaws.

Helicopters may be flying into the Webequie and Ogoki Post airports for refueling and staging purposes.

Re: Early Circulation of Draft Environmental Assessment Report / Impact Statement
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Wabasse,

We hope that this finds you and your community well.

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR, or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities. We are using a coordinated approach to ensure all federal and provincial requirements are met and will formally submit/release the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

Today, we are writing to advise you that we are planning an early circulation of the draft EAR/IS to provide the opportunity for your community to review the draft EAR/IS prior to its release to stakeholders and the public for formal review. Early circulation of the draft EAR/IS is a discretionary step in the EA/IA process which the Webequie Project Team is offering to hear your community's views and help us better understand any concerns to address when finalizing the document. At this time, we envision the early circulation of the draft EAR/IS to communities will occur in late fall or early winter of this fiscal year 2024/2025. This will provide communities an extended review period of 60-days to provide their review and comments. Following the circulation of the draft EAR/IS to Indigenous communities, the draft EAR/IS will be circulated formally to the public and stakeholders for 60-day review. This would provide an additional 60 days for Indigenous communities to review the draft EAR/IS, for a total review period of 120 days. Once a final EAR/IS is submitted to the provincial and federal governments for review and a decision, there will be an additional opportunity for Indigenous communities to provide comments during the provincial and the federal 49-day public review period.

We will follow-up with you as we move closer to the circulation of the draft EAR/IS, including how you would like to receive the document (electronic and/or hard copy).

Should you have any questions, please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project Team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Webequie, ON P0T 3A0

Re: Round 3 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Wabasse:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR or the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report 3 (electronic and hard copy), which summarizes and documents Round 3 of the Engagement and Consultation Program with your community for your review and comments.

The Consultation Progress Report 3 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Reports 1 and 2 for Consultation Rounds 1 and 2 were provided to Indigenous communities and the MECP in October 2022 and January 2024, respectively. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 3 provides an overview of engagement activities in Consultation Round 3, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 3 of the Engagement and Consultation Program occurred from April 2024 to September 2024. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 2;

- Summary of preliminary effects assessment for select valued components, including cumulative effects;
- Incorporation of IKLRU information into EA/IA;
- Proposed mitigation, and follow-up monitoring program; and
- Next steps in EA/IA process.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report 3, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Next steps in the engagement and consultation program for the Project will involve various engagement and consultation options for communities to review assessment findings in the draft Environmental Assessment Report / Impact Statement (EAR/IS), including targeted sessions with Indigenous communities for feedback and input on the results of the cumulative effects assessment for the Project. Future engagement and consultation sessions for communities are tentatively scheduled to start in Winter of fiscal year 2024/2025 and will coincide with the release of the draft EAR/IS for review and comments. The outcomes from future engagement and consultation activities planned will be used by the Project Team to help inform in the development of the Final EAR/IS that will be submitted to provincial and federal regulators and circulated to all Indigenous communities for review and comments.

We welcome any feedback and input your community may have on the attached Consultation Progress Report 3, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report 3, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

November 5, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Assessment on Effects on Geology, Terrain and Soils.**

The livestreaming event is scheduled for **November 12th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, AtkinsRéalis
Craig Wallace, Project Manager, AtkinsRéalis

November 13, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series
The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Assessment on Effects on Surface Water Resources.**

The livestreaming event is scheduled for **November 18th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or you can email mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Community Virtual Information Sessions for Round 4
The WSR Project Team will be starting virtual information sessions for each community for Consultation Round 4. These are one-on-one sessions where the Project Team shares information about the cumulative effects assessment. The session consists of a presentation on the WSR approach to assessing cumulative effects, followed by a question-and-answer period. The WSR Project team also has a platform to allow for real-time translation to accommodate community members during the session.

You can visit www.supplyroad.ca/sessions/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Engagement Opportunities
As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Craig Wallace, Project Manager, AtkinsRéalis

November 18, 2024

Dear Chief Wabasse,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share information about the cumulative effects assessment (CEA).

We will be offering a community information session, via Zoom, on Monday, November 25th from 11:00-11:45 AM EST for Webequie First Nation, where there will be a presentation on the on the topic of the CEA for the Project as part of the engagement activities for Consultation Round 4. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows:
https://us06web.zoom.us/j/84282556848?pwd=wSatyxKzN8Y8ZmGyqGdxu0sjMG4trR.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-722-4300. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685.

To help create awareness, facilitate postings, and increase participation for the community information session, the Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. The Project Team is offering opportunities for engagement related to cumulative effects assessment in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the CEA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the CEA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the CEA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

Method	Description
	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the CEA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the CEA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the CEA process with a local translator that the Project team will pay for to explain the CEA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the CEA.

You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Craig Wallace, Project Manager, AtkinsRéalis

WEBEQUIE SUPPLY ROAD PROJECT

Webequie First Nation Newsletter
Issue 15 – Dec 2024

Greetings!

The Webequie Supply Road (WSR) Project Team would like to provide the Webequie First Nation (WFN) community with an update on the WSR project, focusing on the upcoming Project update in Thunder Bay, the Cumulative Effects Assessment engagement, early circulation of the draft Environmental Assessment Report / Impact Statement, and the upcoming Three Road Projects Gathering.

Since the Terms of Reference (ToR) was approved on October 8, 2021, the Project has entered the Environmental Assessment / Impact Assessment (EA / IA) phase, which will result in a single report addressing the requirements of both the federal IA and provincial EA.

Throughout the EA / IA phase, the Project Team conducts studies to gather information on a wide range of topics and consults with Indigenous communities, members of the public, and stakeholders, to evaluate the Project and its potential effects.

Upcoming Project Update – December 2023

The Webequie Supply Road (WSR) Project Team will be hosting an information session and Christmas dinner for Webequie First Nation off-reserve members. The event will be held on December 10th from 6:00-9:00PM at the Superior Inn Hotel & Conference Center - Embassy Room in Thunder Bay. The team looks forward to seeing you there!

Cumulative Effects Assessment (CEA) Engagement

In the upcoming months, the Project team will be engaging with Webequie First Nation on the Cumulative Effects Assessment (CEA). Our engagement efforts will be focused on sharing the activities for the CEA.

Three Road Projects Gathering – February 2025

The Three Road Projects Gathering is scheduled for late February 2025. The WSR, Northern Road Link, and Marten Falls First Nation Access Road Projects will be hosting the event. The Project team will be providing an update on the WSR Project and talking about the Draft Environmental Assessment. More details will be provided in the New Year.

Early Circulation of the Draft Environmental Assessment Report / Impact Statement

The early notification letter regarding the early circulation of the Draft Environmental Assessment Report / Impact Statement (EAR/IS) was sent to communities on September 20, 2024. Our team will engage with WFN to review the Draft EAR/IS. We will also plan various activities to seek feedback on the EAR/IS in the upcoming months.

Happy Holidays!

The Project team would like to wish your community a happy and safe holiday season.

Stay Tuned!

Stay tuned for our next Project update. For additional information on the project, please visit our project website at: www.supplyroad.ca or by contacting:

WEBEQUIE SUPPLY ROAD
Christmas Party Community presentation
Webequie First Nation
December 10th , 2024

OVERVIEW

The Webequie Supply Road Project Team attended an off-Reserve Webequie community Christmas party in Thunder Bay ON December 9th, 2024, to share a project update regarding the Webequie Supply Road (WSR) at the Superior inn located in Thunder Bay ON.

The WSR Christmas party format of this event was included by and opening remark by a Webequie community member, following a project updated by AtkinsRealis team member Don Parkinson. Webequie member Fred Jacob provided translation in Oji-Cree.

Door prize draws were held towards the end of the evening.

A draw for door prizes was conducted at the end of the evening.

Approximately 75 community members were in attendance upon sign in.

QUESTIONS FROM COMMUNITY MEMBERS

There was no question period for community input.

FEEDBACK FROM COMMUNITY MEMBERS

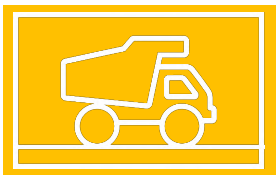
Overall Webequie members were very much appreciative of the wonderful evening and the food. Laughs and smiles were shared throughout the evening.

Issues AND CONCERNS

No issues or concerns to report at this time.

WSR Environmental / Impact Assessment Project Update
Webequie First Nation
December 10, 2024

PURPOSE OF THE WEBEQUIE SUPPLY ROAD

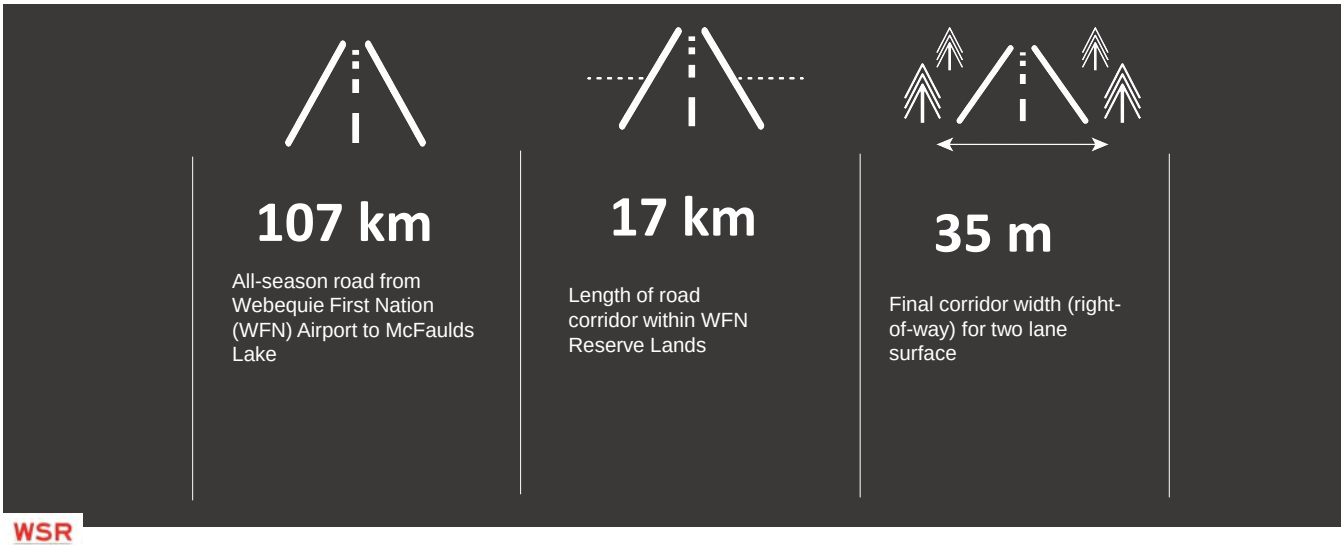


Move materials, supplies and people from the Webequie Airport to the McFaulds Lake area

Provide local employment and economic development opportunities to Webequie.

Provide experience/training opportunities for youth to help encourage the pursuit of additional skills through post-secondary education

PROJECT DESCRIPTION



PROJECT DESCRIPTION

6

Major waterbody crossings with bridges (and 25 other waterbody crossings) requiring culverts

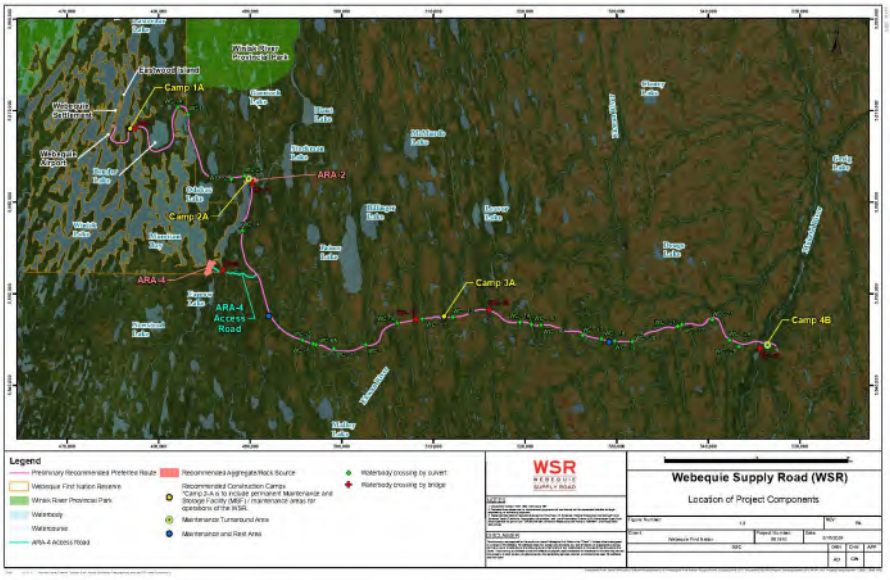
Includes temporary and permanent aggregate pit/rock quarry areas with equipment for processing, as well as access roads to these areas

4

Construction camps (temporary) to accommodate construction crews, with 1 site being repurposed to act as permanent operation/ maintenance facility

Storage and laydown yards (temporary) for equipment and materials

WSR PREFERRED CORRIDOR SHOWING CAMP AND PIT/QUARRY LOCATIONS



OTHER ROAD PROJECTS IN THE AREA

HOW IS THE WSR EA/IA RELATED TO THE FEDERAL REGIONAL ASSESSMENT?

In November 2020, the Minister of Environment and Climate Change mandated this assessment to guide sustainable development and informed decision-making. The process involves collaboration with Indigenous communities, stakeholders, and the public to ensure that diverse perspectives are considered.

Regional Assessment is a planning tool used to assess the positive and negative effects of multiple existing and future developments and activities in a specific geographic region.

A draft Terms of Reference for the assessment was released in September 2024, outlining the framework and objectives of the evaluation. This document is available for public review and comment, emphasizing transparency and community involvement.

Currently, there are over 200 comments on the draft Terms of Reference from the public, governments, and Indigenous communities, which can be seen on the IAAC website.

The WSR EA/IA final report will inform the Regional Assessment.

ENGAGEMENT & CONSULTATION

During Consultation Round 1 (2022), Round 2 (2023) and Round 3 (2024), the following engagement/consultation activities occurred:

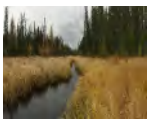
WHERE ARE WE NOW IN THE PROJECT?

- We are now getting ready to release the Draft Environmental Assessment Report / Impact Statement
- This will be provided to Indigenous communities first in January/February 2025, then the general public
- This report will identify and discuss the potential effects of the Project on various valued components

LOOKING AT PROJECT EFFECTS - WHAT DO WE THINK ABOUT?



The Surface Water (lakes, rivers)

Fish and Fish Habitat (where the fish live)

The Land- Soils and Terrain

The Plants and Wetlands

The Groundwater / Springwater

Wildlife and Terrestrial (out of water) Habitat

The Air

Species at Risk

LOOKING AT PROJECT EFFECTS - WHAT DO WE THINK ABOUT?

The People (the Social Environment)

The Environment that We See (Visual Environment)

The Economy

Aboriginal and/or Treaty Rights and Interests

The Lands and Resources

Culture

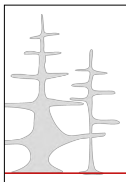
The Health of Community Members

The Effects of All Projects (Past, Present and Future) Together

LOOKING AT PROJECT EFFECTS- WHAT DO WE THINK ABOUT?

Accidents and Things that Go Wrong

Climate Change



DISCUSSING THE DRAFT ENVIRONMENT ASSESSMENT REPORT / IMPACT STATEMENT WITH YOU

When we meet with you to talk about the results of the environmental / impact assessment in January / February 2025, we want to talk about what you want to talk about. We want to know which of these types of project effects are most important to you so we can focus on the information you want to see when we visit you again.

The Surface Water (lakes, rivers)

The Land- Soils and Terrain

The Groundwater / Springwater

The Air

Fish and Fish Habitat (where the fish live)

The Lands and Resources

The Plants and Wetlands

Wildlife and Terrestrial (out of water) Habitat

Species at Risk

The People (the Social Environment)

The Economy

The Health of Community Members

The Environment that We See (Visual Environment)

Aboriginal and Treaty Rights and Interests

Culture

The Effects of All Projects (Past, Present and Future) Together

Accidents and Things that Go Wrong

Climate Change

THE DECISION-MAKING PROCESS

For Government:

Ontario:

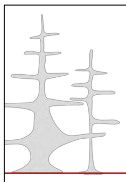
The Ministry (MECP) reviews the Environmental Assessment Report, considering comments from the public, the Government Review Team and Indigenous communities. A recommendation is prepared for the Minister to assist in deciding to: (1) approve; (2) approve the Project with conditions; or (3) refuse to approve the Project.

Canada:

The Impact Assessment Report (prepared after review of the Impact Statement) and Crown consultation informs the Minister or Governor in Council decision on whether a project's adverse impacts are in the public interest. If yes, the Minister must establish conditions for the proponent.

For Webequie:

Internal discussions about topics such as: project effects, how these effects can be controlled and the opportunities the Project will offer the community.

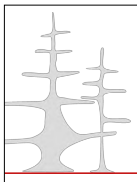


WHAT HAPPENS AFTER ENVIRONMENT / IMPACT ASSESSMENT APPROVAL?

- Environmental assessment / Impact Assessment approval means the project can go ahead, but there are many more permits that must be obtained to build the project- these permits could be for developing a pit or quarry, working in or near a lake or river to build a bridge and many other project activities
- Beyond the permits required after the project is approved, there is monitoring of the project that must be done by the project proponent (Webequie First Nation)- the EA/IA proponent develops a monitoring plan during the environmental / impact assessment
- During construction and operation of the road there is monitoring that goes on to make sure the road is being built according to the commitments or promises made in the environmental or impact assessment and conditions that the provincial and federal governments require to be met as part of their approval

WHAT HAPPENS AFTER ENVIRONMENT / IMPACT ASSESSMENT APPROVAL (CONT'D)?

- There are two types of monitoring that is done: compliance monitoring and effects monitoring
  - **Compliance monitoring** looks at whether the Project is being built and/or operated according to the commitments made during the environmental/impact assessment process and conditions of the federal and provincial project approvals
  - **Effects monitoring** is done to check the effectiveness of the predictions of projects effects and to make sure the mitigation measures are effective at eliminating or reducing project effects



TIMELINES / SCHEDULE

FALL/WINTER 2024

- **January 2025**- Early circulation of Draft Environmental Assessment Report / Impact Statement (EAR/IS) for 60-day review by Indigenous communities- ***Plain language version will be provided***
- *We will visit to explain the results of the environmental/ impact assessment*

WINTER 24/25-SUMMER 2025

- Submission of Draft and Final EAR/IS for review by the public, stakeholders and Indigenous communities

2026

- Federal / Provincial decisions on Impact Assessment / Environmental Assessment

December 16, 2024

Chief Cornelius Wabasse
Webequie First Nation
P.O. Box 268
Webequie, ON
P0T 3A0

Dear Chief Wabasse,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 3

On November 5, 2024, the WSR Project Team sent a package via Canada Post to the above address containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, December 16, 2024, the package status indicates that a notice has been left at the mailing address on November 7, 2024.

The Consultation Progress Report 3 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Reports 1 and 2 for Consultation Rounds 1 and 2 were provided to Indigenous communities and the MECP in October 2022 and January 2024, respectively. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 3 provides an overview of engagement activities in Consultation Round 3, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 3 of the Engagement and Consultation Program occurred from April 2024 to September 2024. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 2

- Summary of preliminary effects assessment for select valued components, including cumulative effects;
- Incorporation of IKLRU information into EA/IA;
- Proposed mitigation, and follow-up monitoring program; and
- Next steps in EA/IA process.

We welcome any feedback and input your community may have on the Consultation Progress Report 3, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 4. Should your community have any questions or comments on the Consultation Progress Report 3 or would like to request the digital files via file transfer service, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or

	any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Lead

WEBEQUIE SUPPLY ROAD
Community presentation

Webequie First Nation
December 18, 2024

OVERVIEW

The Webequie Supply Road Project Team attended a community meeting in Webequie First Nation on December 18, 2024 to share a project update regarding the Webequie Supply Road (WSR).

The format of the meeting was a presentation by the Project Team followed by a question and answer period. The presentation consisted of a brief project description, followed by descriptions of the relationship between the environmental assessment (EA)/impact assessment (IA) and the federal regional assessment, consultation feedback received, , the solicitation of feedback on Valued Components (VCs) to guide the EA report and Impact Statement (IS) review consultation process, the EA Report/IS review and decision-making process, and post-EA/IA activities.. Community members then engaged in an exercise to select the top three most important VCs. All community members present participated in the exercise.

Communication materials were provided to community members for their information and reference including: a copy of the presentation, WSR Environmental/Impact Assessment Project update Webequie First Nation December 18, 2024.

A total of 35 people were in attendance, 21 community members signing in.

QUESTIONS FROM COMMUNITY MEMBERS

During the presentation, community members asked questions and clarified a few items (marked “Q”). Responses from the Project Team are noted in *italics* (marked “R”), where provided.

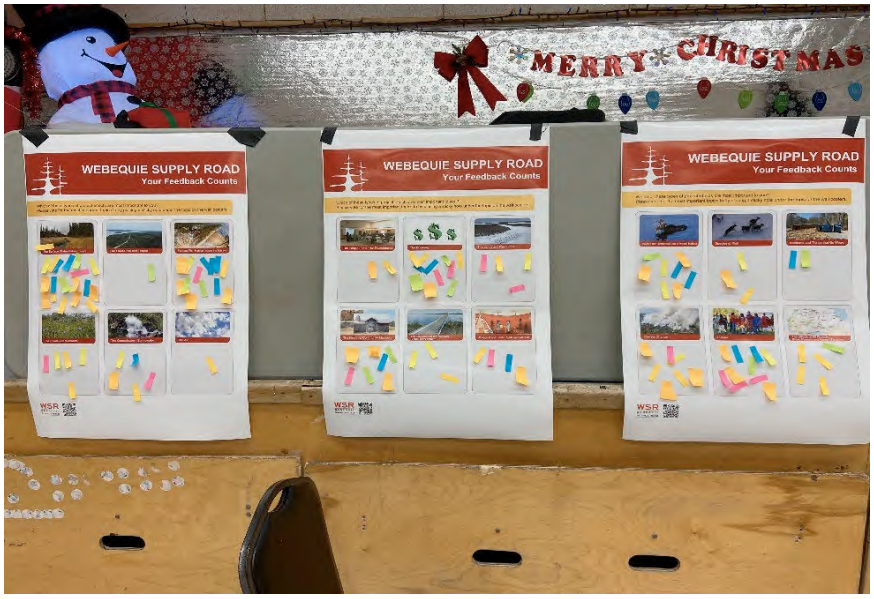
Q: How large will the camps be?

R: *Footprint will not be very large. The area will be big enough to accommodate a few trailers and a storage area. The camps locations will be restored after us; however, one site will be utilized as a permanent facility for maintenance and storage.*

FEEDBACK FROM COMMUNITY MEMBERS

Each community member was provided with three sticky notes with which to vote for the three VCs most important to them. The sticky notes were tallied, with the results as follows:

- The Surface Water (lakes, rivers) – 19
- The Land – Soils and Terrain – 1
- Fish and Fish Habitat (where fish live) – 13
- The Plants and Wetlands – 5
- The Groundwater/Springwater – 5
- The Air – 1
- The People (the Social Environment) 2 (One sticker indicated ‘population’ was important)
- The Economy – 11
- The Lands and Resources – 4
- The Health of Community Members – 7
- The Environment that We See (Visual Environment) – 3
- Aboriginal and Treaty Rights and Interests – 4
- Wildlife and Terrestrial (out of water) Habitat – 8
- Species at Risk – 3
- Accidents and Things that go Wrong – 2
- Climate Change – 7
- Culture – 10
- The Effects of All Projects (Past, Present and Future) Together – 5



ISSUES AND CONCERNS

None at this time.

ITEMS FOR FOLLOW-UP

Build draft executive summary EA/IS chapters around VCs most interested in.
Continue to provide information to community.

NEXT STEPS

Provision of Draft EA/IS document to community, accompanied by a summary version and supported by visits by the technical team to help discuss any potential effects identified.

January 17, 2025

Dear Chief Wabasse,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share information about the cumulative effects assessment (CEA).

We will be offering a community information session for Round 4 Part 2, via Zoom, on Monday, January 27th from 11:00-11:45 AM EST for Webequie First Nation, where there will be a presentation on the on the topic of the CEA for the Project as part of the engagement activities for Consultation Round 4. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/83021621734?pwd=7YI0FSaeY6L5jTYsOepvaMO3vNsB5R.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-722-4300. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685.

In addition, the Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/meetings/

To help create awareness, facilitate postings, and increase participation for the community information session, the Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hard copies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. The Project Team is offering opportunities for engagement related to cumulative effects assessment in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

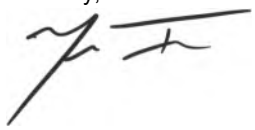
Method	Description
Focus Group Sessions	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the CEA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the CEA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the CEA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the CEA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the CEA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the CEA process with a local translator that the Project team will pay for to explain the CEA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the CEA.

You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

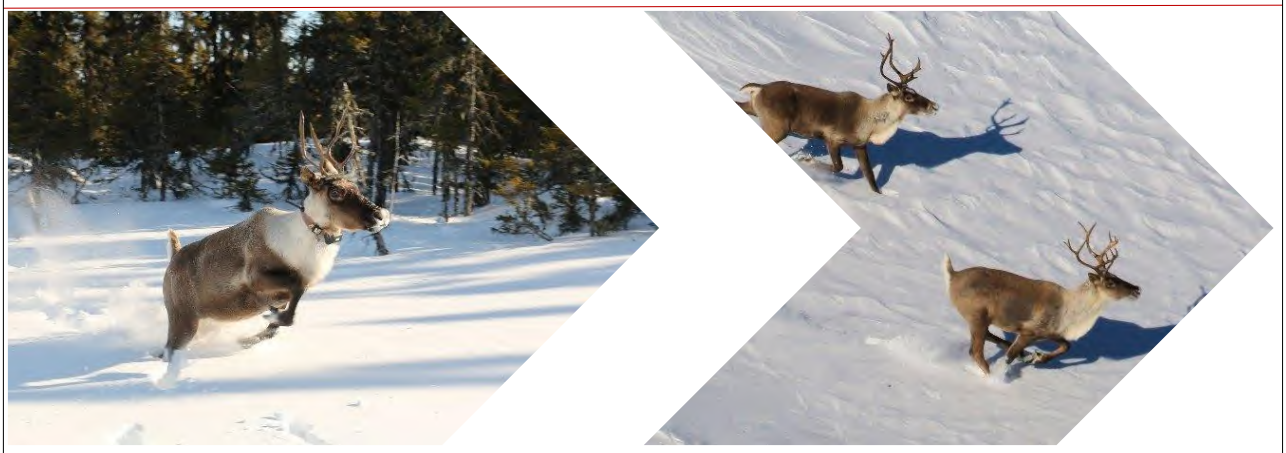
Don Parkinson, Consultation Lead, AtkinsRéalis
Craig Wallace, Project Manager, AtkinsRéalis

FIELD NOTICE

WEBEQUIE SUPPLY ROAD

JANUARY 2025



WHAT'S HAPPENING?

Field work will be continuing in the 2025 winter season to support the provincial Environmental Assessment (EA) and federal Impact Assessment (IA) for the Webequie Supply Road.

ATIKWAG/CARIBOU COLLAR REMOVAL

Field work has been scheduled to take place from February 19th to March 1st, 2025, to manually remove atikwag/caribou GPS radio tracking collars.

In 2021, radio tracking collars were placed on atikwag/caribou to gather data on their populations, migration patterns, and habitat use. Following three years of data collection, these collars were set to automatically release in February 2024, however not all collars released as intended. A specially trained team will manually remove collars without harming the animal.

WHAT TO EXPECT

Field crews will be accessing sites across the study area by helicopter so you may see helicopters in the area. An update will be provided if the above schedule changes due to weather or other conditions.

WHERE?

See the attached map of the study area. Please note that atikwag/caribou can travel very far and therefore, the field team may need to travel outside of the study area boundaries.

WSR-EA IA Project Update WFN Comm Mtg-English-2025-03-17

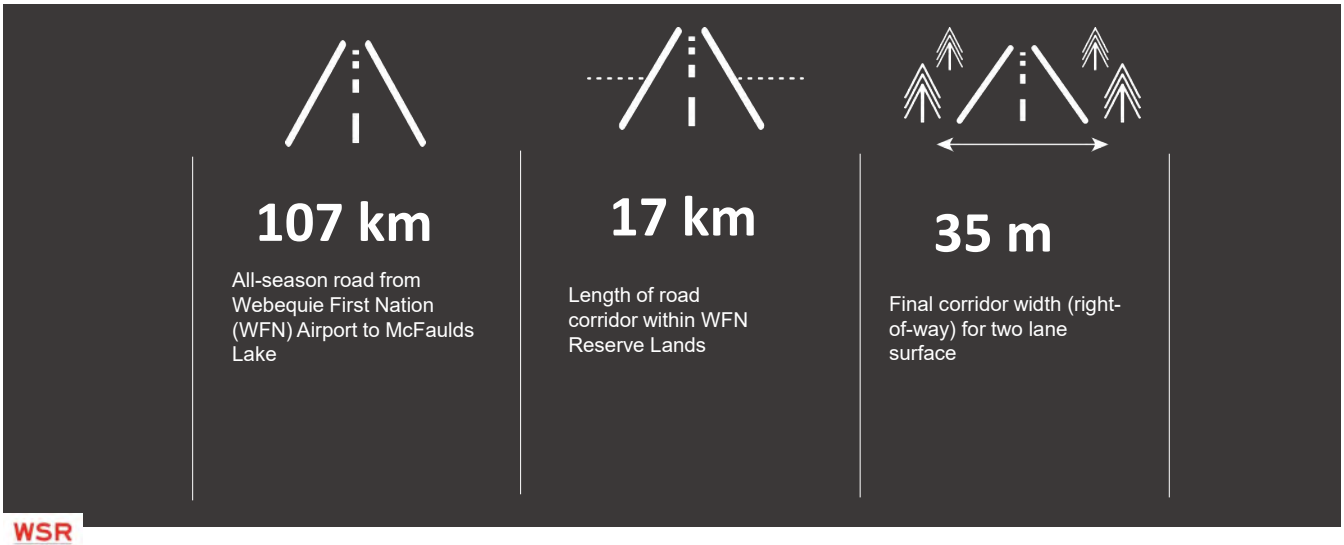
PURPOSE OF THE WEBEQUIE SUPPLY ROAD

Move materials, supplies and people from the Webequie Airport to the McFaulds Lake area

Provide local employment and economic development opportunities to Webequie.

Provide experience/training opportunities for youth to help encourage the pursuit of additional skills through post-secondary education

PROJECT DESCRIPTION



PROJECT DESCRIPTION

6

Major waterbody crossings with bridges (and 25 other waterbody crossings) requiring culverts

Includes temporary and permanent aggregate pit/rock quarry areas with equipment for processing, as well as access roads to these areas

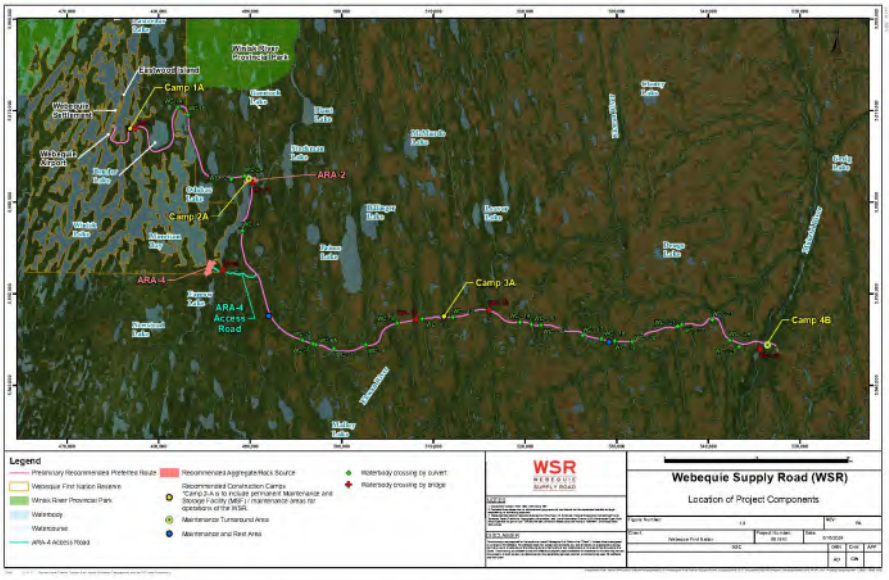
4

Construction camps (temporary) to accommodate construction crews, with 1 site being repurposed to act as permanent operation/ maintenance facility

Storage and laydown yards (temporary) for equipment and materials

WSR
WEBEQUIE SUPPLY ROAD

WSR PREFERRED CORRIDOR SHOWING CAMP AND PIT/QUARRY LOCATIONS



OTHER ROAD PROJECTS IN THE AREA

HOW IS THE WSR EA/IA RELATED TO THE FEDERAL REGIONAL ASSESSMENT OF THE RING OF FIRE ?

In November 2020, the Minister of Environment and Climate Change mandated this assessment to guide sustainable development and informed decision-making. The process involves collaboration with Indigenous communities, stakeholders, and the public to ensure that diverse perspectives are considered.

Regional Assessment is a planning tool used to assess the positive and negative effects of multiple existing and future developments and activities in a specific geographic region.

A draft Terms of Reference for the assessment was released in September 2024, outlining the framework and objectives of the evaluation. This document is available for public review and comment, emphasizing transparency and community involvement.

Currently, there are over 200 comments on the draft Terms of Reference from the public, governments, and Indigenous communities, which can be seen on the IAAC website.

The Regional Assessment is an independent and separate process from the WSR EA/IA. Information from the Regional Assessment, if available, will be used to inform the WSR EA/IA.

ENGAGEMENT & CONSULTATION

During Consultation Round 1 (2022), Round 2 (2023) and Round 3 (2024), the following engagement/consultation activities occurred:

WSR
WEBEQUIE SUPPLY ROAD

WHERE ARE WE NOW IN THE PROJECT?

- We are now getting ready to release the Draft Environmental Assessment Report / Impact Statement
- This will be provided to Indigenous communities for review first (60-days), and then released for review (60-days) by the public, stakeholders and Indigenous communities
- This report will identify and discuss the potential effects of the Project on various valued components

THE DECISION-MAKING PROCESS

For Government:

Ontario:

The Ministry (MECP) reviews the Environmental Assessment Report, taking into account comments from the public, the Government Review Team and Indigenous communities. A recommendation is prepared for the Minister to assist in deciding to: (1) approve; (2) approve the Project with conditions; or (3) refuse to approve the Project.

Canada:

The Impact Assessment Report (prepared after review of the Impact Statement) and Crown consultation informs the Minister or Governor in Council decision on whether a project's adverse impacts are in the public interest. If yes, the Minister must establish conditions for the proponent.

For Webequie:

Internal discussions about topics such as: project effects, how these effects can be controlled and the opportunities the Project will offer the community.

WHAT HAPPENS AFTER ENVIRONMENT / IMPACT ASSESSMENT APPROVAL?

- Environmental Assessment / Impact Assessment (EA / IA) approval means the project can go ahead, but there are many more permits that must be obtained to build the project. These permits could be for developing a pit or quarry, working in or near a lake or river to build a bridge and many other project activities
- Beyond the permits required after the project is approved, there is monitoring of the project that must be done by the project proponent (Webequie First Nation) that is identified in the EA/IA and also in conditions of other permits for the project.
- During construction and operation of the road there is monitoring that goes on to make sure the road is being built according to the commitments or promises made in the EA / IA and conditions that the provincial and federal governments require to be met as part of their approval

WHAT HAPPENS AFTER ENVIRONMENT / IMPACT ASSESSMENT APPROVAL (CONT'D)?

- There are two types of monitoring that is done: compliance monitoring and effects monitoring
  - **Compliance monitoring** looks at whether the Project is being built and/or operated according to the commitments made during the environmental/impact assessment process and conditions of the federal and provincial project approvals
  - **Effects monitoring** is done to check the effectiveness of the predictions of projects effects and to make sure the mitigation measures are effective at eliminating or reducing project effects

DRAFT ENVIRONMENTAL ASSESSMENT REPORT (EAR) / IMPACT STATEMENT (IS) REVIEW

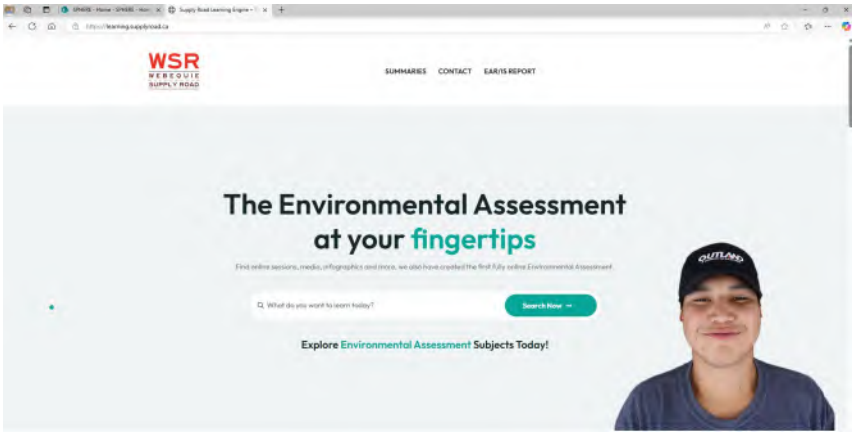
Plain Language Summary of Environmental Assessment Report / Impact Statement

- *Chapter by chapter plain language summary of full environmental assessment report*
- *Simpler descriptions of potential project effects, mitigation and net effects*
- *References back to main EA document for full details*

Environmental Assessment Report / Impact Statement

- *Main EAR / IS document*
- *Complete technical document*

DRAFT ENVIRONMENTAL ASSESSMENT REPORT (EAR) / IMPACT STATEMENT (IS) REVIEW



Learning Tools

- *Will be part of release of EAR/IS document*
- *Includes video of plain language summary of each chapter and will be translated into Cree and Nishnawbemowin*
- *Podcast-like discussion of topics in each chapter*
- *Graphics that help explain each chapter*

TIMELINES / SCHEDULE

WINTER 2025

- Early circulation of Draft Environmental Assessment Report / Impact Statement (EAR/IS) for 60-day review by Indigenous communities- ***Plain language version will be provided***
- *We will visit to explain the results of the environmental/ impact assessment*

WINTER/ SUMMER 2025

- Submission of Draft and Final EAR/IS for review by the public, stakeholders and Indigenous communities

2026

- Federal / Provincial decisions on Impact Assessment / Environmental Assessment

Webequie Supply Road Project
Spring Geotechnical Drilling Program – Field Notice

What's happening?

AtkinsRéalis is proposing to complete drilling programs for the Webequie Supply Road (WSR) project to further engineering design and support the coordinated provincial and federal Environmental Impact Assessment. This letter is intended to provide notice as required by Land Use Permits pending issuance by the Ministry of Natural Resources (MNR). All works will be conducted in accordance with the permit conditions issued by MNR.

A borehole drilling program is planned to occur using a multipurpose helicopter transportable drill.

Helipad and drill pads will be cleared by a tree cutting team that will precede the drilling teams to ensure safe landing of the helicopters and drill equipment.

The locations proposed for drilling are presented in the attached map.

Schedule

Work is expected to begin in early April 2025 and will continue until approximately early May 2025, depending on weather conditions.

What to expect

Field crews will be accessing sites across the study area by helicopter—you may see helicopters in the area carrying personnel and equipment. Crews may need to clear brush and trees from helipad sites to allow helicopter access, which could require the use of chainsaws.

Helicopters may be flying into the Webequie and Ogoki Post airports for refueling and staging purposes.

WEBEQUIE SUPPLY ROAD
MEETING WITH WEBEQUIE CHIEF AND COUNCIL

March 25, 2025

OVERVIEW

At a meeting on March 25, 2025 with Webequie First Nation Chief and Council, Don Parkinson and Michael Fox discussed the plan for engaging with Webequie community members after the release of the Draft Environmental Assessment Report/Impact Statement. Tentative plans included monthly community visits to discuss different chapters of the report, including identified project effects and associated mitigations.

WEBEQUIE SUPPLY ROAD
MEETING IN WEBEQUIE FIRST NATION
COMMUNITY INFORMATION SESSION

Webequie First Nation
May 20, 2025

OVERVIEW

The Webequie Supply Road Project Team hosted a presentation and community celebration on May 20, 2025, at the band hall in Webequie First Nation (WFN). The purpose of this meeting was to share information on the Webequie Supply Road Project and the early release of the draft Environmental Assessment Report / Impact Assessment (EAR/IS).

The informal format of the meeting included a project update by Michael Fox, ICE and the Project Team followed by a discussion about concerns. Michael presented on an overview of the alternative routes, aggregates, construction camps, Provincial & Federal & Regulatory timelines, RFPs, pre-construction activities, and a framework roadmap. TheyMedia was also present to livestream the presentation on the WSR Facebook page.

Gordon Wabasse and Roy Spence provided translation. A hard copy of the available Draft EAR/IS sections and plain language summaries (hard copy and digital via USB) in English, Cree, and Oji-Cree were available at the meeting for community members. The Project team indicated that the plain language summary translations are ongoing and will be available on the Project website as they are completed. In total, approximately 29 community members signed in.

In the evening, the WSR Project team also hosted a community feast with entertainment and door prizes.

ISSUES AND CONCERNS

After the presentation, Norman Shewaybick noted his concern about companies using the road and treating the community lands as a dump. They also noted the issue of overcrowded housing and poor infrastructure. The individual would like to see an office for the Ring of Fire (RoF) in the community, to oversee activities in the region.

Another community member noted that if WFN wants to use the road for access to the RoF, they want to see WFN in charge of their area. They noted their concern with First Nations fighting each other and the need to make an agreement with the government for future

generations. WFN wants the resources. The individual also expressed their want for the project for future generations.

NEXT STEPS

Michael explained the plan for the WSR Project team to go to WFN every month to provide an update on the draft EAR/IS.

WEBEQUIE SUPPLY ROAD
ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS (ATRI) VALIDATION
COMMUNITY TRIP

Webequie First Nation
May 21-23, 2025

OVERVIEW

Christopher McKay of Indigenous and Community Engagement (ICE), Elizabeth Boyd and Hannah Saevil of Stantec, and the Webequie Supply Road (WSR) Project Team hosted Aboriginal and Treaty Rights and Interests (ATRI) validation sessions for Webequie First Nation members at the band hall from May 21-23, 2025. The team held sessions with 6 family groups to validate findings from the ATRI report. The information was validated through the report, maps and group discussions. The team spoke with one participant one-on-one. Print copies of maps were provided on the tables for participants to review.

Re: Early Circulation of Draft Environmental Assessment Report/Impact Statement for Review
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Wabasse,

We hope that this finds you and your community well.

As you may know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR), or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (refer to attached project location key plan).

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted for the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and have prepared the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

Today, we are writing to advise you that an early circulation of the Draft EAR/IS is now available to your community for review. The Draft EAR/IS documents the evaluation of alternative routes considered for the WSR and presents the Preferred Route and location for supportive project infrastructure (e.g., construction camps, pits/quarries). It also documents the potential environmental, social, cultural and health impacts including cumulative effects, proposed mitigation measures, and engagement and consultation undertaken so far.

The draft EAR/IS is being circulated in two stages:

- Early Access for Indigenous Communities: 120-Day Review Period, June 9 to October 7, 2025
- Public and Stakeholders: 60-Day Review Period, August 8 to October 7, 2025

The two-stage approach to circulation of the Draft EAR/IS will provide your community with an extended review period to provide comments on the document, for a total of 120 days.

Enclosed is the Draft EAR/IS for the WSR Project for review. This package includes:

- One (1) hard copy of the main body of the Draft EAR/IS;

- Electronic copy (USB - digital memory stick) of EAR/IS Appendices that include draft technical reports; and
- One hard copy and electronic copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree and Cree.

The Draft EAR/IS and information on the review process is also available on the WSR Project Website: https://www.supplyroad.ca.

What is not included in Draft EAR/IS at this time is the draft Record of Consultation and Engagement with Indigenous communities, the public and stakeholders. This document will be provided to your community when the draft EAR/IS is released for public and stakeholder review (August 8, 2025). In the interim, consultation and engagement activities and feedback we received from your specific community are documented in the Consultation Progress Reports for Rounds 1, 2 and 3 previously sent to you at key milestones in the EA/IA process, and can also be found on the Project website https://www.supplyroad.ca under "**Documents**".

Members of your community are encouraged to actively participate in the review of the Draft EAR/IS. Comments and feedback can be provided via the Project Website (https://www.supplyroad.ca); Project email (wsrcomments@supplyroad.ca) or by letter mail until October 7, 2025 to the contacts below:

Re: Early Circulation of Draft Environmental Assessment Report/Impact Statement for Review
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Wabasse,

We hope that this finds you and your community well.

As you may know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR), or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (refer to attached project location key plan).

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted for the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and have prepared the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

Today, we are writing to advise you that an early circulation of the Draft EAR/IS is now available to your community for review. The Draft EAR/IS documents the evaluation of alternative routes considered for the WSR and presents the Preferred Route and location for supportive project infrastructure (e.g., construction camps, pits/quarries). It also documents the potential environmental, social, cultural and health impacts including cumulative effects, proposed mitigation measures, and engagement and consultation undertaken so far.

The draft EAR/IS is being circulated in two stages:

- Early Access for Indigenous Communities: 120-Day Review Period, June 9 to October 7, 2025
- Public and Stakeholders: 60-Day Review Period, August 8 to October 7, 2025

The two-stage approach to circulation of the Draft EAR/IS will provide your community with an extended review period to provide comments on the document, for a total of 120 days.

Enclosed is the Draft EAR/IS for the WSR Project for review. This package includes:

- One (1) hard copy of the main body of the Draft EAR/IS;

- Electronic copy (USB - digital memory stick) of EAR/IS Appendices that include draft technical reports; and
- One hard copy and electronic copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree and Cree.

The Draft EAR/IS and information on the review process is also available on the WSR Project Website: **https://www.supplyroad.ca/draftea**.

What is not included in Draft EAR/IS at this time is the draft Record of Consultation and Engagement with Indigenous communities, the public and stakeholders. This document will be provided to your community when the draft EAR/IS is released for public and stakeholder review (August 8, 2025). In the interim, consultation and engagement activities and feedback we received from your specific community are documented in the Consultation Progress Reports for Rounds 1, 2 and 3 previously sent to you at key milestones in the EA/IA process, and can also be found on the Project website https://www.supplyroad.ca under "**Documents**".

Members of your community are encouraged to actively participate in the review of the Draft EAR/IS. Comments and feedback can be provided via the Project Website (https://www.supplyroad.ca); Project email (wsrcomments@supplyroad.ca) or by letter mail until October 7, 2025 to the contacts below:

APPENDIX P2.I.2

Correspondence with Indigenous Communities and Groups – Aroland First Nation

Webequie Supply Road Project Consultation Log

Records Found: 1

Aroland First Nation — First Nation Community

Contact Date: Oct 29, 2021 16:30 Method: E-mail
Topics to be Discussed: Notice of Commencement of Environmental Assessment
Don Parkinson of SNC Lavalin Inc (SNC) emailed the Notice of Commencement of Environmental Assessment (EA) for the Webequie Supply Road (WSR) Project to all stakeholders including the public, Indigenous communities, agencies and other interested parties. The email informed the stakeholders that the Terms of Reference (ToR) with amendments for the WSR EA Study was approved by the Minister of the Environment, Conservation and Parks (MECP) on October 8th, 2021. The email also informed them that the approved ToR and Notice of Approval can be accessed on the project website. It further encouraged participation in future consultations.
Attached File: SNC-Public Notice of Commencement of EA-2021-10-21.pdf

Contact Date: Nov 03, 2021 14:00 Method: Mail
Topics to be Discussed: Community Newsletter, Terms of Reference, Environmental Assessment Process
Melanie Laforest and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team mailed a letter and 50 copies of a newsletter to Aroland First Nation's (ARFN) Chief Dorothy Towedo, advising that the WSR Project's Terms of Reference (ToR) had been approved with amendments by the Minister of the Environment, Conservation and Parks, and that the Environmental Assessment (EA) process would begin. The letter indicated that multiple copies of the newsletter were enclosed for distribution to the community. The newsletter provided information about the steps involved in the EA process, including the Notice of Commencement, Baseline Studies and Identification of Alternatives, Engagement and Consultation, and the Indigenous Knowledge Program. Michael provided a link to the WSR Project website along with himself and Don Parkinson of SNC-Lavalin's email address if ARFN has any questions or comments.

Contact Date: Nov 22, 2021 14:17 Method: Fax
Topics to be Discussed: Terms of Reference, Live stream: Caribou and Wolverine, Wildlife and Wildlife Habitat, Species at Risk and Breeding Birds
Melanie Laforest and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team faxed a letter and poster, to Aroland First Nation's (ARFN) Chief Dorothy Towedo, advising that the WSR Project Team is hosting a live stream show and Wawatay radio session on November 23, 2021 with a livestream from 4:00-4:30pm EST and Wawatay Radio call-in show from 2:00-3:00pm EST, with access links and the toll-free call-in phone number. The sessions will include a presentation on topics including: Caribou and Wolverine, Wildlife and Wildlife Habitat, Species at Risk and Breeding Birds Work Plans along with question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations, Michael's email and cell phone contact information if ARFN has any questions or comments.

Topics to be Discussed: Indigenous Knowledge / Indigenous Land and Resource Use Program
Brianna Patrick and Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an e-mail to Aroland First Nation's (ARFN) Chief Dorothy Towedo, with an attached package that included a letter, map, and Information Sharing Agreement. The letter advised that the WSR Project Team are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program and inquired whether ARFN would be interested in participating in the Program. The letter included information about the IKLRU Program purpose, phases and guiding principles. The letter noted the importance of the protection and confidentiality of information collected and used in the IKLRU Program and indicated that a draft Information Sharing Agreement was included in the package, which outlined how confidential and sensitive information would be utilized in the WSR Project's environmental assessment and design process. A map of the Preliminary Study Areas for Indigenous Peoples Land Use and Interests was also included in the package. The letter asked ARFN to confirm their interest in participating in the Program by January 27, 2022. Brianna and Michael provided their email and cell phone contact information if ARFN has any questions.

The e-mail sent on December 13, 2021 bounced back with an error indicating the e-mail was not delivered. The same e-mail was sent again on December 15, 2021 at 9:14am to an updated e-mail address for Chief Dorothy Towedo and was successfully delivered.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Marian Tibor-McMahon and Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a fax, to Aroland First Nation's (ARFN) Chief Dorothy Towedo, which included a letter and map of the WSR Socio-Economic Study Areas. The letter stated that a key component of the EA/IA process is collecting socio-economic information within the Project study area, and as a result, the WSR Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered. It included information about what information the socio-economic program will gather, what the study area is, and detailed the components of the program. The letter invited ARFN to participate in the WSR socio-economic primary data collection program. The letter asked ARFN to confirm their interest in participating in the program by February 3, 2022. Marian provided her email and cell phone contact information if ARFN has any questions.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session for Aroland First Nation (ARFN) on June 13, 2022. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, Don played a video presentation which included information on WSR's Environmental Assessment / Impact Assessment (EA / IA) activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. After the video presentation, Don discussed questions that had been previously asked by ARFN. These questions were regarding the assessment of cumulative effects. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community members. There were no community members in attendance. The Project Team informed the audience that a recording of the session is made available through YouTube and the WSR Website for viewing.

Topics to be Discussed: WSR Consultation Progress Report Round 1
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Aroland First Nation’s (ARFN) Chief Dorothy Towedo which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 1. The USB contained files supporting Record of Consultation. The letter explained that the Consultation Progress Report summarizes the documents from Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. The report being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that Webequie First Nation is tentatively planning to conduct Consultation Round 2 for the Project from Winter 2023 to Summer 2023 and provided a list of topics and milestones which are proposed to be addressed as part of the engagement and consultation activities for Round 2. Michael's email and cell phone contact information was provided if ARFN has any questions or comments.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Aroland First Nation (ARFN) on March 13, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, Don played a video presentation which included a testimony by the WFN Chief Wabasse and information on WSR's Environmental Assessment / Impact Assessment (EA / IA) activities including alternative assessment methodology and results, valued components, preferred alternative and consultation approach and next steps. After the video presentation, Don discussed concerns that had been previously raised by AFN about the cumulative effects of multiple projects. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community members. The Project Team informed the audience that a recording of the session is made available through YouTube and the WSR Website for viewing. The team also informed the audience of the upcoming radio and livestreaming events the following day. There were no community members in attendance.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Aroland First Nation (ARFN)'s Chief Dorothy Towedo, with a letter inviting the community's participation in the Socio-Economic Primary Data Collection Program as part of the WSR Environmental Assessment/Impact Assessment (EA/IA). The letter was a follow-up to the letter sent on December 20, 2021, which outlined the purpose of the socio-economic study, types of information that the Project team wants to gather, and suggested primary data collection methods. The letter explained that the Project team has a timeframe for the EA/IA process to complete the studies and document the results, and the goal for the year is to complete a Draft Socio-Economic Existing Conditions Report. The letter explained that the Project team would like to collaborate with the community to discuss and collect socio-economic information and/or verify information gathered to-date based on current research to help understand existing social and economic conditions. The letter provided an overview of the preliminary Valued Components for the EA/IA to represent aspects of social and economic conditions that are important to the community which require information gathering. The letter requested an indication of ARFN's interest in participating in the Socio-Economic Primary Data Collection Program by April 17, 2023, because it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by June 16, 2023.

The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if ARFN has any questions or comments.

The email also included the English WSR Newsletter - Issue 20 which provided information about Consultation Round 2 Topics, the Socio-Economic Primary Data Collection Program, the Indigenous Knowledge and Land Resource Use Program, and the livestream and radio schedule for March 2023. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael, Don Parkinson of SNC-Lavalin, and Leslie Spence the WSR Local Coordinator provided their email address and phone number if ARFN has any questions or comments.

16:30
Michael Fox and McKenna Baxter of ICE sent another email to the Chief with an updated letter that had the correct date.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Aroland First Nation (ARFN)’s Chief Dorothy Towedo as a follow up to the email sent on March 17, 2023 regarding the invitation to participate in the Socio-Economic Primary Data Collection Program as part of the Environmental Assessment / Impact Assessment. Heather asked the Chief if they had any questions regarding the original email and letter and indicated that the WSR Project team would like to hear back by April 17, 2023 as to ARFN’s interest in participating in the program. The letter detailed the purpose of the socio-economic study, the type of information that the WSR Project team is seeking, the study area, how information will be collected, schedule, and next steps. Heather requested the Chief to let the WSR Project team know if they prefer a call to discuss the request in the letter.

Contact Date: May 29, 2023 14:00 Method: Indigenous Community Meeting
Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Aroland First Nation (AFN) on May 29, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. The meeting began with a video of Chief Wabasse discussing the importance of the project to the Webequie Community. Don explained that the Part 2 of Consultation Round 2 will discuss the Project team’s work on the evaluation of alternatives for supportive infrastructure which includes aggregate rock sources for pits and quarry access roads and construction camps. Don presented information on how various factors were evaluated to produce preferred options based on a lower score. Don also explained the various engineering structures such as culverts, bridges, access roads etc. in detail and shared graphics illustrating what the proposed structures would look like after completion. The WSR Project Team had a platform which provided a real-time translation of the session in Oji-Cree. No participants from AFN were in attendance. Don reiterated that the Project Team would like to hear from AFN community members and that a recording of the session would be made available through YouTube and the WSR Website.

Topics to be Discussed: ATRI Forum Follow Up
Andrea Nokleby of Dillon Consulting sent an email on behalf of Marten Falls First Nation Community Access Road (MFFN CAR), Webequie Supply Road (WSR), and Northern Road Link (NRL) Project Teams to thank Chief Dorothy Towedo of Aroland First Nation (ARFN) and representatives who attended the Aboriginal and Treaty Rights (ATRI) and Forum that was hosted in Thunder Bay on February 8th and 9th 2023. Michael Fox of Indigenous and Community Engagement (ICE) and the WSR Project team were copied on the email. The Forum focused on discussing potential impacts to Northern Indigenous communities' Aboriginal and/or Treaty Rights and Interests as they relate to the MFFN CAR, WSR and NRL projects. The email contained attachments with information including: (1) a thank you note to all participants; (2) a general summary of ATRI comments; and (3) community-specific summaries from the breakout sessions. The email indicated that any comments or questions about the attached information is welcomed and that representatives on the project teams would be happy to set up additional meetings to further discuss any aspects of the projects, including ARFN's ATRI as they relate to each project. The email also indicated that each Project team would be following up separately on any project-specific correspondence.

Topics to be Discussed: Radio, Livestreams and Engagement Options
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent an email to Aroland First Nation (ARFN)'s Chief Dorothy Towedo which included a letter, and poster advising that the WSR Project Team is hosting a Wawatay radio session from 12:00pm-1:00pm EST and livestream from 2:00pm-2:30pm EST on June 6, 2023. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on the Proposed Criteria and Indicators for Evaluation of Alternatives for Supporting Infrastructure, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 Part 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if ARFN has any questions or comments.

Topics to be Discussed: Indigenous Knowledge / Land and Resource Use Program
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Dorothy Towedo of Aroland First Nation (ARFN) with an attached letter as a follow up to the correspondence sent on December 13, 2021 regarding ARFN's participation in the Indigenous Knowledge / Land Resource Use (IKLRU) Program for the WSR Project. The letter noted that the community has an active funding agreement with the Province of Ontario to participate in the IKLRU program for the WSR Project, and that the community has initiated a community-led IKLRU study for the WSR Project. The letter explained that the Project team is writing to confirm the planning timelines for the Environmental Assessment / Impact Assessment process, with the goal to finalize the baseline conditions report. The letter requested the community to let the Project team know what they are planning for the program by the end of June 2023 and indicated that the Project team would like to receive the IKLRU studies by the end of September 2023. The letter indicated that all knowledge that is shared will be safeguarded with a formal Confidentiality and Data Sharing Agreement, which will ensure all input from the community will remain the ownership of the community, and that no information will be shared beyond the Project team, without the consent of the community. The letter also indicated that as the Proponent, Webequie First Nation bears the responsibility for the Project and the assessment processes being applied to it. Michael provided his contact information and closed by wishing the community continued health and wellness.

Topics to be Discussed: Engagement Options, Virtual Information Sessions 2
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent an email to Aroland First Nation (ARFN)'s Chief Dorothy Towedo which included a letter that offered various community engagement options to help create awareness of the Project. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 Part 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if ARFN has any questions or comments.

Topics to be Discussed: Aboriginal Treaty Rights and Interests Forum Invitation
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Dorothy Towedo of Aroland First Nation (ARFN) with an attached invitation for the Aboriginal and Treaty Rights and Interests (ATRI) Forum hosted by the Province of Ontario in Thunder Bay on November 21-23, 2023. The poster explained that Webequie First Nation and Marten Falls First Nation encourage the community to participate in the follow-up Forum to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link (NRL), and Marten Falls Community Access Road (MFCAR) Projects. The poster provided more information on how community representatives can attend, the purpose of the forum, who should attend from each community, and an email address for the community to RSVP. The Province of Ontario, Michael Fox of WSR, Andrea Nokleby of MFCAR, and Mishal Neesar of NRL provided their emails for further information if ARFN has any questions or comments.

Topics to be Discussed: ARFN Response to ATRI Invitation
Andrew Peach of Shared Valued Solutions, a consultant on behalf of Aroland First Nation (ARFN) sent an email to Andrea Nokleby of Dillon Consulting and the Marten Falls Community Access Road Project (MFCAR) with a letter attached to the email. The letter was addressed to Andrea Nokleby from Chief Dorothy Towedo of ARFN, and copied Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team.

The letter thanked Andrea for the invitation to the Aboriginal Treaty and/or Rights and Interests (ATRI) Forum being held in Thunder Bay on November 21-23, 2023, but declined the invitation since ARFN is in an election period and unable to participate as a result. The letter indicated that ARFN's decision to not attend the ATRI Forum should not be misconstrued as a lack of willingness to participate in engagement activities. ARFN noted their position that proponents and the Crown must obtain ARFN's consent for projects/activities that use, affect or harm their homeland territory and that they are one of ten plaintiff First Nations in Treaty Nine pursuing a court case that says the Treaty Nine nations have maintained their jurisdiction over their homeland territories. ARFN maintains their decision making authority and control and their permission is required when others want to use ARFN's homeland. The letter noted that any co-jurisdiction regime developed must respect both Anishinaabe laws and Canadian laws.

The letter noted that the activities the roads will generate will have significant impacts on ARFN's ATRI, as as such, they require ARFN's consent and engagement designed to garner their consent. ARFN listed problems with the ATRI Forum in being able to meet any reasonable requirements of this kind of engagement: 1) The event is an open conference forum involving many parties where detailed information and sharing cannot occur; 2) The forum was described as not to involve Indigenous Knowledge (IK) but IK underpins ARFN's Anishinaabe laws and ARFN cannot engage from their perspective without engaging from their knowledge and legal base and; 3) It is unclear whether the Forum will be used in the Crown's duty to consult and accommodate which has not yet adapted to legal changes such as those required by UNDRIP and ARFN must be assured that the Forum is not going to allow the Crown to say that this duty is met or partly met.

The letter closed by indicating ARFN looks forward to resuming discussions about the projects following the community's election. ARFN noted they are confident that they can come to an understanding about how they expect to be consulted and engaged regarding the three proposed projects.

Topics to be Discussed: WSR Consultation Progress Report Round 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Aroland First Nation's (ARFN) Chief Sonny Gagnon which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 2. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 2. The letter explained that the Consultation Progress Report summarizes the documents from Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025 and provided a list of topics and milestones which are proposed to be addressed as part of the engagement and consultation activities for Round 3. Michael's email and cell phone contact information was provided if ARFN has any questions or comments.

The letter explained that the WSR Project team mailed a package containing the Consultation Progress Report for Round 2 (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter provided the status of delivery as of February 15, 2024. An overview of the Consultation Progress Report for Round 2 was provided and the letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on February 20, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on Construction Camps and other Project opportunities, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if ARFN has any questions or comments.

Topics to be Discussed: Draft Community-Specific Preliminary Existing Conditions Document
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Aroland First Nation's (ARFN) Chief Sonny Gagnon with a letter and report attached regarding the Community-Specific Existing Conditions Summary Document. The letter requested the community's review of the draft Community-Specific Existing Conditions Summary document, which is based on the data and information collected for the Socio-Economic Existing Conditions Report of the EA/IA and presents the preliminary findings specifically collected for ARFN. The letter provided a list of the community-specific baseline information provided in the document and indicated that the Project Team would appreciate hearing feedback from the community on the document as the team is always open to working with the community for further improvement on the content.

Topics to be Discussed: Draft Preliminary Existing Conditions Document and Consultation Round 2 Report Follow Up
McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team phoned the Aroland First Nation band office to follow up with Chief Sonny Gagnon about the Draft Preliminary Socio-Economic Existing Conditions Document that was sent to the Chief via email on March 11, 2024 and the Consultation Round 2 Report that was mailed to the community on January 29, 2024. The purpose of the call was to see if the community had any feedback or questions on the report. McKenna spoke with the receptionist who indicated that the Chief was not in office. McKenna left a message with her name, number, and purpose of the call.

McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a fax to Aroland First Nation's (ARFN) Chief Sonny Gagnon, with a letter and poster attached. The letter explained that the WSR Project team mailed a package containing the Consultation Progress Report for Round 2 (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on April 15, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on Groundwater Preliminary Findings, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if ARFN has any questions or comments.

Topics to be Discussed: WSR Newsletter - Issue 33, Consultation Progress Report Round 2 Follow Up, Virtual Community Information Sessions, Livestream, Radio Show
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Aroland First Nation's (ARFN) Chief Sonny Gagnon, with a letter, poster, and English WSR Newsletter - Issue 33 attached. The letter explained that the WSR Project team mailed a package containing the Consultation Progress Report for Round 2 (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on April 22, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on Geology, Terrains, and Soils Preliminary Findings along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if ARFN has any questions or comments.

The English WSR Newsletter – Issue 33 was also attached and provided information about the Aquatic Habitat Preliminary Findings and the upcoming community Virtual Information Sessions for Round 3 of consultation. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael and Don Parkinson of AtkinsRéalis provided their email address and phone number if ARFN has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 3 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 3 for Aroland First Nation (ARFN) on May 6, 2024. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. The meeting began with a video of Chief Wabasse discussing the importance of the project to the Webequie Community. Don explained that the Part 1 of Consultation Round 3 will provide an overview of the Environmental Assessment/Impact Assessment (EA/IA), how the EA/IA will be carried out, and the preliminary results of effects assessment for select value components. Don provided an update on the engagement and consultation to date and provided an overview of the key themes of feedback from communities in Round 1 and 2. Don explained that the presentation provided in the session is a shorter version of the full presentation available on the WSR website. The WSR Project Team had a platform which provided a real-time translation of the session in Oji-Cree. No participants from ARFN were in attendance. Don reiterated that the Project Team would like to hear from ARFN community members and that a recording of the session would be made available through YouTube and the WSR Website.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Carolina Montrose and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Sonny Gagnon of Aroland First Nation with an attached invitation for the Three Road Project Gathering & Expo hosted by Webequie First Nation (WFN) and Marten Falls First Nation (MFFN), The invitation noted that the event was funded by the Province of Ontario, our Treaty Partner and that it would be held in Thunder Bay on June 11-13, 2024. The invitation also noted the need to continue the momentum of the last two gatherings which focused on Aboriginal and/or Treaty Rights and Interests. In addition, the invitation notes that the Gathering & Expo will provide participants with an engaging and interactive space for consultation to learn more about the projects, ask questions, and share feedback focusing on water, peatlands and building roads on peatlands. Day 1 will be specifically for an Elders gathering, providing a comfortable space for Elders to gather and discuss the Projects. The invitation provided funding information and an email address to access the funding.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team was one of three hosts for the Three Roads Projects Gathering & Expo (Gathering) held at the Superior Inn and Conference Centre in Thunder Bay on June 11-13, 2024.

The purpose of the Gathering was to create a respectful, and collaborative space for consultation to continue to build an understanding of the three road projects and their potential impacts by: 1) Providing a comfortable space for Elders to gather and discuss the Projects; 2) Creating opportunities to engage directly with the Project proponents and consulting teams sharing information about the Projects and; 3) Discussing the upcoming draft Environmental Assessment Report / Impact Statement (EAR/IS) Review Process for WSR and the Marten Falls Community Access Road (MFCAR) Project.

Day 1 was set aside exclusively as an Elders Gathering to gather and engage with the individual Project Teams for all three projects to share their perspectives. By design, there were no government representatives in attendance on Day 1; only Indigenous people and Indigenous consultants, to encourage a more open and comfortable discussion. This was a new and innovative approach to engaging with Indigenous communities by the creation of a sacred space that was authentic, comfortable and open.

Day 2 was open to all participants. The morning focused on a series of technical presentations on key issues identified in previous engagement and consultation opportunities (peatlands (and other terrain), building roads on peatlands, aspects of water and fish populations). The afternoon was an Expo where participants could visit a series of booths to have one-on-one conversations with Project Team members from each of the road projects, various technical aspects of the Projects, Ontario and the Impact Assessment Agency of Canada.

Day 3 was also open to all participants. This session was a half day workshop on a common approach to reviewing the upcoming circulation of draft EAR/ISs for two of the three road projects so that there would be sufficient time to review and provide feedback. Each project team wanted to share the common approach to reviewing the draft EAR/ISs with Indigenous Nations early so that there was a shared understanding of what to expect and when. This would allow Indigenous communities to prepare themselves in advance with respect to resources to assist in the review.

Eligible Indigenous communities were invited to attend with 3 participants from each community being funded by the province. A total of 44 individuals signed in for Day one of the gathering, A total of 62 individuals signed in for Day 2, and a total of 48 individuals signed in for Day 3, but please note that not all participants opted to sign in. In total 3 participants from Aroland First Nation (ARFN) attended the Gathering: Councillor Mark Bell, and 2 other ARFN member.

Contact Date: Jun 17, 2024 12:00 Method: Indigenous Community Meeting
Topics to be Discussed: Virtual Information Session Round 3 Part 2
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team held a virtual session as part of Consultation Round 3 for Aroland First Nation (ARFN). An Oji Cree translator provided real-time translation of all meeting content. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 3 Part 2 presentation that began with a review of the project to date, followed by a discussion of preliminary results for the vegetation, wildlife, social environment, aboriginal and Treaty rights valued components. The presentation concluded with discussion on the cumulative effects assessment and the assessment of other aspects and effects. Participants were informed that the unabridged version of the presentation was available on the website and that this version reported preliminary results for several other valued components. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from ARFN were in attendance.

Topics to be Discussed: Field Notice Fall Geo-Technical Drilling Program
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Aroland First Nation's (ARFN) Chief Sonny Gagnon regarding a Field Notice for the Fall geo-technical drilling program. The email indicated that AtkinsRéalis is providing a notification to complete a drilling program for the WSR project to further engineering design and support the coordinated provincial Environmental Assessment and Federal Impact Assessment. The letter is intended to provide notice as required by Land Use Permits pending issuance by the Ministry of Natural Resources (MNR). The email indicated that all works will be conducted in accordance with the permit conditions issued by MNR. Attached to the email was the Field Notice explaining what is happening, the schedule and what to expect. For further questions, the contact information for Hayden Yip of AtkinsRéalis was provided.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Aroland First Nation's (ARFN) Chief Sonny Gagnon with a letter attached to the email regarding the planned early circulation of the draft Environmental Assessment Report / Impact Statement (EAR/IS). The letter advised that the Project team is planning an early circulation of the draft EAR/IS to provide the opportunity for ARFN to review the draft EAR/IS prior to its release to stakeholders and the public for formal review. The letter explained that the team anticipates the draft EAR/IS to occur in late fall or early winter of the fiscal year 2024/2025 which will provide communities with an extended review period of 60-days to provide their review and comments. The letter explained that the team would follow up with the community as the project moves closer to the circulation of the draft EAR/IS, including the community would like to receive the document (electronic and/or hard copy). The letter explained that the Province of Ontario continues to offer funding agreements with eligible communities to participate in the EA/IA process for the WSR Project, including the review of the draft and final EAR/IS through the Participant Funding Initiative, and therefore will be following up to discuss resources needed by the community to take part in the extended review period of the draft EAR/IS. Michael provided his contact information for any questions or comments.

Topics to be Discussed: Consultation Progress Report Round 3
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Aroland First Nation’s (ARFN) Chief Sonny Gagnon which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 3. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 3. The letter explained that the Consultation Progress Report summarizes the documents from Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that next steps will involve engagement and consultation options for communities to review assessment findings in the draft Environmental Assessment Report / Impact Statement, including targeted sessions with Indigenous communities for feedback and input on the results of the cumulative effects assessment for the Project. The letter noted that the future engagement and consultation sessions for communities are tentatively scheduled to start in Winter 2024/2025. Michael's email and cell phone contact information was provided if ARFN has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 4 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team Starting conducted a virtual community meeting on the Zoom platform with Aroland First Nation. An Oji Cree translator provided real-time translation of all meeting content. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 4 Part 1 presentation that began with a review of the project to date, followed by a discussion of the process of effects assessment, then an explanation of cumulative effects and how they are determined and managed. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from ARFN were in attendance.

Topics to be Discussed: Consultation Progress Report Round 3 File Transfer
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) sent an email to Aroland First Nation's (ARFN) Chief Sonny Gagnon with a letter attached regarding follow up for the Consultation Progress Report for Round 3. The letter indicated that on November 5, 2024, the Project team mailed a package via Canada Post to the community containing the Consultation Progress Report for Round 3. The letter also indicated that due to the Canada Post strike which began on November 15, 2024, there has been a delay to the delivery of the report and the team will be sending the files via WeTransfer in a separate email.

The letter explained that the Consultation Progress Report summarizes the documents from Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. A list of key milestones and topics covered in the round of consultation was provided. The letter indicated that the WSR Project Team is available for additional engagement sessions and provided a list of engagement options. Michael's email and cell phone contact information was provided if ARFN has any questions or comments.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Ian Frederickson and Michael Fox of Indigenous and Community Engagement (ICE) and the?Webequie?Supply Road (WSR) Project team sent an email to Chief Sonny Gagnon. Jerry Shabogamik, and Shawg Atlookan of Aroland First Nation with links to?invitations for the Three Road Project Gathering & Expo hosted by ?Webequie?First Nation (WFN) and Marten Falls First Nation (MFFN) with support from the Province of Ontario. The email noted that the gathering will provide an engaging and interactive consultation space to discuss the WSR draft EAR/IS, Marten Falls Community Access Road draft EAR/IS, and Northern Road Link Projects. The invitation provided the dates and locations for the events in Thunder Bay and Timmins: February 19-20, 2025, at the Valhalla Inn Hotel in Thunder Bay, and February 25-26, 2025, at the Cedar Meadows & Spa in Timmins. A general summary of event highlights was provided along with information about funding and attendance. The invitation asked the community to RSVP by January 31, 2025, to the Province of Ontario's email address provided?to reserve accommodations. The invitation noted that the event aims to?foster an understanding of the three road projects and their potential impacts while creating a collaborative space for consultation. For further questions regarding funding inquiries or additional details, the Province of Ontario's email address was provided.?

Topics to be Discussed: Winter 2025 Field Notice
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) sent an email to Aroland First Nation's (ARFN) Chief Sonny Gagnon with a winter field notice attached. The field notice indicated that field work has been scheduled to take place from February 19-March 1st, 2025 to manually remove caribou GPS radio tracking collars. The notice indicated that the collars were placed on the caribou to gather data on their populations, migration patterns, and habitat use. Following three years of data collection, the collars were set to automatically release in February 2024, however not all collars released as intended. The notice explained that a specifically trained team will manually remove collars without harming the animal. The notice also provided information on what to expect and where the team may need to travel but noted that the field team may need to travel outside the study area boundaries. A map was provided on the second page of the notice.

Topics to be Discussed: Virtual Information Session Round 4 Part 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a package via Canada Post to Aroland First Nation's (ARFN) Chief Sonny Gagnon, with a letter and poster advising that the WSR Project Team is hosting a virtual information session for Round 4 Part 2 for ARFN on January 27, 2024, from 11:00-11:45pm EST with registration links for the session. The information session will include the second presentation on WSR's Cumulative Effects Assessment. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter also included information on the Virtual Reality (VR) Open House where community members can access further information about the project and provide comments. The letter indicated that the WSR Project Team is available for additional engagement sessions and provided a list of engagement options. The letter also attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if ARFN has any questions or comments.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Ian Frederickson and Michael Fox of Indigenous and Community Engagement (ICE) and the?Webequie?Supply Road (WSR) Project team sent an email to Chief Sonny Gagnon. Jerry Shabogamik, and Shawg Atlookan of Aroland First Nation with links to?invitations for the Three Road Project Gathering & Expo hosted by ?Webequie?First Nation (WFN) and Marten Falls First Nation (MFFN) with support from the Province of Ontario. The email noted that the gathering will provide an engaging and interactive consultation space to discuss the WSR draft EAR/IS, Marten Falls Community Access Road draft EAR/IS, and Northern Road Link Projects. The invitation provided the dates and locations for the events in Thunder Bay and Timmins: February 19-20, 2025, at the Valhalla Inn Hotel in Thunder Bay, and February 25-26, 2025, at the Cedar Meadows & Spa in Timmins. A general summary of event highlights was provided along with information about funding and attendance. The invitation asked the community to RSVP by January 31, 2025, to the Province of Ontario's email address provided?to reserve accommodations. The invitation noted that the event aims to?foster an understanding of the three road projects and their potential impacts while creating a collaborative space for consultation. For further questions regarding funding inquiries or additional details, the Province of Ontario's email address was provided.?

Topics to be Discussed: Three Road Projects Gathering & Expo June 2024 Report
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team was one of three hosts for the Three Roads Projects Gathering & Expo (Gathering) held at the Valhalla Inn in Thunder Bay on February 19-20, 2025.

The purpose of the Gathering was to provide an engaging and interactive consultation space to discuss the Webequie Supply Road (WSR) Draft Environmental Assessment Report / Impact Statement (EAR/IS), Marten Falls Community Access Road (MFCAR) Draft EAR/IS and Northern Road Link (NRL) Projects.

Day 1 of the event was set aside for Project overviews, consultation panels, individual community breakout sessions, and project expo including information to assist with review of the draft EAR/IS for MFCAR and WSR and cumulative effects assessment.

Day 2 of the event covered the Aboriginal and/or Treaty Rights and Interests (ATRI) panel discussions, breakout sessions, and project expo including information to assist with review of the draft EAR/IS and MFCAR for WSR and cumulative effects assessment.

Eligible Indigenous communities were invited to attend with 3 participants from each community being funded by the province. A total of 28 individuals signed in for Day one of the gathering, A total of 38 individuals signed in for Day 2, but please note that not all participants opted to sign in. In total 2 participants from Aroland First Nation (ARFN) attended the Gathering over the 2 days.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Sonny Gagnon of Aroland First Nation (ARFN) with an attached letter regarding early circulation of the Draft Environmental Assessment Report / Impact Statement (Draft EAR/IS) for Review for the WSR Project. The letter advised the community that the Draft EAR/IS is now available for the community to review. The letter provided an overview of what is documented in the Draft EAR/IS and explained that it is being circulated in two stages to provide communities with an extended review period to provide comments on the document for a total of 120 days. The two stages of circulation are: 1) Early access for Indigenous communities from June 9 to October 7, 2025, and 2) Public and Stakeholders from August 8 to October 7, 2025. The letter explained that enclosed in the package is the Draft EAR/IS for the WSR Project for review which includes: One hard copy of the main body of the Draft EAR/IS, an electronic copy of the Draft EAR/IS and Appendices, and one hard copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree, and Cree. The letter also provided a link to the Draft EAR/IS on the Project website. The letter also noted that the draft Record of Consultation and Engagement with Indigenous communities, public, and stakeholders is not included in the Draft EAR/IS, but will be provided to the community when the Draft EAR/IS is released for public and stakeholder review on August 8, 2025. In the interim, consultation and engagement activities received from the communities is documented in the Consultation Progress Reports for Rounds 1, 2, and 3, previously sent to the community at key milestones in the EA/IA process, and can also be found on the Project website. The letter encouraged the community to actively participate in the review of the Draft EAR/IS and provided an email and/or mailing addresses to submit comments. For any questions or to schedule a meeting with the Project Team, Michael also provided his email and phone number.

WSR
WEBEQUIE
SUPPLY ROAD

November 2, 2021

Dear Chief,

On October 8th, 2021, after extended consultations, the Minister of the Environment, Conservation and Parks approved the final Terms of Reference with amendments for the Webequie Supply Road (WSR) project. You can find these amendments on the following website: https://www.ontario.ca/page/webequie-supply-road-project We are now proceeding with the environmental assessment in accordance with the approved Terms of Reference.

As part of the WSR communication and engagement activities, the project team produces regular project newsletters, which you find enclosed a number of copies for distribution to your community members.

If you have any questions, please do not hesitate to ask or phone me at 807-472-6147. We wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road

WSR240-WEB-PR-LT-0299 Web-WSR letter to Chiefs re Newsletter and approved ToR-2021-11-01

November 22, 2021

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment studies. This upcoming week, **WSR Presents: Caribou and Wolverine/Wildlife and Wildlife Habitat/Species at Risk/Breeding Birds.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 23rd at 2:00-3:00 (EST)**. We encourage you and your community members to listen, for this will give your community membersthe opportunity to ask questions. You may call during the radio show at the **toll-free number:1-844-424-0500.**

In addition, the live streaming event is scheduled on the same day as the above radio show at **4:00pm – 4:30pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. All sessions are recorded and accessible on YouTube, you can subscribe at: Webequie Supply Road - YouTube. We have regular updates on our Facebook page that features community photos, informative videos, Frequently Asked Questions along with project information. You can follow WSR on Facebook at Supply Road | Facebook, Twitter, Instagram and http://www.linkedin.com/company/wfnsupplyroad You may also call with questions on the same toll-free number provided above during the live streams.

The WSR Project Team is offering opportunities of engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the WSR Project.

Engagement Options

Method	Description
Focus Group Sessions	With proper Covid-19 protocols in place, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment studies. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse groups(women, elders, youth, land users, etc.)
Community Sessions	With proper Covid-19 protocols in place, community information sessions can be conducted, whereby the WSR Project Team will discuss the Environmental Assessment process with a question-and-answer period at the end of the presentation.
Drop-in Sessions	With proper Covid-19 protocols in place, community members can drop-in at a safe location todiscuss the Environmental Assessment process with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment process facilitated by the WSR Project Team using Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the Environmental Assessment process to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the Environmental Assessment studies presentation and set up a conference call number to go through the presentation based on the area of interest your team wants to focus on and answer any questions.
Local Radio Call In Show	Using the local community radio, the WSR can present the Environmental Assessment studies with a local translator that the WSR will pay for and explain the Environmental Assessmentprocess. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the Environmental Assessment process.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching the WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, then we can mail these hardcopy WSR poster to your community for local distribution and all you need to do is email or call us to inform us that you need hardcopies of WSR poster.

Lastly, given the high and daily usage of social media channels by Indigenous leaders and members, you, your Council, and your staff can also follow us on Facebook, Twitter, Instagram, and LinkedIn to stay updated and repost it on your social media accounts to assist in information access, information dissemination, and information request associated with the WSR Project's environmental studies.

To obtain information on the Project, or to provide comments, please visit our website at http://www.supplyroad.ca or contact me at 807-472-6147.

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road
michael.fox@supplyroad.ca

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Web-Preliminary Study Areas for Indigenous Land Use and Interests-2021-12-13

December 13, 2021

Chief Dorothy Towedo
Aroland First Nation
PO Box 10
Aroland, ON P0T 1B0

Re: Indigenous Knowledge / Indigenous Land and Resource Use Program for the Webequie Supply Road Project

Dear Chief Dorothy Towedo,

We hope that this letter finds you and your community well.

Webequie First Nation (WFN) is the proponent of the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will extend from Webequie Airport to the mineral deposit area near McFaulds Lake as shown in the enclosed project map. WFN has started the provincial environmental assessment (EA) and a formal Notice of EA Commencement was issued on October 29th, 2021. The WSR Project is also subject to a federal impact assessment (IA) and the Notice of Commencement of the IA was issued on February 24th, 2020. Collectively the EA and IA are referred to as the “assessments” and will examine potential effects of the WSR Project including mitigation and monitoring, and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS). We will continue to provide you with updates as the assessment process continues, and welcome and appreciate your input throughout the planned consultation and engagement activities.

With this letter, we would like to share with you that we are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program for the Project. The IKLRU Program is a critical component of the information base upon which the assessments will rely. The information generated through the Program will be used in concert with scientific approaches, and both knowledge systems will be given equal consideration in forming the foundation for baseline conditions, predicting potential project effects, including potential impacts to your inherent Indigenous rights and interests.

The purpose of the IKLRU Program is to:

- Promote sharing of IKLRU information relevant to the Project;
- Help identify potential impacts of the Project, including those on Indigenous rights and interests; and

- Collaborate and work with Indigenous communities to enhance positive impacts or to identify measures to avoid/reduce potential effects on Indigenous rights and interests.

As traditional stewards of the land, we all must make certain that development in the area appropriately addresses the rights, interests, values, traditions, concerns, and aspirations of Indigenous communities within the assessment context, during the life of the WSR Project, and beyond. It is in this spirit that we invite Aroland First Nation to participate in the IKLRU program.

The IKLRU Program for the WSR Project will occur in two phases:

1. Collecting existing Indigenous Knowledge and information on Indigenous land and resource use that communities are prepared to share with WFN in order to help inform the early stages of the assessments; and
2. Completing project-specific Indigenous Knowledge and Lands & Resource Use studies, or compiling information/data in other form, that can be provided to the Project Team for integration into the assessment.

At this point, we are enquiring whether Aroland First Nation is interested in participating in the IKLRU Program in either (or both) phases of the Program. We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the IKLRU Program for the WSR Project. In addition, the Project Team can help communities access this funding, where applicable.

While the IKLRU Program is distinct from the Consultation Program for the WSR Project, the two are complementary and collectively serve to solicit Indigenous perspectives, values and inputs with respect to project planning and assessment process. You may share as much or as little IKLRU information as you wish, and in whatever form you prefer. Your community will also have the opportunity to review the EAR / IS to ensure accuracy of IKLRU information, including if it has been adequately, appropriately, and respectfully represented within the assessment process.

While there are significant benefits to integrating Indigenous Knowledge from your community in the assessment, we also recognize that this knowledge belongs to your community and that confidentiality needs to be respected. Our approach to working with your community on the IKLRU Program will be guided by the following key principles:

- The people of your community are a source of knowledge on uses of the land and its resources, associated cultural practices, and community values.
- We are your partner – our goal is to work together with you to conduct the IKLRU Program in a way that contributes to your community's well-being so that Indigenous Knowledge and land and resource use information can be meaningfully integrated into the assessment process.

Protection and confidentiality of IKLRU information is of the utmost importance to the Project Team. To honour and respect this important information, we propose establishing an Indigenous Knowledge Sharing Agreement with your community prior to the collection and use of your community's information. The Sharing Agreement would outline how confidential and sensitive information would be utilized in the WSR Project's assessment and design process. It would also adhere to all community-specific protocols and OCAP (ownership, control access and possession) principles. Once you've confirmed participation in the IKLRU Program, we will work with you to prepare the Sharing Agreement. We have attached a draft Indigenous Knowledge Sharing Agreement for your review and consideration.

In order to confirm that Aroland First Nation is interested in participating in the IKLRU Program, we ask that you contact us by January 27, 2022. Our Project Team will also reach out to you in a few days if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council to discuss next steps, including the methods and protocols your community will follow.

To express your community's interest or if you have any questions regarding the IKLRU Program or the WSR Project, please feel free to contact Michael Fox (807-472-6147; michael.fox@indigenousengagement.ca) or Brianna Patrick (204-223-5770; brianna.patrick@indigenousengagement.ca) of the Project Team.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Chief Cornelius Wabasse
Webequie First Nation

Draft Indigenous Knowledge Sharing Agreement

INDIGENOUS KNOWLEDGE / INDIGENOUS LAND AND RESOURCE USE PROGRAM FOR THE WEBEQUIE SUPPLY ROAD PROJECT

Information Sharing Agreement

Purpose

The purpose of the Indigenous Knowledge and Land and Resource Use (IKLRU) Program Sharing Agreement is to:

- Document the shared understanding of how the Aroland First Nation IKLRU Study for the Webequie Supply Road Project will be completed;
- Document the anticipated activities that will be part of the IKLRU Program; and
- Document how IKLRU information will be integrated into the Environmental Assessment Report (EAR) / Impact Statement (IS).

Confidentiality and IK / TLU Sharing

- Webequie First Nation acknowledges that all IKLRU information is the property of Aroland First Nation and the individual knowledge holders who contributed to the study.
- Webequie First Nation will disclose the IKLRU as required through the regulatory process only.
- Webequie First Nation will store the IKLRU information in a secure location and it will be provided to the appropriate Project staff and consultants only.
- Webequie First Nation will use the IKLRU information to contribute to the EAR / IS.
- Webequie First Nation will not include the full IKLRU report or study in the EAR / IS.
- Webequie First Nation will provide relevant IKLRU information to the appropriate disciplines for use in their EAR / IS sections.
- Webequie First Nation will use the IKLRU information to assess impacts on Aroland First Nation land and resource use; thus, the IK section of the EAR / IS will summarize the IKLRU information without disclosing specific locations of use.
- Webequie First Nation will use the IKLRU information for the Project regulatory process only, including planning, design, assessment, construction, operation, maintenance and decommissioning.

IKLRU Study

Aroland First Nation and Webequie First Nation agree that the type of information in the IKLRU Study Plan and scope will be included in the IKLRU Study.

The IKLRU Study will include information about the geographic location of data collected. This can be as numerical coordinates or as a location on a map with appropriate reference points.

Webequie First Nation will accept any additional land and resource use-related information within the IKLRU Study Area, as community members deem appropriate.

Aroland First Nation and Webequie First Nation agree that upon completion of the IKLRU Study, Aroland First Nation will approve the Report for use in the EAR / IS.

Signing this Agreement

Aroland First Nation signing of this Sharing Agreement is no way represents their support for the Webequie Supply Road Project.

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Dorothy Towedo,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as “the assessments” and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite Aroland First Nation to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

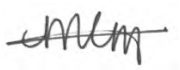
Next Steps

In order to confirm that Aroland First Nation is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,



Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist
Webequie Supply Road

Project Map

February 4, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment and Impact Assessment (EA / IA) process. This upcoming week's session is: **WSR Presents: EA / IA Process.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 9th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is exploring virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

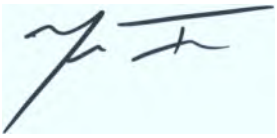
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

WSR
WEBEQUIE
SUPPLY ROAD

February 18, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Indigenous Knowledge. This upcoming week's session is: **WSR Presents: Indigenous Knowledge - Part 1.** The Project Team has planned an Indigenous Knowledge series, this upcoming week being the first part to that series.

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 23rd, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to brianna.patrick@indigenousknowledge.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

April 1, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Socio-Economics. This upcoming week's session is: **WSR Presents: Socio-Economics.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **April 6th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to brianna.patrick@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

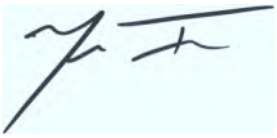
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

April 13, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on human health. This upcoming week's session is: **WSR Presents: Human Health.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **April 20th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

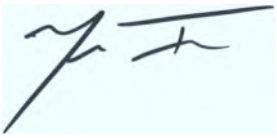
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

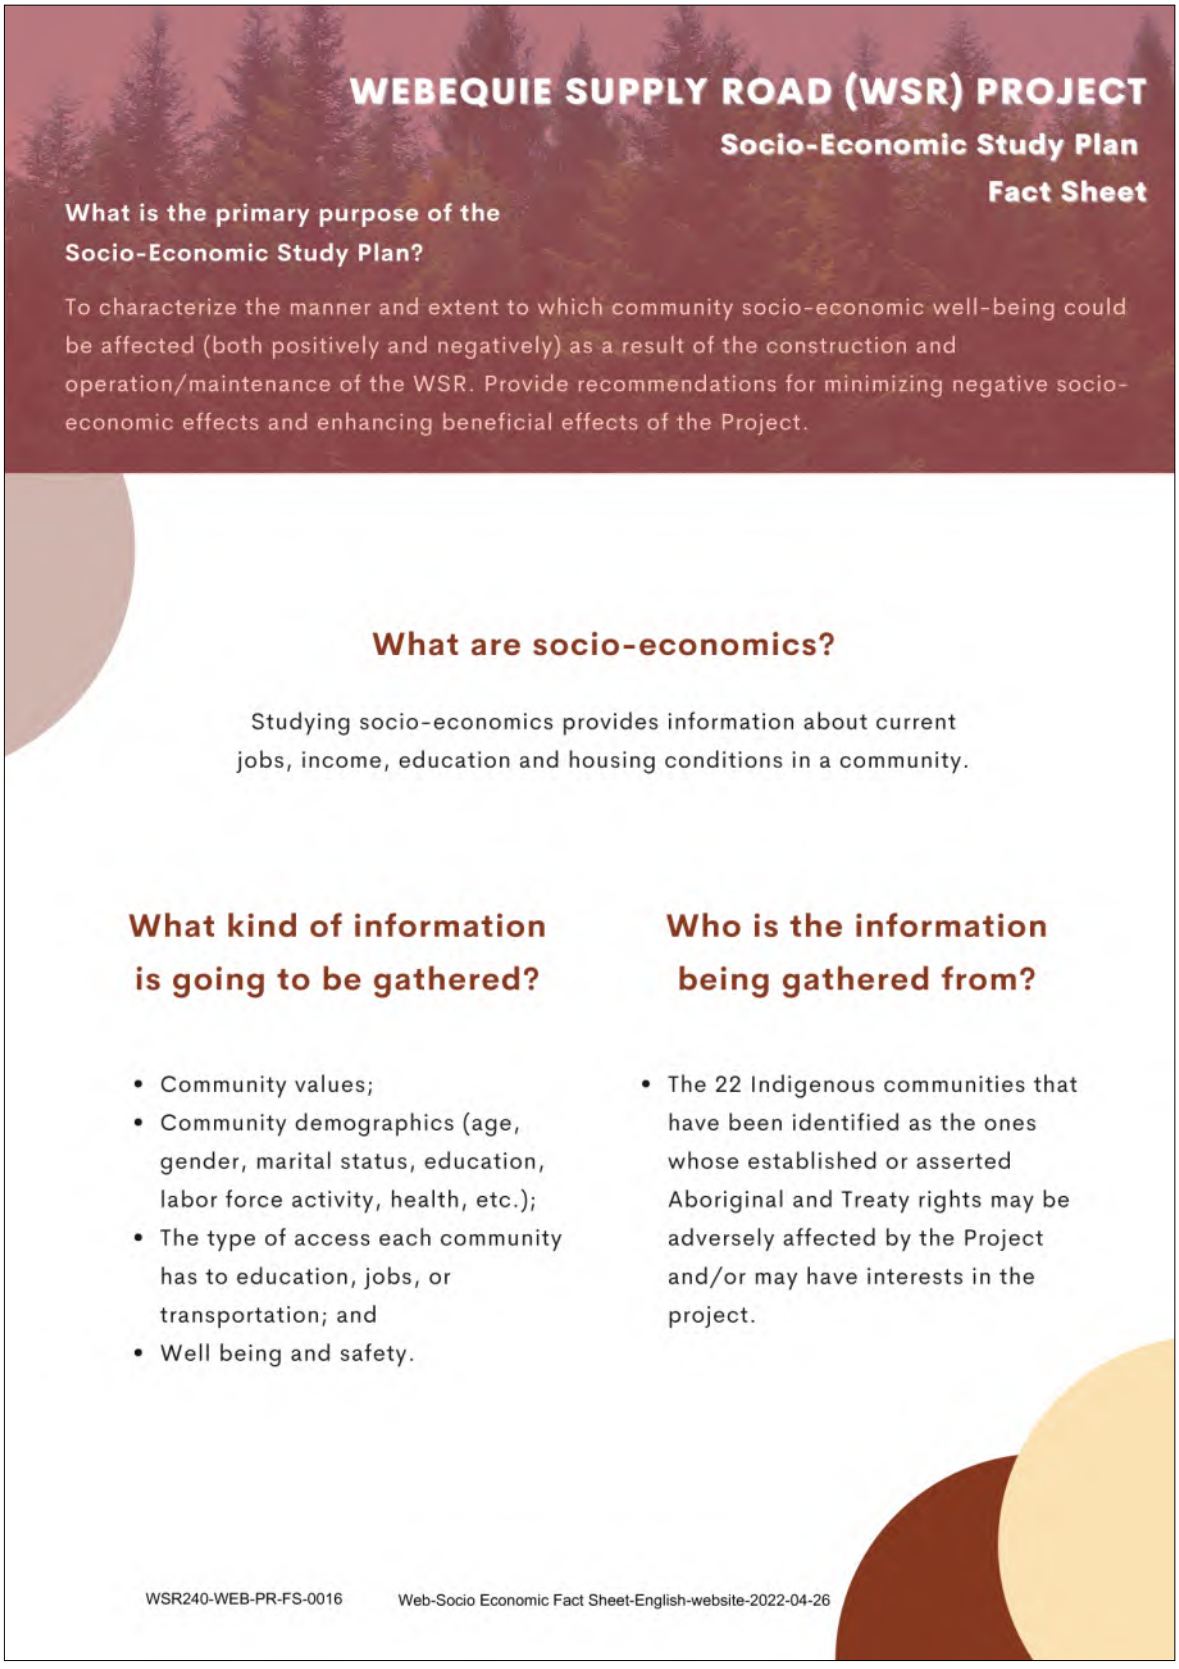
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.



WEBEQUIE SUPPLY ROAD (WSR) PROJECT

Socio-Economic Study Plan
Fact Sheet

What is the primary purpose of the Socio-Economic Study Plan?

To characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) as a result of the construction and operation/maintenance of the WSR. Provide recommendations for minimizing negative socio-economic effects and enhancing beneficial effects of the Project.

What are socio-economics?

Studying socio-economics provides information about current jobs, income, education and housing conditions in a community.

What kind of information is going to be gathered?

- Community values;
- Community demographics (age, gender, marital status, education, labor force activity, health, etc.);
- The type of access each community has to education, jobs, or transportation; and
- Well being and safety.

Who is the information being gathered from?

- The 22 Indigenous communities that have been identified as the ones whose established or asserted Aboriginal and Treaty rights may be adversely affected by the Project and/or may have interests in the project.

WSR240-WEB-PR-FS-0016 Web-Socio Economic Fact Sheet-English-website-2022-04-26

*The Project Team will respect protocols and work with each community to understand how the information will be transferred, stored, and applied, and will be protected and kept confidential.

How is the information on community socio-economics being collected?

Primary information will be collected from Indigenous communities:

- A socio-economic survey using Survey Monkey, which will be sent by e-mail/letter;
- Key informant interviews with Chief and Councils, band administration staff, social service providers, healthcare providers, and knowledge keepers; and
- Collection of Indigenous knowledge through engagement activities.

Secondary information will be collected and reviewed:

- Published data from government websites, Indigenous community websites, municipal websites, and other open-source data. This information will be used to identify community demographics, community infrastructure, community social services, etc.

WSR240-WEB-PR-FS-0016

Web-Socio Economic Fact Sheet-English-website-2022-04-26

Aroland, ON
P0T 1B0

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Dorothy Towedo,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as "the assessments" and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite Aroland First Nation to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

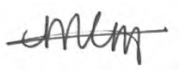
Next Steps

In order to confirm that Aroland First Nation is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,



Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist
Webequie Supply Road

April 29, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on air quality and noise & vibration. This upcoming week's session is: **WSR Presents: Air Quality + Noise & Vibration.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **May 4th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

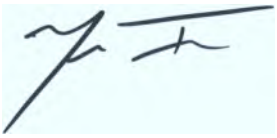
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

May 27, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on field studies related to water. This upcoming week's session is: **WSR Presents: Field Studies - Water.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 1st, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

May 30, 2022

Dear Chief Towedo,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps.

We will be offering a community information session, via Zoom, on **Monday, June 13 between 12pm and 1:30pm** for Aroland First Nation, where there will be a presentation on the WSR Project activities. We anticipate the community information session to be approximately 1.5 hours in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://maverickav.zoom.us/meeting/register/tZcqd--vrjgpEtPbxx8Wm7A4_7HmtguzNelm.

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: Meeting ID: 837 0670 3387 & Passcode: 844441.

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/aroland.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Lead
Webequie Supply Road

CC: Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 10, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on field studies related to fish and fish habitat. This upcoming week's session is: **WSR Presents: Field Studies - Fish and Fish Habitat.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 15th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

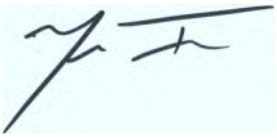
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 24, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on cultural heritage This upcoming week's session is: **WSR Presents: Cultural Heritage.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 29th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

July 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

The WSR Project Team is currently hosting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

If the WSR Project Team has already hosted a virtual information session for your community, you can watch the recording of your community's session at: **supplyroad.ca/sessions/**. You can leave questions or comments at any time on your community's page and the Project Team will provide a response. If the WSR Project Team has not yet hosted a virtual information session for your community, you can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Socio-Economic Primary Data Collection Program

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socioeconomic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. You can find more information regarding the program on the WSR website: https://www.supplyroad.ca/ik-and-socio-economic/

We would like to invite your community to participate in the WSR socio-economic primary data collection program. To express your community's interest or if you have any questions regarding the socio-economic primary data collection program for the WSR Project, please feel free to contact Marian Tibor-McMahon at 416-668-3298 or marian@indigenousengagement.ca.

At any time, you can access additional information on the WSR website: **supplyroad.ca.** You can also stay tuned with the WSR Project by following our social media channels:

August 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Consultation Round 2

Throughout the EA/IA phase, the Project Team conducts studies to gather information on a wide range of topics and consults with Indigenous communities, members of the public, and other stakeholders, to evaluate the Project and its potential effects. This month we are concluding our Consultation Round 1 and will be moving into Round 2, before the final Round 3.

We encourage community members to watch their information session at **supplyroad.ca/sessions/** where you can find your community-specific page.

Consultation Round 2 will focus on the following topics:

- Summary of input received from Consultation Round 1
- Identification and evaluation of alternatives
- Preliminary recommended preferred route and supportive infrastructure (aggregate/rock source areas, construction camps, access roads), including rationale for selection
- Preliminary engineering design elements of WSR (bridges/culverts)
- Next steps and schedule

Stay tuned with the WSR Project by following our social media channels:

October 19, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations - Wolverine.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **October 25th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Chief Dorothy Towedo
Aroland First Nation
P.O. Box 10
Aroland, ON
P0T 1B0

Re: Round 1 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Towedo:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report (electronic and hard copy), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);

- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 2 for the Project from Winter 2023 to Summer 2023. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 1;
- Identification and evaluation of alternatives (routes, aggregate source areas, etc.,);
- Preliminary recommended preferred route and supportive infrastructure (aggregate/ rock source areas, construction camps, access roads), including rationale for selection;
- Preliminary engineering design elements of WSR (bridges/culverts); and,
- Next steps and schedule.

We welcome any feedback and input your community may have on the attached Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

November 2, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week featuring our special guest storyteller/comedian Ron Kanutski. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations – Fish and Fish Habitat.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 8th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

November 17, 2022

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Biweekly Radio and Livestreaming Series is Back

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Building Roads in Muskeg Areas/James Bay Lowlands.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **Tuesday, November 22nd, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.

Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Other Ways to Stay Up To Date

You can also stay tuned with the WSR Project by following our social media channels:

December 14, 2022

Chief Dorothy Towedo
Aroland First Nation
P.O. Box 10
Aroland, ON
P0T 1B0

Dear Chief Towedo:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Consultation Progress Report Round 1

On October 28, 2022, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, December 14, 2022, the package status is delayed and is currently in transit to your community.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Engagement Opportunities

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Activity Date: Dec 20, 2022 15:58
File Name: Save the Date - 2 Day Aboriginal and Treaty Rights and Interests Forum - Thunder Bay February 2023.pdf
Activity Method: E-mail
Date Published: Dec 20, 2022

ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS
WEBEQUIE SUPPLY ROAD (WSR) • MARTEN FALLS FIRST NATION COMMUNITY ACCESS ROAD (MFFN CAR) • NORTHERN ROAD LINK (NRL)
YOU ARE INVITED!
2-DAY ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS FORUM
HOSTED BY THE PROVINCE OF ONTARIO
Thunder Bay
Victoria Inn Hotel and Convention Centre
555 Arthur Street West
February, 8 & 9 2023
Webequie First Nation and Marten Falls First Nation encourage you to participate in a 2-day forum focused on discussing potential impacts to northern Indigenous communities' Aboriginal and/or Treaty Rights and Interests as they relate to the following Projects:
Webequie Supply Road (WSR) • Northern Road Link (NRL)
Marten Falls First Nation Community Access Road (MFFN CAR)
Participant Funding
The Province of Ontario will fund up to 3 representatives from your community to attend, including travel, accommodation and meals. All questions about funding or the coordination of funding should be directed to the Province of Ontario at ea.participant.fund@ontario.ca.
Additional community representatives are welcome to attend.
Purpose
The Purpose of this Forum is to create a respectful, culturally-sensitive, and collaborative space to develop an understanding of Aboriginal and/or Treaty Rights and Interests in any of the Project areas (WSR, MFFN CAR, and NRL) as your Aboriginal and/or Treaty Rights and Interests and Interests may be impacted by these Projects. Please note the purpose of this event is to discuss Aboriginal and/or Treaty Rights and Interests and not to collect Indigenous Knowledge.
Who Should Attend from your Community
Representatives who are knowledgeable about and comfortable speaking to the Rights and Interests of your community in any of the Project areas are encouraged to attend.
RSVP to ea.participant.fund@ontario.ca by January 27th
(note that you can still attend without an RSVP)

Chief Dorothy Towedo
Aroland First Nation
P.O. Box 10
Aroland, ON
P0T 1B0

Dear Chief Towedo:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Consultation Progress Report Round 1

On October 28, 2022, we sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, January 27, 2023, the package status is delayed and is currently in transit to your community.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

We welcome any feedback and input your community may have on the Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Radio Show and Livestream Series

The WSR Project team will be resuming the radio show and livestreaming series in the coming weeks. Stay tuned for more information.

Engagement Opportunities

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to

raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Thank you very much and we look forward to hearing from you soon.

Webequie Supply Road (WSR) • **Northern Road Link** (NRL)
Marten Falls First Nation Community Access Road (MFFN CAR)

Participant Funding

The Province of Ontario will fund up to 3 representatives from your community to attend, including travel, accommodation and meals. All questions about funding or the coordination of funding should be directed to the Province of Ontario at **ea.participant.fund@ontario.ca**.

Additional community representatives are welcome to attend.

Purpose

The Purpose of this Forum is to create a respectful, culturally-sensitive, and collaborative space to develop an understanding of Aboriginal and/or Treaty Rights and Interests in any of the Project areas (WSR, MFFN CAR, and NRL) as your Aboriginal and/or Treaty Rights and Interests may be impacted by these Projects. *Please note the purpose of this event is to discuss Aboriginal and/or Treaty Rights and Interests and not to collect Indigenous Knowledge.*

Who Should Attend from your Community

Representatives who are knowledgeable about and comfortable speaking to the Rights and Interests of your community in any of the Project areas are encouraged to attend.

RSVP to ea.participant.fund@ontario.ca by January 27th
(note that you can still attend without an RSVP)

March 2, 2023

Dear Chief Towedo,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Monday, March 13th from 2:00pm-3:00pm EST** for Aroland First Nation, where there will be a presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/86260115933.

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 862 6011 5933.**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/aroland/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

At any time, you can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

WSR240-WEB-PR-LT-0476 Web-WSR Letter re Virtual Community Info Session ARFN-2023-03-02

March 9, 2023

Dear Chief,

Radio Show and Livestream

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: The Alternatives Assessment Process – An Overview.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on March 14th, 2023 at 12:00pm - 1:00 pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team will begin virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Chief Dorothy Towedo
Aroland First Nation
P.O. Box 10
Aroland, ON
P0T 1B0

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Towedo,

We hope that this letter finds you and your community well.

As you know from our previous correspondence, Webequie First Nation is the proponent of the Webequie Supply Road Project, a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities.

Today, we are writing to confirm whether your community has an interest in participating in the Socio-Economic Primary Data Collection Program and is follow-up to the invitation letter sent to you on December 20, 2021. In this letter, we outlined the purpose of the socio-economic study, types of information we would like to gather and suggested primary data collection methods (e.g., community surveys, focus groups, key informant interviews). Primary data is information collected first-hand directly with community members about issues and conditions of the community.

We have a timeframe for the EA/IA process to complete our studies and document the results. Our goal this year is to complete a draft Socio-Economic Existing Conditions Report, which documents the socio-economic baseline conditions of communities. We would like to collaborate with your community to discuss and collect socio-economic information and/or verify information gathered to-date based on current desktop research to help us to understand existing social and economic conditions.

The preliminary “Valued Components” for the EA/IA, which represent aspects of social and economic conditions that are important to you and the community, and require information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;

- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

In order to meet the schedule for the completion of the EA/IA study, we respectfully request an indication of your community's interest in participating in the Socio-Economic Primary Data Collection Program by **April 17, 2023**, as it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by **June 16, 2023.**

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Heather Swan, Deputy Project Manager
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Michael Fox, Regional Consultation Coordinator, Webequie Supply Road
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, SNC-Lavalin Inc.

March 22, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Alternatives Routing in the Preferred Corridor.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, March 28th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Analysis of Alternatives- Multiple Accounts Analysis - What is it?**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, May 9th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

May 17, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternatives for Supportive Infrastructure (i.e., camps, laydown areas, aggregate/rock sources, access roads).**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Wednesday, May 24th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

May 24, 2023

Dear Chief,

We would like to provide a **correction to the times** provided on our previous correspondence related to the Webequie Supply Road (WSR) project radio show and livestream happening today.

Radio Show and Livestream
The WSR Project team will be resuming the live streaming and radio call-in show today. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternatives for Supportive Infrastructure (i.e., camps, laydown areas, aggregate/rock sources, access roads).**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Wednesday, May 24th, 2023 at 6:00pm – 7:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

The livestreaming event is scheduled on the same day as the above radio show at **7:30pm – 8:00pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we apologize for any confusion this may have caused and we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

May 26, 2023

Dear Chief Towedo,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Monday, May 29th between 2:00pm-3:00pm EST** for Aroland First Nation, where there will be the second part of the presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/89436603236.

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 894 3660 3236.**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/aroland/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. At any time, you can access additional information on the WSR website: **www.supplyroad.ca** Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS

WEBEQUIE SUPPLY ROAD (WSR) • **MARTEN FALLS FIRST NATION COMMUNITY ACCESS ROAD** (MFFN CAR) • **NORTHERN ROAD LINK** (NRL)

MIIGWECH / MIIGWETCH / THANK YOU!

Webequie First Nation and Marten Falls First Nation greatly appreciate your community's participation in the 2-day Aboriginal and/or Treaty Rights and Interests Forum held in Thunder Bay on February 8th & 9th, 2023. The Forum focused on discussing potential impacts to northern Indigenous communities' Aboriginal and/or Treaty Rights and Interests as they relate to the following Projects:

Webequie Supply Road (WSR) • **Northern Road Link** (NRL)
Marten Falls First Nation Community Access Road (MFFN CAR)

AS PART OF THE ASSESSMENT PROCESSES FOR THE PROJECT(S), OUR GOAL IS TO WORK WITH YOU TO:

Develop an understanding of Aboriginal and/or Treaty Rights and Interests by each community within each distinct Project area

By understanding Rights and Interests we will be in a better position to have discussions about potential Project(s) impacts

Together, we can then look at ways of avoiding, reducing and mitigating potential negative impacts while enhancing potential opportunities to support Aboriginal and/or Treaty Rights and Interests

The Forum was also an important opportunity to:

- Meet face-to-face
- Connect on how we can work together
- Better understand the roles we all play in assessing potential impacts to Aboriginal and/or Treaty Rights and Interests
- Reduce consultation fatigue
- Provide input into the MFFN CAR Cultural Heritage and Archaeology Program

For your review and comment, please find attached:

- Summary of comments your community provided in the individual Project-Specific Breakout Session(s) and the MFFN CAR Cultural Heritage and Archaeology Workshop
- Summary of comments provided during the group plenary session (Day One Morning)

As First Nation Proponents we understand that assessing potential impacts to Aboriginal and/or Treaty Rights and Interests is complex and iterative. As such, we would greatly appreciate the opportunity to meet with your community one-on-one to further our conversations on this important part of the assessment processes.

Based on positive feedback, we plan on hosting another session in the coming months.
Please stay tuned for more information.

To ***schedule a one-on-one meeting*** or to share further information about your Aboriginal and/or Treaty Rights and Interests with Project Team Representatives please contact:

ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS

Webequie Supply Road (WSR) • Northern Road Link (NRL) • Marten Falls First Nation Community Access Road (MFFN CAR)

ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS FORUM
FEBRUARY 7th & 9th, 2023
THUNDER BAY, ON
GENERAL SUMMARY

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
1.	Webequie First Nation	Need to condense information in a way communities can understand as big documents is not their way to looking at things.	The proponents are taking steps to ensure the project information is understood, such as generating fact sheets, newsletters, and plain language summaries of key documents. In addition, some key documents are translated to Indigenous languages. The proponents will endeavour to continue to provide project information in a way that is concise and uses layman's terms whenever possible.
2.	Webequie First Nation	Important to take the time to listen and learn from First Nations.	Comment acknowledged. The proponents are committed to pursuing open dialogue and consultation with Indigenous communities during the environmental assessment processes.
3.	Attawapiskat First Nation	Community members do not know what is going on with the road Projects. Proponents tend to deal with Chief and Council and information does not get down to the grassroots people. The colonial processes of Chief and Council do not always represent the interests of the Treaty Rights holders.	The proponents will continue to discuss with community leadership how to ensure that community members are reached directly during consultation and engagement activities.
4.	Attawapiskat First Nation	Do not see Treaty people at the forum, only business people.	All Indigenous communities scoped into the EA/IA processes by the Province and IAAC were invited to attend the ATRI Forum.
5.	Attawapiskat First Nation	Do not see Treaty people at the forum, only business people.	All Indigenous communities scoped into the EA/IA processes by the Province and IAAC were invited to attend the ATRI Forum.

6.	Attawapiskat First Nation	We (Attawapiskat First Nation) only received notice for the IAAC Northern Road Link Project Open House one day before the session. IAAC is not advertising its consultation and they are not meeting with the people.	Thank you for this comment. We will share with IAAC.
7.	Attawapiskat First Nation	It is important to talk to Treaty Rights holders and that is why he is streaming the session back to the community.	The proponents will look into options to live-stream consultation and engagement activities when possible.
8.	Webequie First Nation (Chief)	Information being shared at the Forum will help the Proponents see what the impacts to Aboriginal and Treaty Rights may be and will help them make good decisions.	Comment acknowledged.
9.	Webequie First Nation (Chief)	Need to find balance between traditional way of living and the new way of life.	Comment acknowledged. The proponents looks forward to learning more about Indigenous communities' traditional way of life through the Indigenous Knowledge (IK) Programs.
10.	Webequie First Nation (Chief)	There are challenges of keeping Aboriginal and/or Treaty Rights and Interests information confidential. It will be up to each community to decide whether to share information, get feedback and report back to their communities	The proponents acknowledge that it is up to each community to decide whether to share information. It is anticipated that Indigenous Knowledge (IK) collected through the IK Programs will be governed by IK Sharing Agreements that indicate how confidential information will be used to inform the effects assessment but will be protected from public or third-party disclosure.
11.	Webequie First Nation (Chief)	Transparency is important when discussing Aboriginal and/or Treaty Rights and Interests.	Comment acknowledged.

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
12.	Aroland First Nation	Some communities pulled out of the Forum because they were told that advisors were not welcome at the Forum. Aroland First Nation decided to stay despite the fact they did not have their advisors with them to get information as they were not able to meet because of the COVID pandemic.	"The proponents acknowledge there was a miscommunication during the planning of the ATRI Forum. The proponents thank Aroland First Nation for staying in the forum despite this miscommunication. The proponents welcome Indigenous community Advisors/Consultants in all Indigenous consultation and engagement activities for the EA/IA processes.
13.	Aroland First Nation	The group is talking about consultation but this cannot be consultation if community advisors are not present.	The proponents welcome Indigenous community Advisors/Consultants in all Indigenous consultation and engagement activities for the EA/IA processes.
14.	Aroland First Nation	Aroland First Nation is key to the Projects but feels left out. Further, it is a hard position us (for Aroland First Nation) if our neighbours to the north want to do things. The Proponents need to do better.	Comment acknowledged. Marten Falls First Nation and Aroland First Nation have initiated a nation to nation dialogue to resolve concerns raised by Aroland First Nation and are working towards building a collaborative relationship.
15.	Aroland First Nation	The Proponents need to do better to understand what Aroland First Nation wants to do as well.	The proponents are committed to collaborating with Aroland First Nation throughout the EA/IA processes.
16.	Aroland First Nation	We (Aroland First Nation) is attending the Forum to build relationships with our neighbours.	The proponents thank Aroland First Nation for participating in the ATRI Forum. The proponents also aim to build relationships with our neighbours, and are committed to pursuing open dialogue and consultation with Indigenous communities during the EA/IA processes.

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
17.	Aroland First Nation	Aroland First Nation will not support any development until the federal Regional Assessment is completed. What will the cumulative effects be. Aroland First Nation has written letters to that effect.	"The proponents acknowledge Aroland First Nation's request that the Regional Assessment precede the individual road assessments; however, completion of the Regional Assessment in the Ring of Fire Area is not a requirement for the proponents to proceed with the individual EA/IA processes. It is the proponents' understanding that the Impact Assessment Agency of Canada (the Agency) is currently engaging with interested Indigenous communities on a proposed approach for a Regional Assessment that could be co-led by the Agency, Indigenous communities and Ontario. Information generated by the Regional Assessment will be incorporated into the Project's EA/IA as it becomes available. The decision to proceed with the EA/IA processes for the three road projects is consistent with the agreements between the proponents and the Province of Ontario. The proponents are committed to realizing the intended/perceived benefits of the roads for their respective communities, and the region as a whole, within a reasonable timeframe. Deferring/pausing the individual EA/IA processes does not align with these objectives. The EA/IA for the road projects will each include a cumulative effects assessment. The scoping of the cumulative effects assessments will include other past, present or reasonably foreseeable projects and activities, including the other road projects as well as proposed mining projects in the region.

ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS

Webequie Supply Road (WSR) • Northern Road Link (NRL) • Marten Falls First Nation Community Access Road (MFFN CAR)

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
18.	Aroland First Nation	The parties need to rethink the strategy about not allowing advisors. It is strange that government and Proponent advisors are here, yet First Nations are denied their advisors. Aroland First Nation will listen, watch, participate and report back to the community.	The proponent acknowledges there was a miscommunication during the planning of the ATRI Forum. The proponent welcomes Indigenous community Advisors/Consultants in all Indigenous consultation and engagement activities for the NRL Project's EA/IA process.
19.	Aroland First Nation (Chief)	Need to work with Council to answer to members. We came to listen and everyone needs to work together. Proponents need to work with Aroland First Nation.	The proponents are committed to collaborating with Aroland First Nation throughout the EA/IA processes.
20.	Aroland First Nation (Chief)	We (Aroland First Nation) welcome and support Marten Falls First Nation for the Community Access Road Project only, but now there are other things attached (NRL, WSR). Why is Aroland First Nation not involved and why wasn't the community been asked to participate in the development of the Project(s).	Comment acknowledged. Marten Falls First Nation and Aroland First Nation have initiated a nation to nation dialogue to resolve concerns raised by Aroland First Nation and are working towards building a collaborative relationship.
21.	Aroland First Nation (Chief)	The Road Projects will affect everyone and we (Aroland First Nation) are already seeing impacts that will change everything. You can not reverse impacts.	The proponents understand the roads would result in effects/changes, and are conducting individual EA/IA processes in an effort to better understand those effects and develop measure to mitigate negative effects and enhance positive effects.
22.	Aroland First Nation (Chief)	We (Aroland First Nation) want to build a relationship with Marten Falls First Nation and we don't want to fight with our relations. Government is making us fight with our relations and it is confusing.	The proponents appreciate Aroland First Nation's desire to build a relationship and work together.
23.	Aroland First Nation (Chief)	Received texts from other First Nations about opting out of the Forum. We thought about opting out, but I wanted to be open and share my feelings, so we stayed at the Forum.	The proponents appreciates Aroland First Nation's participation in the ATRI Forum.
24.	Marten Falls First Nation	Marten Falls First Nation representative asked to respond to some of the comments made by the Aroland First Nation Chief.	Comment acknowledged.

ABORIGINAL AND/OR TREATY RIGHTS AND INTERESTS

#	Indigenous Community	Comment/Issue Raised	Post Forum Response
25.	Marten Falls First Nation	Marten Falls First Nation representative noted that the Proponents have made every effort to meet and consult with Aroland First Nation, but this has been refused for a number of reasons including the COVID pandemic.	Comment acknowledged.
26.	Marten Falls First Nation	There are many ways to communicate, so the Marten Falls First Nation representative disagrees with the notion that the Proponent is not consulting. Issues should not be construed as an argument but rather debating.	Comment acknowledged.
27.	Marten Falls First Nation	Marten Falls First Nation representative recalled a story of a proposed forestry agreement between 3 First Nations that was stalled for more than a year. The Chiefs finally met to discuss and they were able to reach an agreement. There needs to be meetings with just the Chiefs. They did not have advisors and consultants back then. Chiefs need to get together and talk. That is why they are elected.	Comment acknowledged.

Comment/Responses – Aroland First Nation

#	Comment/Issue by Aroland First Nation	Project Response at Forum	Post Forum Response
1	Community Advisors/Consultants should be permitted to attend sessions when invited by a First Nation to assist/advise them.	The Proponent was not aware that this was communicated to Indigenous Communities and this is not the position of the Proponents. Indigenous Community Advisors/Consultants will be invited to participate at the request of the communities in the future. There was a miscommunication within the Province as to this message.	The proponent acknowledges there was a miscommunication during the planning of the ATRI Forum. The proponent welcomes Indigenous community Advisors/Consultants in all Indigenous consultation and engagement activities for the NRL Project's EA/IA process.
2	Aroland First Nation Members are concerned the road(s) will change the way of life.		Comment acknowledged. The EA/IA will assess potential effects to the way of life (positive and negative) under several VCs, including: Indigenous Use of Land and Resources, Cultural Continuity and Well-being, Regional and Local Economy, Community Services and Infrastructure, Land Use and Recreation, and Community Safety (further described in Section 7 of the ToR). Mitigation measures will be developed within the EAR/IS as appropriate to address the potential Project-related effects identified for each VC.

© SNC-Lavalin Inc. 2021. All Rights Reserved. Confidential.

Northern Road Link

3	A Regional Assessment is required. The Regional Assessment will help to look at cumulative effects.		"The proponent acknowledges that Aroland First Nation's priority remains a comprehensive, Indigenous community co-led Regional Assessment for the Ring of Fire Area; however, completion of the Regional Assessment in the Ring of Fire Area is not a requirement for the proponent to proceed with the EA/IA process for the NRL Project. It is the proponent's understanding that the Impact Assessment Agency of Canada (the Agency) is currently engaging with interested Indigenous communities on a proposed approach for a Regional Assessment that could be co-led by the Agency, Indigenous communities and Ontario. Information generated by the Regional Assessment will be incorporated to the Project's EA/IA as it becomes available. The EA/IA for the Project will include a cumulative effects assessment (Section 6.7 of the ToR). The scoping of the cumulative effects assessment will include other past, present or reasonably foreseeable projects and activities, including the proposed WSR and MFCAR projects as well as proposed mining projects in the region. As part of the information gathering and stakeholder engagement programs for the EA/IA, the proponent intends to consult mining claim holders for information regarding the nature and timing of proposed mining activities in the Ring of Fire.

4	Aroland First Nation Chief and Council need to answer to their Members.		Comment acknowledged.
5	Animbiigoo Zaagi'igan Anishinaabek and Aroland First Nation have shared territory.		The proponent looks forward to learning more about Animbiigoo Zaagi'igan Anishinaabek and Aroland First Nation's shared territory through the Indigenous Knowledge (IK) Program.
6	Aroland First Nation would like to work together and involve everyone.		The proponent looks forward to collaborating with Aroland First Nation and other Indigenous communities during the Project's EA/IA through the Consultation and Engagement Plan and the IK Program.
7	Access should be controlled under the Public Lands Act to help protect areas. Abby Lake and Ogoki Roads are examples of controlling access through the Public Lands Act.		The proponent understands the need to limit new access points to protected areas. The proponent will discuss options for road access with Ontario, Indigenous communities, and general stakeholders during the EA/IA.
8	If the Project(s) proceed, this will create access into new areas and all the lakes and rivers will become potential tourist areas without any control over access.		The proponent understands the need to limit new access points to lakes and rivers. The proponent will discuss options for road access with Ontario, Indigenous communities, and general stakeholders during the EA/IA.
9	If Aroland First Nation were to support the Project(s) it would require some form of Indigenous control over access such as through the use of the Public Lands Act.		Comment acknowledged. The proponent will discuss options for road access with Ontario, Indigenous communities, and general stakeholders during the EA/IA.

10	Aroland First Nation (Members) hunts in the southern extent of the NRL LSA/RSA, the majority of the MFFN CAR LSA, and a significant portion of the MFFN CAR RSA, but-likely not including the more northern areas.		Comment acknowledged. Thank you for this information. The proponent looks forward to learning more about Aroland First Nation hunting areas through the IK Program.
11	Confrontations between Indigenous and non-Indigenous hunters is a major concern. Confrontations between Indigenous and non-Indigenous hunters is already happening and it will get worse with the development of the Project(s) as there will be more access into new/more areas. Indigenous control of road(s) access would help to manage this.		The proponent acknowledges Aroland First Nation's concerns about confrontations between Indigenous and non-Indigenous hunters and the need to limit new access points to hunting areas. The proponent will discuss options for road access with Ontario, Indigenous communities, and gneral stakeholders during the EA/IA.
12	It's good to work together between communities but it is also challenging to work together.		Comment acknowledged.
13	Aroland First Nation supports the MFFN CAR Project in principle but it is the development of everything else (i.e., NRL and the potential of the Ring of Fire) that is concerning to Aroland First Nation.		The proponent understands there are significant concerns surrounding development in the Ring of Fire region. The proponent plans to conduct a cumulative effects assessment that will include reasonably foreseeable projects mining projects in the region. It is the proponent's understanding that the Impact Assessment Agency of Canada (the Agency) is currently engaging with interested Indigenous communities on a proposed approach for a Regional Assessment in the Ring of Fire region that could be co-led by the Agency, Indigenous communities and Ontario.

14	Indigenous Communities will start competing for the same resources (game, fish, birds, vegetation, etc.) as the roads will make travel into the area easier for hunting, fishing, trapping and gathering).		The proponent acknowledges the access provided by the proposed road may result in communities competing for the same resources (game, fish, birds, vegetation, etc.). The EA/IA will assess this concern under the Indigenous Land and Resource Use VC (Section 7.1.1 of the ToR).
15	Things are starting to open up (socially, publicly) and Aroland First Nation wants to start moving things forward with consultation and engagement but a Christmas event (2022) resulted in 120 COVID cases in the community. This experience has made people tentative about gathering together again.		Comment acknowledged. The proponent acknowledges that in-person consultation and engagement has been challenging during the COVID-19 pandemic. The proponent continues to be committed to meeting with potentially affected communities throughout the EA/IA process to discuss their concerns about the Project and can offer alternate ways to have these discussions (e.g., virtual events) and in-person with appropriate COVID-19 protocols in place.
16	Aroland First Nation would like to see more studies done, including the Regional Assessment. Additional studies and information will help Aroland First Nation to make more informed decisions.		The proponent is currently undertaking extensive studies in the region to support the EA/IA, as described in the Project's ToR and IPD.
17	Road safety associated with mining trucks is a concern for Aroland First Nation.		Roadside safety is of paramount importance, so the Project will be designed in accordance with the MTO Roadside Design Manual (Section 10 of the Initial Project Description). In addition, the EA/IA will assess potential effects and mitigation measures for accidents and malfunctions.

18	Aroland First Nation asked about an option to join Marten Falls First Nation on the Project (i.e. CAR).	Yes, there are opportunities to explore working with Aroland First Nation on the Project(s). There is a potential to partition out the Project(s) where Aroland First Nation could have a role in a southern portion. Marten Falls First Nation would like to discuss this further with Aroland First Nation.	Comment acknowledged. Marten Falls First Nation and Aroland First Nation have initiated a nation to nation dialogue to resolve concerns raised by Aroland First Nation and are working towards building a collaborative relationship.
19	A MOU would need to be developed to establish a Binding Agreement to move the Project(s) along. A Binding Agreement is what Aroland First Nation Members want.		Comment acknowledged. Marten Falls First Nation and Aroland First Nation have initiated a nation to nation dialogue to resolve concerns raised by Aroland First Nation and are working towards building a collaborative relationship.
20	More transparency on the messaging for the purpose of the Project(s) is required. There is a feeling that the messaging is "smoke and mirrors".	The Proponents will look at ways to make the purpose of the Project(s) more clear for all people to understand.	"As stated in Section 1.4.1 (Purpose of the Project) of the Proposed ToR, the purpose of the Project is the design, construction, and operation and maintenance of a proposed all-season road between the proposed MFCAR and the proposed WSR. The Project will connect the mineral deposits in the McFaulds Lake area in the Ring of Fire to the highway network via the MFCAR, by constructing a new all-season multi-use gravel road with an approximate length of 117 km to 164 km (depending on the chosen corridor). The Project will also provide an opportunity to connect WFN to the highway network. The Project would enable a broader range of economic activity than currently exists by

			facilitating the transport of goods, services and resources. The objectives of the Project include: • Stimulate sustainable regional economic activity by facilitating all-season road movement of materials, supplies, and people to and from the mineral deposit area during Ring of Fire exploration and mine development. • Provide employment and other economic opportunities to MFFN, WFN and local Indigenous community members, while residing in or near their communities, preserving their language and culture. • Enable experience and training opportunities for youth to encourage pursuit of additional skills through post-secondary education.

June 1, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Proposed Criteria and Indicators for Evaluation of Alternatives for Supporting Infrastructure.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Tuesday, June 6th, 2023 at 12:00pm – 1:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

The livestreaming event is scheduled on the same day as the above radio show at **2:00pm – 2:30pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Virtual Information Sessions for Round 2 Part 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 6, 2023

Dear Chief Towedo,

We hope that this letter finds you and your community well.

As you know from our previous correspondence, Webequie First Nation is the proponent of the Webequie Supply Road Project, a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

The Indigenous Knowledge / Land and Resource Use (IKLRU) Program is a critical component of the information base upon which the assessments will rely. The information generated through the Program will be used in concert with scientific approaches, and both knowledge systems will be given equal consideration in forming the foundation for baseline conditions, predicting potential project effects, including potential impacts to your inherent Indigenous rights and interests.

We understand that Aroland First Nation currently has an active funding agreement with the Province of Ontario to participate in the IKLRU Program for the WSR Project, and that your community has initiated a community-led IKLRU study for the WSR Project.

Today, we are writing to confirm our planning timelines for the EA/IA process. Our goal this year is to finalize the baseline conditions report, which documents the existing conditions of communities and the environment. We want to work closely with you, to add your community's knowledge to the report.

Please let us know what your team is planning by the end of June 2023. We would like to receive IKLRU studies by the end of September 2023, to allow time for dialogue with your community on the information provided, and meaningful consideration of your Indigenous Knowledge in our understanding of the baseline conditions.

All knowledge that is shared will be safeguarded with a formal Confidentiality and Data Sharing Agreement, which will ensure that all input from the community will remain the ownership of the community, and that no information will be shared beyond the Project Team, without the consent of the community.

As the proponent, Webequie First Nation bears the responsibility for the Project and the assessment processes being applied to it. Like your community, we are traditional stewards of the land, and we must make certain that any development in the area is undertaken properly, and that the rights, interests, values, traditions, concerns, and aspirations of fellow communities are appropriately addressed within the assessment

context, during the life of the Project, and beyond. It is in this spirit that we are reaching out to collaborate with you.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project Team, we wish you and your community continued health and wellness.

Sincerely,
Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 14, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Proposed Aggregate / Rock Source Areas.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, June 20th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.
On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

July 26, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has been conducting virtual information sessions for each community with the second part of the presentation for Consultation Round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Stay Up to Date

You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

The WSR Project also has a YouTube channel where we post informational videos, past livestreams and radio shows, and communication materials. Please visit:
https://www.youtube.com/channel/UCh_heAjQoY2hPBPMr68MCzw

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks

Activity Date: Oct 19, 2023 14:32
File Name: Invitation ATRI Second Forum - October 2023.pdf
Activity Method: E-mail
Date Published: Oct 19, 2023

ABORIGINAL AND / OR TREATY RIGHTS AND INTERESTS

WEBEQUIE SUPPLY ROAD (WSR) • **MARTEN FALLS COMMUNITY ACCESS ROAD** (MFCAR) • **NORTHERN ROAD LINK** (NRL)

YOU ARE INVITED!

ABORIGINAL AND / OR TREATY RIGHTS AND INTERESTS FORUM
Led by Webequie First Nation and Marten Falls First Nation
Funded by Ontario, our Treaty partner

Thunder Bay
Valhalla Inn, 1 Valhalla Inn Rd

November 21 - 23, 2023

Building on the momentum of the first Aboriginal and / or Treaty Rights and Interests Forum in February 2023, Webequie First Nation and Marten Falls First Nation encourage you to participate in a follow-up Forum to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the following Projects:

Webequie Supply Road (WSR) • **Northern Road Link** (NRL) • **Marten Falls Community Access Road** (MFCAR)

Participant Funding

The Province of Ontario will fund up to 3 representatives from your community to attend the Forum, including travel, accommodation and meals. All questions about funding or the coordination of funding should be directed to the Province of Ontario at **ea.participant.fund@ontario.ca**.

Additional community representatives are welcome to attend.

Purpose

The Purpose of this Forum is to create a respectful, culturally-sensitive, and collaborative space to develop and/or confirm our understanding of the Project areas (WSR, MFCAR, and NRL) as your Aboriginal and / or Treaty Rights and Interests may be impacted by these Projects. *Please note the purpose of this event is to discuss Aboriginal and / or Treaty Rights and Interests and not to collect Indigenous Knowledge.*

Who Should Attend from your Community

Representatives who are knowledgeable about and comfortable speaking to the Rights and Interests of your community in any of the Project areas. Representatives who can continue this dialogue with their community to better understand and share Rights and Interests in any of the Project areas are also encouraged to attend.

On Day 3 of the Forum, we will be hosting a half-day discussion on Cumulative Effects as they relate to the Projects.

RSVP to ea.participant.fund@ontario.ca by October 23rd, 2023 to reserve your room at the Valhalla Inn. *(Later RSVP for Forum attendance is OK!)*

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience and in any method that you and your community prefer.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time, some communities may not wish to participate in the form of in-person meetings and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person engagement methods. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Public Information Center #2

The WSR Project team held Public Information Center (PIC) #2 in Thunder Bay on October 3rd for Indigenous communities & 4th for the general public and Timmins on October 12th for the general public. The PIC's were held to provide interested parties with an opportunity to learn about the ongoing assessment of alternatives that is being conducted as part of the EA/IA study and provide feedback. The PIC consisted of a presentation and an informal drop-in center with display information about the Project. Project team representatives shared information on the EA/IA process, studies being conducted, criteria for evaluation of route alternatives and alternative locations for supportive infrastructure (e.g., aggregate source areas, construction camps), including results from the assessment, the feedback we have heard to date, and future consultation and engagement opportunities.

If you were unable to attend the PIC #2, you can find the formal notice, livestream, more information on the study and progress, and updates on our project website: https://www.supplyroad.ca/

Aboriginal and/or Treaty Rights and Interests Forum

Building on the momentum of the first Aboriginal and / or Treaty Rights and Interests Forum in February 2023, Webequie First Nation and Marten Falls First Nation encourage you to participate in a follow-up Forum on November 21-23, 2023 at the Valhalla Inn in Thunder Bay, to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link, and Marten Falls Community Access Roads Projects.

The Purpose of this Forum is to create a respectful, culturally sensitive, and collaborative space to develop and/or confirm our understanding of the Project areas (WSR, MFCAR, and NRL) as your Aboriginal and / or Treaty Rights and Interests may be impacts by these Projects. Please note the purpose of this event is to discuss Aboriginal and / or Treaty Rights and Interests and not to collect Indigenous Knowledge.

If you have any questions regarding the Forum or need additional information to engage your community, please do not hesitate to reach out to us at the contacts below.

Andrea Nokleby
Marten Falls Community Access Road Project Team
Dillon Consulting Limited
3820 Cessna Drive Suite 510
Richmond, British Columbia, V7B 0A2
anokleby@dillon.ca

To Andrea Nokleby,

Thank you for inviting Aroland First Nation to the upcoming Aboriginal and/or Treaty Rights and Interests Forum ("the Forum") being held in Thunder Bay from November 21-23, 2023. Unfortunately, we must decline this invitation, since Aroland First Nation is currently in an election period and unable to participate as a result.

Our decision not to attend the Forum must not be construed as a lack of willingness by Aroland First Nation to participate in engagement activities. As you know, Aroland First Nation takes the position that proponents and the Crown must obtain our consent for projects and activities that use and affect or harm our homeland territory and we are one of ten plaintiff First Nations in Treaty Nine pursuing a court case that says that the Treaty Nine Nations have maintained our jurisdiction over our homeland territories. We maintain our decision-making authority and control and our permission or consent is required when others want to use our homeland. Our jurisdiction, or decision-making governance rights, are based on our Anishinaabe laws and run parallel to those of the Crowns jurisdiction based on Canadian laws. Any co-jurisdiction regime developed as a result of this case or otherwise, must respect both sets of laws.

The roads and activities they will generate and facilitate will have significant impacts on our Treaty and/or Aboriginal rights and interests, and as such, these require our consent and engagement designed to garner our consent.

- 2 -

We have several problems with the Forum in being able to meet any reasonable requirements of this kind of engagement:

1. It is more of an open conference forum involving many parties where detailed information and sharing cannot occur.

2. You indicate it does not involve Indigenous Knowledge, but that knowledge forms and underpins our Anishinaabe laws and we cannot engage from our perspective without engaging from our knowledge and legal base; we are not mere stakeholders in Canada's legal system.

3. It is unclear whether the Forum will be used to check boxes in the Crown's duty to consult and accommodate. While this duty under Canadian law has not yet adapted to legal changes such as those required by UNDRIP, it is still being applied and imposed and we must be assured that the Forum is not going to allow the Crown to say that this duty is met or partly met. This duty is weak enough without creating methods for its exercise that enable it to be weaker still.

In the Invitation for the ATRI Second Forum, October 17, 2023 it was shared that the Forum is intended to include discussions about how attendees Treaty and/or Aboriginal rights and interests may be impacted by the projects, but that discussions will not include collection of Indigenous Knowledge. But for Aroland First Nation, how we exercise our Treaty and/or Aboriginal rights and interests within our traditional territory *is* our Indigenous Knowledge. And that knowledge forms the basis of our laws and jurisdiction. We can't propose to understand potential impacts to our Treaty and/or Aboriginal rights without referencing, discussing or sharing our Indigenous Knowledge.

But some of our Indigenous Knowledge is confidential and proprietary and we will only share it when all parties commit to respecting our data sovereignty and upholding the principles of OCAP (Ownership, Control, Access and Possession). In our view, it is not possible to protect our data sovereignty and adhere to OCAP principles at a forum attended by multiple First Nations and their advisors, as well as consultants for all three projects and Crown representatives. Simply declaring a space as respectful and culturally-sensitive does not make it true.

We also seek transparency from you on whether the Forum is intended to fulfill the Crown's duty to consult. We understand that the Crown has delegated certain procedural aspects of the duty to consult to the proponents of the projects. We are concerned about the appropriateness of the Forum as a venue to meaningfully consult with Aroland First Nation. For consultation to be meaningful, the process must be commensurate to the potential level of impact a First Nation may experience and therefore, must be distinctions based and tailored to the interests of each individual First Nation. A forum attended by multiple First Nations facing varying levels of impacts and with unique concerns does not strike us as an appropriate method for meeting the threshold of meaningful consultation. This is especially true for Aroland First Nation, where the duty to consult falls to the deep end of the spectrum as a community that stands to be

adversely impacted by the proposed road projects. It is our perspective that the Forum must not be counted toward fulfilment of the Crown's duty to consult.

With the communications protocol now in place with Marten Falls First Nation we are looking forward to resuming discussions about these projects following our election. We are confident that we can come to an understanding about how we expect to be consulted and engaged regarding the three proposed projects.

Kind regards,

Chief Dorothy Towedo

Re: Round 2 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Gagnon:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR or the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report 2 (electronic and hard copy), which summarizes and documents Round 2 of the Engagement and Consultation Program with your community for your review and comment.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1;
- Overview of results of baseline studies to characterize existing conditions within the study area;

- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/ rock source areas, construction camps, access roads) from multifactor analysis, including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design); and
- Next steps and schedule.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report 2, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 2;
- Summary of preliminary effects assessment of the Project, including cumulative effects;
- Proposed impact management, mitigation and follow-up monitoring program; and
- Next steps in EA/IA process.

We welcome any feedback and input your community may have on the attached Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

Regional Consultation Lead
Webequie Supply Road

2

January 31, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week with changes to the order of topics that was provided on the January 2024 newsletter. See below the updated schedule of topics for February 2024:

Date	Topic
Monday, February 5, 2024	Road Access and Control Issues
Monday, February 12, 2024	Minimizing Project Impacts
Tuesday, February 20, 2024	Construction Camps and Other Opportunities
Monday, February 26, 2024	Bridges and Water Crossings

The topic of the upcoming session is: **WSR Presents: Road Access and Control Issues.**

The livestreaming event is scheduled for **February 5th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

February 08, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Minimizing Project Impacts.**

The livestreaming event is scheduled for **February 12th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date

February 15, 2024

Chief Sonny Gagnon
Aroland First Nation
P.O. Box 10
Aroland, ON
P0T 1B0

Dear Chief Gagnon,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, February 15, 2024, the package status is delayed and is currently in transit to your community.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Construction Camps and Other Project Opportunities.**

The livestreaming event is scheduled for **February 20th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet

with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

The livestreaming event is scheduled for **March 11th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek

input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local

	translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

DRAFT

1. Project Context

The proposed Webequie Supply Road (WSR, or 'the Project') is a proposed new all-season road approximately 107 kilometres (km) in length from the Webequie First Nation Reserve to the mineral deposit area near McFaulds Lake (also referred to as the Ring of Fire). The Project location is shown on Figure 1-1. The preliminary corridor for the road consists of a northwest-southeast segment running 51 km from the Webequie First Nation Reserve to a 56 km segment running east-west before terminating near McFaulds Lake. A total of 17 km of the corridor is within the Webequie First Nation Reserve.

Information on existing conditions is used to provide a baseline understanding of the valued components of the community. Potential effects of the Project on valued components will be assessed by comparing baseline conditions to those expected to result from the construction and operation and maintenance of the Project. This information is preliminary at this time, and it has been prepared with information that is known specifically for Aroland First Nation. This is a living draft document that has yet to be reviewed and validated by the community.

Webequie First Nation is the proponent of the Project. The Project Team led by Webequie First Nation is striving to gather Anishinaabemowin (Oji-Cree), Anishinaabe (Ojibway), Mushkegowuk (Cree), and Métis Indigenous Knowledge as it relates to the Project and to help inform the Socio-Economic Baseline. This document will be continuously updated when information from the Aroland First Nation and other communities is shared with the Project Team.

The gathering of important Indigenous Knowledge takes time due to the limited resources and capacities of communities. It is also important that culturally relevant protocols are followed. This requires relationship building and consistency to establish trust.

Webequie First Nation is an Anishinaabemowin Tawin (community) located in Treaty No. 9 territory, about 540 km north of the City of Thunder Bay. Anishinaabemowin is a blend of Anishinaabe and Mushkegowuk.

Before the first settlers arrived, the Anishinaabe and Mushkegowuk sustainably shared the territory and lived Mino Bimaadzwin (the good life) through guidance from Anishinaabe law, which governs their Kii'manitu'meano-goonan (Creator given) responsibilities to assure a good relationship with the Land (Webequie First Nation, 2021).

Generally, the Anishinaabe and Mushkegowuk shared a common spiritual view with Indigenous Nations across the continent, that is based on a profound respect for Shkagamik-Kwe (Mother Earth), which was also a relationship based on reciprocity (Thomas, 2020; Helin, 2008).

As the proponent for the Project, Webequie First Nation, like many Indigenous Nations and communities across Turtle Island (North America), have been living with the effects of colonial impositions since the arrival of Europeans to the continent and the formation of Canada. The impositions, spanning more than seven generations have had a reverberating impact on the Anishinaabemowin. These impacts should be understood while considering 'baseline' Socio-Economic data because Webequie First Nation, the proponent for the Project has been striving for Mino Bimaadzwin and to strengthen their Nation in a holistic way while reclaiming culture which feeds into baseline data as well as Aboriginal and Treaty Rights and Interests.

NOTES
DISCLAIMER

Before settlers arrived, Indigenous Nations governed themselves through their own governance structures and Natural laws. Anishinabek and Mushkegowuk governed themselves through a clan-style system, as shown on Figure 1-2.

Typically, the Anishinabek govern themselves through a clan-system which includes seven main clans with many sub-clans. Each clan has different responsibilities within the Nation at large.

Figure 1-2: Representation of the Anishinabek Dodemag (the "Clan System")

Source: Atikameksheng Anishnawbek, 2023.

Colonial impacts have been devastating in Anishinaabe and Mushkegowuk Homelands. Before the Hudson Bay Company (HBC) exploited fur-bearing animals to support trade in Europe, the people lived sustainably with the Land. Fur-bearing animals were hunted to near extinction, with the beaver population having been nearly decimated, which resulted in starvation for the people living in their homelands (SNC-Lavalin, 2022). Before that time, Anishinabek had never before been subject to a commerce style economy (SNC-Lavalin, 2022).

The *Indian Act*, implemented in 1876 had an adverse impact on Indigenous Peoples across Canada. Perhaps the most harm was done while Indigenous children were forced to attend Indian Residential Schools, which were either government run, or church run institutions.

A timeline has been developed to better understand the effects of legislation, encroachment on rights as well as reconciliation efforts, as shown in Table 1-1.

DRAFT

Table 1-1: Timeline of Effects on Indigenous Peoples of Canada from Legislation, Encroachment on Rights and Reconciliation Efforts

Timeline	Effects
Hudson Bay Company, 1670	The HBC, officially established itself in 1670 to set up trade for the fur industry (primarily beaver pelts). HBC set up its first official post in 1673 in Moose Factory, near the southern tip of James Bay and subsequently built a small outpost along the Albany River in 1743. The exploitation of animals for fur in the region resulted in a starvation crisis for the Anishinaabe and Mushkegowuk. It took the beaver population a considerable time to recover (SNC-Lavalin, 2022).
British North America Act, 1867	The *British North America Act* made the federal government responsible for Indigenous Peoples (Government of Canada, 2011).
Royal Proclamation, 1763	The Royal Proclamation of 1763 established the constitutional basis for future treaty negotiations and confirmed the protection of lands for the exclusive use by Indigenous Peoples (Hall, 2019).
Indian Act, 1876	The Indian Act: Imposed the Reserve system 1876 – ongoing. Forced attendance at Indian Residential Schools 1894 – 1996. Outlawed ceremonies: 1876 – 1951. Oppressed women's rights: 1876 – ongoing. Imposed the band council system 1876 – ongoing. 60's Scoop – Gave provinces jurisdiction to 'scoop' Indigenous children from their homes. There have been class action lawsuits to address the loss of culture and identity.
James Bay Treaty (Treaty No. 9), 1905	The James Bay Treaty (No.9) was signed with Anishinaabe, Mushkegowuk, and Anishinaabemowin. Indigenous Peoples in the territory wanted protections for lands, resources and fur-bearing animals.
The Mines Act, 1906	The Mines Act established claims staking procedures and prospectors' licenses providing exclusive rights to stake claims and work upon Crown lands.
Ontario Registered Trapline System, 1946	The Registered Trapline System imposed exclusive ownership of trapping areas, which did not align with cultural values (SNC-Lavalin, 2022).
Royal Commission on Aboriginal Peoples (RCAP), 1996	RCAP was mandated to investigate and propose solutions to the challenges affecting the relationship between Aboriginal Peoples, the Canadian government, and Canadian Society.
Truth and Reconciliation Commission of Canada (TRC), 2015	Final Report, Calls to Action, Indian Residential School settlement agreement (Truth and Reconciliation Commission of Canada, 2015).
National Inquiry into Missing and Murdered Indigenous Women and Girls, 2019	Reclaiming Power and Place: The Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls (MMIWG, 2019).

DRAFT

It is important to tell the story of Indigenous Nations in order to understand their current socio-economic conditions and Indigenous Knowledge. Part of that story includes not only the history of the Indigenous Nations, but also that of Indigenous Peoples in Canada.

COMMUNITY SETTING

DRAFT

AtkinsRéalis - Confidential

2. Community Setting

2.1 Community Overview

Indigenous communities in the Local Study Area (LSA) and Regional Study Area (RSA) for the WSR Socio-Economic Baseline are Anishiniimowin, Anishinabe and Mushkeego First Nations, and Métis Peoples. First Nation traditional territories cover the lands in the study areas. A number of First Nations in the RSA are located north of the provincial highway system, and accessible only by air, water and winter roads. Other First Nations, and the Métis community, located further south, are generally serviced by the provincial highway system. All First Nations communities are located within the Treaty No. 9 territory, except for Long Lake #58 First Nation, which lies within the geographic boundaries of the Robinson-Superior Treaty of 1850.

Aroland First Nation is located 260 km northeast of the City of Thunder Bay, 20 km west of Nakina, and 310 km south of Webequie First Nation in northern Ontario. It is situated near the southeastern shores of Wawong Lake along Highway 643, 75 km north of the Town of Geraldton within the Municipality of Greenstone. Aroland First Nation has access to the provincial highway system via an all-season road.

The community is formally affiliated with Matawa First Nations Management (MFNM), a registered not-for-profit Tribal Council (Matawa First Nations, 2020a), and the Nishnawbe Aski Nation provincial territorial organization.

Aroland First Nation has a Chief and seven Councillors, with a custom electoral system. The next election is scheduled on November 26, 2025 (CIRNAC, 2023).

2.2 Community History

Aroland First Nation was established around 1900 by community members engaged in the fur trade with the Hudson's Bay Company (HBC). Aroland First Nation is comprised of an amalgamation of members with ties to Eabametoong, Marten Falls, Ginoogaming, Long Lake #58 and Fort William First Nations (Aroland First Nation, 2022). Aroland attained reserve status on April 15, 1985. Aroland has not been given a final formal designation of reserve lands yet (Aroland First Nation, 2022).

2.3 Community Values and Aspirations

Aroland holds interests in both stewardship of its traditional lands and in fostering the social and economic well-being and resilience of its members (Aroland First Nation, 2022).

Aroland is one of 10 northern First Nations which launched a lawsuit against the Ontario and federal governments in April 2023 (McIntosh, 2023). They have requested that the Canadian government be barred from making any decisions about how land is to be used without Indigenous consent. The lawsuit centres on Treaty No. 9 and the contrast between the verbal and written promises of Treaty No. 9 as recorded (McIntosh, 2023). The Nations are arguing that they did not cede or surrender their territories and that Treaty No. 9 does not give the Ontario government the right to allow resource extraction (McIntosh, 2023).

Aroland has expressed concern and dissatisfaction with the EA/IA process for the Project. They emphasize the lack of adequate consideration given to the connectivity of Webequie First Nation and the Project to the provincial highway system, particularly the Northern Road Link Project and its potential cumulative impacts on their community and traditional territory. Aroland claims they have been excluded from the planning of these road projects, asserting their jurisdiction and the need for their valuable Indigenous Knowledge and insights to guide any road development activities in their territory (Aroland First Nation, 2020).

DRAFT

SOCIAL ENVIRONMENT

DRAFT

AtkinsRéalis - Confidential

3. Social Environment

3.1 Population and Demographics

Population and demographic data are important tools to assess socio-economic conditions in communities, as these data can identify vulnerable groups, the effects on vulnerable population groups such as women, disabled persons, Elders and youth, segments of the population that will either benefit or be negatively impacted (directly or indirectly) by the Project, and barriers to participation for local under-represented groups. The existing conditions of population and demographics are described in this section using the following indicators using Census data:

- Population overview, including gender and age;
- Indigenous identity (according to Census categories, First Nation, Métis, Inuit or non-Indigenous);
- Languages;
- Mobility and migration; and
- Immigration data is unavailable.

These indicators provide insights into existing socio-economic conditions where the Project is being considered. The information is to be used in the assessment of potential effects of the Project and to develop strategies to mitigate any negative effects.

The following section provides an overview of population and demographics at a district level.

The Thunder Bay District has the largest population of communities in the Regional Study Area (RSA) and is projected to grow between 2021 to 2043 from 146,862 to 150,498. The Thunder Bay District population identifies primarily as non-Indigenous with just 16% of the population identifies as Indigenous. Most households in the Thunder Bay District speak English in their homes. The Thunder Bay District has the highest percentage of immigrant residents in the RSA at 8%.

Aroland First Nation is one of the 72 Indigenous communities located within the Thunder Bay District.

3.1.1 Population Overview

The 2021 Census included, for the first time, a question on self-identified gender and added “at birth” to the gender question, which enabled cisgender, transgender and non-binary individuals to report their gender (Statistics Canada, 2023).

Table 3-1 presents the forecasted population of the Thunder Bay District for the period 2021 to 2043, broken down by self-identified gender. Population trends by self-identified gender in Thunder Bay District are summarized as follows:

- Over the projection period both the female and male population are forecast to increase;
- Between 2016 and 2043 the male population is forecast to increase from 72,325 to 76,553, a 5.8% increase;
- Between 2016 and 2043 the female population is forecast to increase from 73,725 to 73,995, a 0.4% increase; and
- Between 2016 and 2043, the distribution of the male population is forecasted to increase from 49.5% to 50.9% and the female population is forecast to decrease from 50.5% to 49.2%.

DRAFT

Table 3-1: Population Forecast by Self-Identified Gender, Thunder Bay District (2016, 2021, 2028, 2033, 2043)

Year	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
2016	146,050	100%	72,325	49.5%	73,725	50.5%
2021	146,860	100%	73,090	49.8%	73,775	50.2%
2028	148,002	100%	74,175	50.1%	73,845	49.9%
2033	148,822	100%	74,959	50.4%	73,895	49.7%
2043	150,478	100%	76,553	50.9%	73,995	49.2%

Source: Statistics Canada, 2017a; 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-2 presents forecasted population for the Thunder Bay District over the projection period by age group. The age groups reported are 0 -14 years, 15 – 64 years, and 65 years and over. The 15 – 64 years age group represents the potential labour force. Population trends by age group in the Thunder Bay District are summarized as follows:

- The 0 – 14 years and 15 – 64 years age groups are both forecast to decline over the projection period while 65 years and over are forecast to grow;
- Between 2016 and 2043, the 0 – 14 years age group is forecast to decrease from 21,845 to 20,709, a 5.2% decrease;
- Between 2016 and 2043, the 15 – 64 years age group is forecast to decrease from 95,930 to 81,584, a 15% decrease; and
- Between 2016 and 2043, the 65 years and over age group is forecast to increase from 28,270 to 56,522, a 99.9% increase.

Table 3-2: Population Forecast by Age Group, Thunder Bay District (2016, 2021, 2028, 2033, 2043)

Year	Total		0 to 14 years		15 to 64 years		65 years and over	
	Count	Distribution	Count	Distribution	Count	Distribution	Count	Distribution
2016	146,045	100%	21,845	15%	95,930	66%	28,270	19%
2021	146,865	100%	21,630	15%	93,095	63%	32,140	22%
2028	149,063	100%	21,333	14%	89,266	60%	38,464	26%
2033	151,480	100%	21,123	14%	86,628	57%	43,729	29%
2043	158,814	100%	20,709	13%	81,584	51%	56,522	36%

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

DRAFT

3.1.2 Indigenous Identity

Table 3-3 presents the population of the Thunder Bay District by Indigenous identity in 2021. Indigenous identity of the Thunder Bay District population is summarized as follows:

- 84.1% of the population identifies as non-Indigenous; and
- The majority of the population that identifies as Indigenous identifies as First Nations at 12.6% of the population, followed by Métis (3.3%). No respondents identified themselves as Inuit.

Table 3-3: Population Forecast by Self-Identified Indigenous Population, Thunder Bay District (2021)

Indigenous Identity	Count	Distribution
First Nations	18,115	12.6%
Métis	4,690	3.3%
Inuk	30	0%
Non-Indigenous	121,000	84.1%
Total	**143,835**	**100%**

3.1.3 Languages

Table 3-4 presents the languages spoken most often in the home within the Thunder Bay District in 2021. Languages spoken by the Thunder Bay District population in 2021 are summarized as follows:

- The majority of homes in the Thunder Bay District speak English while at home at approximately 96%;
- Indigenous languages are spoken most often at home in 0.3% of homes; this category includes 39 Indigenous languages; and
- French and other non-official languages make up the remaining 3.8% of homes at 2.9% and 0.9%, respectively.

Table 3-4: Language Used Most Often at Home, Thunder Bay District (2021)

Language	Count	Distribution
English	137,220	95.9%
Other Non-Official Languages	4,130	2.9%
Indigenous Languages	1,350	0.9%
Total	**375**	**0.3%**

3.1.4 Mobility and Migration

Table 3-5 below presents the mobility status of Thunder Bay District residents in 2020. Mobility status refers to the status of a person's place of residence on Census Day in relation to their place of residence on the same date 1 or 5 years earlier (Statistics Canada, 2022a).

Residents are categorized as "non-movers" or "movers". Persons who, on Census Day, lived in the same residence as they did on the same date 1 year or 5 years earlier are referred to as non-movers, and persons who, on Census Day, did not live in the same residence as they did 1 year or 5 years earlier are referred to as movers. Movers include non-migrants, migrants, internal migrants, and external migrants. Mobility status of residents of Thunder Bay District is summarized as follows:

- 89.2% of residents were identified as "non-movers", 49.8% (63,510) of which were male and 50.2% (64,125) female; and
- "Movers" accounted for 10.8% of the population, 50.1% (7,775) of which were male and 49.9% (7,750) female.

DRAFT

Table 3-5: Mobility Status of Residents, Thunder Bay District (2020)

Mobility Status	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
Non-movers	127,640	89.2%	63,510	89.1%	64,125	89.2%
Movers	15,525	10.8%	7,775	10.9%	7,750	10.8%

3.2 Housing and Accommodations

Housing and accommodations is an important issue in particular for Indigenous people. In 2021, it was reported that one in five First Nations people (21.4% or 224,280 people) in Canada consider their household to be crowded (Statistics Canada, 2022a). This problem is primarily due to houses not having enough rooms for families and multiple generations of families living in the same household. Furthermore, many houses on First Nation reserves are in poor condition and require major repairs.

The following section provides an overview of population and demographics at a district level.

In general, the Thunder Bay District has 72,510 dwellings, 89% of which are occupied by usual residents. A private dwelling occupied by usual residents refers to a private dwelling in which a person or a group of persons is permanently residing (Statistics Canada, 2022a). Across the District, approximately 72% of homes are owned, and the remainder are rented. Under 2% of dwellings are considered government or Band housing. Over 60% of the dwellings are occupied by 1 to 2 persons and 30% have 8 or more rooms. Less than 10% of dwellings have been constructed over the past two decades. Nearly all dwellings are considered suitable based on household size and less than 10% are in need of major repairs.

The following sections provide information that will enable the assessment of effects on housing and accommodations at the District level, by using the following indicators:

- Housing characteristics;
- Household characteristics; and
- Housing condition.

DRAFT

These indicators help with understanding existing socio-economic conditions of the community and predict potential effects of the Project on the community's quality of life.

3.2.1 Housing Characteristics

Figure 3-1 presents the total private dwellings and private dwellings occupied by usual residents in the Thunder Bay District for 2021. Private dwelling occupied by usual residents refers to a private dwelling in which a person or a group of persons is permanently residing (Statistics Canada, 2019). Information on private dwellings in 2021 is summarized as follows:

- There are 72,510 total private dwellings in the Thunder Bay District as of 2021; and
- Of the 72,510 private dwellings, 64,601 (89.1%) are occupied by usual residents.

Figure 3-1: Thunder Bay District – Total Private Dwellings and Occupied Private Dwellings, 2021

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-7 below presents the total number of occupied dwellings for the Thunder Bay District by structure type in 2021. Structure type of occupied dwellings is summarized as follows:

- The majority of occupied dwellings are classified as a single-detached home at 71.6%;
- Apartments make up 21% of occupied dwellings. Apartments include the following categories: apartments in a building that has less than five storeys, apartment or flat in a duplex, and apartments in a building that has five or more storeys; and
- The smallest category of occupied dwellings is other single-attached houses with 0.2%.

DRAFT

Table 3-7: Total Occupied Private Dwellings by Structural Type in Thunder Bay District (2021)

Structural Type	Count	Distribution
Single-detached house	46,220	71.6%
Semi-detached house	8,495	13.2%
Row house	2,575	4%
Apartment or flat in duplex	2,500	3.9%
Apartment in a building that has fewer than five storeys	2,290	3.5%
Apartment in a building that has five or more storeys	1,715	2.7%
Other single-attached house	660	1%
Moveable dwelling	140	0.2%
Total	**64,595**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-8 below presents the number of private dwellings by tenure (owned, rented, or government/band housing) for Thunder Bay District in 2021. Tenure of dwellings is summarized as follows:

- The majority of the private dwellings in the Thunder Bay District are owned at 72% followed by rented at 26.7%; and
- 1.3% of private dwellings are considered to be provided by the local government or band housing.

Table 3-8: Private Dwellings by Tenure in Thunder Bay District (2021)

Tenure	Count	Distribution
Owner	46,135	72.0%
Renter	17,135	26.7%
Dwelling provided by the local government, First Nation or Indian band	805	1.3%
Total	**64,075**	**100%**

DRAFT

3.2.2 Household Characteristics

The following subsections describe characteristics of households (i.e., occupied private dwellings) for Thunder Bay District. Table 3-9 below presents the total number of households by household size (i.e., the number of people per household) in Thunder Bay District in 2021:

- The majority of households are occupied by two persons at 36%; and
- The least number of households are occupied by five or more persons at 6%.

Table 3-9: Number of Households by Household Size in Thunder Bay District (2021)

Household Size	Count	Distribution
1 person	21,265	33%
2 persons	23,555	36%
3 persons	8,885	14%
4 persons	7,185	11%
5 persons or more	3,715	6%
Total	**64,605**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-10 below presents the number of rooms per household in Thunder Bay District in 2021:

- The majority of households in the Thunder Bay District consist of 8 or more rooms at 29.1% followed by 1 to 4 rooms at 23%; and
- The least number of households are comprised of 7 rooms at 14.1%.

Table 3-10: Number of Households by Number of Rooms per Household in Thunder Bay District (2021)

Household Size	Count	Distribution
1 to 4 rooms	14,860	23.0%
5 rooms	10,945	16.9%
6 rooms	10,835	16.8%
7 rooms	9,135	14.1%
8 or more rooms	18,825	29.1%
Total	**64,600**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

3.2.3 Housing Conditions

The following subsections describe housing conditions including the number of occupied private dwellings built during various periods of construction from 1960 up to 2021, as well as the suitability and condition of dwellings for Thunder Bay District.

Table 3-11 below presents the total number of occupied private dwellings by period of construction from 1960 up to 2021 in Thunder Bay District:

- Dwellings constructed during the period of 1960 or before is the largest group with 35.3% of private dwellings being built during this period;
- The four periods covering 2001 to 2021 are nearly evenly distributed and comprise 9.7% of occupied private dwellings;
- 90.3% of the occupied private dwellings in the Thunder Bay District were constructed during or prior to 2000; and
- Over the last two decades, 6,290 dwellings were constructed which accounts for less than 10% of the occupied housing stock.

Table 3-11: Occupied Private Dwellings by Period of Construction in Thunder Bay District (2021)

Construction Period	Count	Distribution
1960 or before	22,790	35.3%
1961 to 1980	21,420	33.2%
1981 to 1990	7,930	12.3%
1991 to 2000	6,165	9.5%
2001 to 2005	1,625	2.5%
2006 to 2010	1,575	2.4%
2011 to 2015	1,570	2.4%
2016 to 2021	1,520	2.4%
Total	**64,595**	**100%**

Source: Statistics Canada, 2022a.

DRAFT

Table 3-12 below presents the suitability of occupied private dwellings in Thunder Bay District in 2021. Dwellings are categorized as either “suitable” or “unsuitable”. Housing suitability assesses the required number of bedrooms for a household based on the age, sex, and relationships among household members according to the National Occupancy Standard (Statistics Canada, 2017b).

- In 2021, 3.2% of the occupied private dwellings in the Thunder Bay District were categorized as unsuitable.

Table 3-12: Occupied Private Dwellings by Suitability in Thunder Bay District (2021)

Suitability	Count	Distribution
Suitable	62,560	96.8%
Not suitable	2,040	3.2%
Total	**64,600**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-13 below, presents the condition of private dwellings in Thunder Bay District in 2021. Dwellings are categorized as either “only regular maintenance and minor repairs needed” or “major repairs needed”. Dwelling condition refers to whether the dwelling is in need of repairs. This does not include desired remodelling or additions.

The 'regular maintenance needed' category includes dwellings where only regular maintenance such as painting or furnace cleaning is required. The 'minor repairs needed' category includes dwellings needing only minor repairs such as dwellings with missing or loose floor tiles, bricks or shingles; or defective steps, railing or siding. The 'major repairs needed' category includes dwellings needing major repairs such as dwellings with defective plumbing or electrical wiring; and dwellings needing structural repairs to walls, floors or ceilings (Statistics Canada, 2021).

- In 2021, 8.7% of occupied private dwellings in the Thunder Bay District were categorized as requiring major repairs.

Table 3-13: Occupied Private Dwellings by Dwelling Condition in Thunder Bay District (2021)

Dwelling Condition	Count	Distribution
Only regular maintenance and minor repairs needed	58,965	91.3%
Major repairs needed	5,640	8.7%
Total	**64,605**	**100%**

DRAFT

3.3 Community Services

Community services in Aroland First Nation are described in this section using the following indicators:

- Demand for community services; and
- Supply and capacity of community services.

These indicators were selected to provide an understanding of the community services that currently exist and the community services essential for the community (e.g., health care). Community Services information for Aroland First Nation has been collected principally from online sources, such as 211 Ontario North (211north.ca), an information portal which provides information on social, community, health and government services in northern Ontario.

3.3.1 Family Services

Family Services

Tikinagan is a social services organization that provides child and family services for Aroland First Nation. It is the largest provider of residential services in Ontario, with a service area that is approximately one third of the province of Ontario, servicing 30 First Nations communities (Tikinagan Child & Family Services, 2023a). In January 2020, Tikinagan was designated by the Ministry of Community and Social Services and the Aroland Council to provide child protection services to the families who reside in the District of Thunder Bay (Tikinagan Child & Family Services, 2023a).

Tikinagan was created to provide culturally-specific child and family services, that emphasize Indigenous culture as part of its child welfare support work. Prior to Tikinagan, support services for children and families were generally provided from outside First Nations communities. There were reports of harms inflicted from this approach (Tikinagan Child & Family Services, 2023b).

Services are culturally responsive and supportive of traditional values and customs. The model of “Mamow Obiki-ahwahsoowin” mandates that in all aspects of service delivery, workers are expected to consult with Elders of the community for wisdom, guidance, and teachings, and to receive direction on service delivery (Tikinagan Child & Family Services, 2023c). This specifically includes the requirement to consult with First Nations leadership on case management decisions.

An overall goal of the support work by Tikinagan is to keep children at home, and in their home communities. When necessary, foster homes for children in need are located in the child’s community or a nearby community, in order to reduce the distance from home and family.

The Mamow Obiki-ahwahsoowin model mandates that authority rests with the Chief and Council to declare that children be placed in Tikinagan care (Tikinagan Child & Family Services, 2023ac).

Family Well-Being Program

The Family Well-Being Program is a Nishnawbe Aski Nation initiative that aims to support each Indigenous community in designing and delivering their own comprehensive and culturally appropriate services and programs to promote community health and family well-being. The program focuses on empowering families to build healthy relationships and improve the overall health of communities. Its activities and programs include revitalizing Native languages, preventing and intervening in alcohol and drug abuse, organizing community events such as feasts, facilitating family circles, counselling, and child/ youth support groups, providing referrals to other programs and services, offering school programs, and conducting traditional land-based healing events. The program works towards eliminating family violence, reducing the number of youths involved in the justice system, and decreasing the number of children in care (211 Ontario North, Aroland First Nation, 2023a).

3.3.2 Child Care and Youth Programs

Healthy Babies Healthy Children

The Healthy Babies Healthy Children program aims to support parenting and promote healthy child development for Aroland First Nation families with children under 6 years old, as well as Indigenous children at risk. The program provides group information and educational sessions on topics related to healthy pregnancy, birth, and taking care of babies at home. It also offers a handbook on pregnancy and baby care, organizes prenatal classes, and operates a children’s library to encourage child literacy. Program participants receive follow-up via telephone within 48 hours of discharge from the hospital and home visits pre- and post-birth to offer support to new mothers and prepare the family for the new arrival. The program also provides home visits during the child’s early years to offer development guidance and referrals to other programs and services (211 Ontario North, Aroland First Nation, 2023b).

DRAFT

3.3.3 Elder Care

Elder Care

Indigenous Services Canada, through the First Nations and Inuit Home and Community Care (FNIHCC) program, provides funding and guidance for Elder care. This program aims to establish home and community care services for Indigenous individuals residing in First Nations and Inuit communities (Indigenous Services Canada, 2023). It encompasses First Nations individuals living on reserves who have been assessed as requiring one or more services.

The FNIHCC program prioritizes various services, including client needs assessment, case management, and care coordination. It also covers in-home respite care, temporary care, nursing care planning, and personal care management. Health centres like the Sioux Lookout First Nations Health Authority play a crucial role in delivering in-community healthcare services. (Indigenous Services Canada, 2023).

3.3.4 Health Services

3.3.4.1 Matawa Regional Crisis Intervention Program

The Matawa Regional Crisis Intervention Program provides free, confidential crisis support and follow-up for Matawa members regardless of residence on a 24 hour/7 day a week basis. Translation services are also provided. The program also provides the following (Matawa First Nation, 2023a):

- Crisis assessment/intervention;
- Crisis counselling/de-briefing;
- Outreach calls through Nodin counselling services;
- Support to family and friends;
- Referrals to professionals;
- Case management/review.
- Community awareness/healing plans.

3.3.4.2 Matawa Safe Sobering Site

The Matawa Safe Sobering Site provides intoxicated youth between the ages of 13 and 21, with a safe, home-like environment to become stabilized before being referred for further mental health or addictions programming.

The 4-bed site is available to Matawa students on a 24 hour/7 day a week basis. Transportation is available to and from the site if needed, through Matawa On-Call Student Services (8pm to 6am daily) (Matawa First Nation, 2023a).

Services provided include:

- Safe and supervised detoxification and stabilization support.
- In-House Addictions Crisis Worker and Youth Residential Worker to provide immediate crisis assessment and intervention.
- Referrals to St. Josephs Care Group for addictions case-management and after-care planning.
- After-care planning and referrals to other community- based programs as needed.

3.3.4.3 Health Services

Health Services are dedicated to promoting the physical and mental well-being of the community. The Aroland Health Centre coordinates health care services provided by visiting health professionals such as home care and community health nurses, nurse practitioners, foot care nurse and diabetes educator at the Aroland Health Centre. The Centre provides health awareness and counselling, education, and prevention workshops. It also coordinates clinics in areas that may include Immunization, Sexual Health, and Communicable Diseases.

DRAFT

The Health Centre addresses individual health care needs by providing advocacy on behalf of individuals with other health professionals, coordinating one-on-one pre-natal care with the community health nurse, home visits to the sick, Elders, new mothers and persons with health care needs. It also provides assistance with coordinating local and long-distance travel arrangements for medical appointments (211 Ontario North, Aroland First Nation, 2023c).

3.3.4.4 National Native Alcohol and Drug Abuse Program

The National Native Alcohol and Drug Abuse Program aims to provide assistance and support to individuals and families in Aroland First Nation who are struggling with addiction issues. This program offers AA and NA meetings and provides transportation to all meetings and workshops upon request. To prevent addiction, the program also holds public seminars and meetings, educational sessions in schools, and coordinates cultural and spiritual events. The intervention program facilitates recreational activities, provides individual and group discussions, and offers cultural and spiritual gatherings. Aftercare is also provided through counselling, sharing circles, and support groups, as well as regular phone calls and home visits, and referrals to other services such as detoxification and medical assistance (211 Ontario North, Aroland First Nation, 2023d).

3.3.4.5 Extended Health Benefits
