McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team, sent an email to Metis Nation of Ontario - Region 2's (MNOR2) Nick Richards which included a letter and English WSR Newsletter - Issue 18. The letter included a follow-up to the community regarding the package sent by the WSR team on October 28, 2022, containing the Consultation Progress Report for Round 1. The letter also provided an overview of the report with key milestones and topics that were covered in Round 1 of consultation as well as various community engagement options to help create awareness of the Project in the community.

Attached to the email was also the English WSR Newsletter - Issue 18 which provided information about Consultation Round 2 topics as well as fish and fish habitat baseline study findings. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael, Don Parkinson of SNC-Lavalin, and Leslie Spence the WSR Local Coordinator provided their email address and phone number if MNOR2 has any questions or comments.

Topics to be Discussed: ATRI Forum Invitation Follow Up
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Nick Richards of Métis Nation of Ontario - Region 2 (MNOR2) to follow up on the invitation for the Aboriginal and Treaty Rights and Interests (ATRI) Forum hosted by the Province of Ontario in Thunder Bay on February 8 & 9, 2023. The email explained that it is not too late to RSVP for the event. Attached to the email was the poster which explained that the 2-day forum will focus on discussing potential impacts to Northern Indigenous Communities ATRI as they relate to the WSR, Northern Road Link (NRL), and Marten Falls First Nation Community Access Road (MFCAR) Projects. The poster provided more information on how community representatives can attend, the purpose of the forum, who should attend from each community, and an email address for the community to RSVP. A preliminary agenda was also included on the poster. The Province of Ontario, Michael Fox of WSR, Andrea Nokleby of MFCAR, and Mishal Naseer of NRL provided their emails on the poster for further information if MNOR2 has any questions or comments.

McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent an email to Métis Nation of Ontario - Region 2 (MNOR2)'s Nick Richards which included a letter and poster advising that the WSR Project Team is hosting a Wawatay radio session from 12:00pm-1:00pm EST and livestream from 2:00pm-2:30pm EST on March 14, 2023. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on an overview of the Alternatives Assessment Process, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team will begin Virtual Information Sessions for Round 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if MNOR2 has any questions or comments.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Métis Nation of Ontario - Region 2 (MNOR2)'s Nick Richards, with a letter inviting the community's participation in the Socio-Economic Primary Data Collection Program as part of the WSR Environmental Assessment/Impact Assessment (EA/IA). The letter was a follow-up to the letter sent on December 20, 2021, which outlined the purpose of the socio-economic study, types of information that the Project team wants to gather, and suggested primary data collection methods. The letter explained that the Project team has a timeframe for the EA/IA process to complete the studies and document the results, and the goal for the year is to complete a Draft Socio-Economic Existing Conditions Report. The letter explained that the Project team would like to collaborate with the community to discuss and collect socio-economic information and/or verify information gathered to-date based on current research to help understand existing social and economic conditions. The letter provided an overview of the preliminary Valued Components for the EA/IA to represent aspects of social and economic conditions that are important to the community which require information gathering. The letter requested an indication of MNOR2's interest in participating in the Socio-Economic Primary Data Collection Program by April 17, 2023, because it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by June 16, 2023.

Topics to be Discussed: Virtual Information Session
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Metis Nation of Ontario - Region 2's (MNOR2) Nick Richards, with a letter and poster advising that the WSR Project Team is hosting a virtual information session for MNOR2 on May 23, 2023, between 2:00-3:00pm EST with registration links for the session. The information session will include a presentation on WSR's Environmental Assessment / Impact Assessment activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter also included information on the Virtual Reality (VR) Open House where community members can access further information about the project and provide comments. The letter indicated that the WSR Project Team is available for additional engagement sessions and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if MNOR2 has any questions or comments.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Metis Nation of Ontario - Region 2 (MNOR2) on May 23, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, the Project Team played a voiceover presentation which included a testimony by the Webequie First Nation Chief Wabasse and information on WSR's Environmental Assessment / Impact Assessment (EA / IA) activities including alternative assessment methodology and results, valued components, preferred alternative and consultation approach and next steps. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community members. The Project Team informed the audience that a recording of the session will be made available through YouTube and the WSR Website for viewing. The team also informed the audience of the upcoming radio and livestreaming events the following day. There were no attendees present at this session.

Topics to be Discussed: ATRI Forum Follow Up
Andrea Nokleby of Dillon Consulting sent an email on behalf of Marten Falls First Nation Community Access Road (MFFN CAR), Webequie Supply Road (WSR), and Northern Road Link (NRL) Project Teams to thank Eric Reimer and Victoria Stinson of Métis Nation of Ontario - Region 2 (MNOR2) and representatives who attended the Aboriginal and Treaty Rights (ATRI) and Forum that was hosted in Thunder Bay on February 8th and 9th 2023. Michael Fox of Indigenous and Community Engagement (ICE) and the WSR Project team were copied on the email. The Forum focused on discussing potential impacts to Northern Indigenous communities' Aboriginal and/or Treaty Rights and Interests as they relate to the MFFN CAR, WSR and NRL projects. The email contained attachments with information including: (1) a thank you note to all participants; (2) a general summary of ATRI comments; and (3) community-specific summaries from the breakout sessions. The email indicated that any comments or questions about the attached information is welcomed and that representatives on the project teams would be happy to set up additional meetings to further discuss any aspects of the projects, including MNOR2's ATRI as they relate to each project. The email also indicated that each Project team would be following up separately on any project-specific correspondence.

Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent a fax to Métis Nation of Ontario - Region 2 (MNOR2)'s Nick Richards which included a letter, and poster advising that the WSR Project Team is hosting a Wawatay radio session from 12:00pm-1:00pm EST and livestream from 2:00pm-2:30pm EST on July 18, 2023. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on Road Foundation Design, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 Part 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if MNOR2 has any questions or comments. Fax transmittal error: fax failed.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Métis Nation of Ontario - Region 2 (MNOR2) on August 1, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. The meeting began with a video of Chief Wabasse discussing the importance of the project to the Webequie Community. Don Parkinson explained that the Part 2 of Consultation Round 2 will discuss the Project team’s work on the evaluation of alternatives for supportive infrastructure which includes aggregate rock sources for pits and quarry access roads and construction camps. Don presented information on how various factors were evaluated to produce preferred options based on a lower score. Don also explained the various engineering structures such as culverts, bridges, access roads etc. in detail and shared graphics illustrating what the proposed structures would look like after completion. The WSR Project Team had a platform which provided a real-time translation of the session in Oji-Cree. No participants from MNOR2 were in attendance. Jennifer reiterated that the Project Team would like to hear from MNOR2 community members in-person and that a recording of the session would be available through YouTube and the WSR Website.

Topics to be Discussed: WSR Consultation Progress Report Round 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Métis Nation of Ontario - Region 2's (MNOR2) Nick Richards which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 2. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 2. The letter explained that the Consultation Progress Report summarizes the documents from Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025 and provided a list of topics and milestones which are proposed to be addressed as part of the engagement and consultation activities for Round 3. Michael's email and cell phone contact information was provided if MNOR2 has any questions or comments.

Topics to be Discussed: WSR Newsletter - Issue 32, Consultation Progress Report Round 2, Upcoming Livestream and Radio Show
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a fax to Métis Nation of Ontario - Region 2's (MNOR2) Nick Richards, with a letter and poster attached. The letter explained that the WSR Project team mailed a package containing the Consultation Progress Report for Round 2 (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter provided the status of delivery as of March 27, 2024. An overview of the Consultation Progress Report for Round 2 was provided and the letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on April 1, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on Aquatic Habitat Preliminary Findings, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if MNOR2 has any questions or comments.

The fax also included the English WSR Newsletter – Issue 32 which provided information about the topics for consultation round 3, road foundation design, and radio shows and livestream schedule for April 2024. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael and Don Parkinson of AtkinsRéalis provided their email address and phone number if MNOR2 has any questions or comments.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Carolina Montrose and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Nick Richards of Métis Nation of Ontario - Region 2 with an attached invitation for the Three Road Project Gathering & Expo hosted by Webequie First Nation (WFN) and Marten Falls First Nation (MFFN), The invitation noted that the event was funded by the Province of Ontario, our Treaty Partner and that it would be held in Thunder Bay on June 11-13, 2024. The invitation also noted the need to continue the momentum of the last two gatherings which focused on Aboriginal and/or Treaty Rights and Interests. In addition, the invitation notes that the Gathering & Expo will provide participants with an engaging and interactive space for consultation to learn more about the projects, ask questions, and share feedback focusing on water, peatlands and building roads on peatlands. Day 1 will be specifically for an Elders gathering, providing a comfortable space for Elders to gather and discuss the Projects. The invitation provided funding information and an email address to access the funding.

Topics to be Discussed: Virtual Information Session Round 3 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team held a virtual session as part of Consultation Round 3 for the Métis Nation of Ontario – Region 2 (MNOR2). An Oji Cree translator provided real-time translation of all meeting content. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 3 Part 1 presentation that began with a review of the project to date, followed by a discussion of preliminary results for two valued components: surface water and fish and fish habitat. Participants were informed that the unabridged version of the presentation was available on the website and that this version reported preliminary results for several other valued components. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No Participants from MNOR2 were in attendance.

Topics to be Discussed: Field Notice Fall Geo-Technical Drilling Program
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Métis Nation of Ontario - Region 2's (MNOR2) Nick Richards regarding a Field Notice for the Fall geo-technical drilling program. The email indicated that AtkinsRéalis is providing a notification to complete a drilling program for the WSR project to further engineering design and support the coordinated provincial Environmental Assessment and Federal Impact Assessment. The letter is intended to provide notice as required by Land Use Permits pending issuance by the Ministry of Natural Resources (MNR). The email indicated that all works will be conducted in accordance with the permit conditions issued by MNR. Attached to the email was the Field Notice explaining what is happening, the schedule and what to expect. For further questions, the contact information for Hayden Yip of AtkinsRéalis was provided.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Métis Nation of Ontario - Region 2's (MNOR2) Nick Richards with a letter attached to the email regarding the planned early circulation of the draft Environmental Assessment Report / Impact Statement (EAR/IS). The letter advised that the Project team is planning an early circulation of the draft EAR/IS to provide the opportunity for MNOR2 to review the draft EAR/IS prior to its release to stakeholders and the public for formal review. The letter explained that the team anticipates the draft EAR/IS to occur in late fall or early winter of the fiscal year 2024/2025 which will provide communities with an extended review period of 60-days to provide their review and comments. The letter explained that the team would follow up with the community as the project moves closer to the circulation of the draft EAR/IS, including the community would like to receive the document (electronic and/or hard copy). Michael provided his contact information for any questions or comments.

Topics to be Discussed: Consultation Progress Report Round 3
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Métis Nation of Ontario - Region 2's (MNOR2) Nick Richards which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 3. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 3. The letter explained that the Consultation Progress Report summarizes the documents from Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that next steps will involve engagement and consultation options for communities to review assessment findings in the draft Environmental Assessment Report / Impact Statement, including targeted sessions with Indigenous communities for feedback and input on the results of the cumulative effects assessment for the Project. The letter noted that the future engagement and consultation sessions for communities are tentatively scheduled to start in Winter 2024/2025. Michael's email and cell phone contact information was provided if MNOR2 has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 4 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team conducted a virtual community meeting on the Zoom platform with Métis Nation of Ontario - Region 2 (MNOR2). The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 4 Part 1 presentation that began with a review of the project to date, followed by a discussion of the process of effects assessment, then an explanation of cumulative effects and how they are determined and managed. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from MNOR2 were in attendance.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Ian Frederickson and Michael Fox of Indigenous and Community Engagement (ICE) and the?Webequie?Supply Road (WSR) Project team sent an email to Consultation Advisor Nicholas Richard of the Métis Nation of Ontario - Region 2 with links to?invitations for the Three Road Project Gathering & Expo hosted by ?Webequie?First Nation (WFN) and Marten Falls First Nation (MFFN) with support from the Province of Ontario. The email noted that the gathering will provide an engaging and interactive consultation space to discuss the WSR draft EAR/IS, Marten Falls Community Access Road draft EAR/IS, and Northern Road Link Projects. The invitation provided the dates and locations for the events in Thunder Bay and Timmins: February 19-20, 2025, at the Valhalla Inn Hotel in Thunder Bay, and February 25-26, 2025, at the Cedar Meadows & Spa in Timmins. A general summary of event highlights was provided along with information about funding and attendance. The invitation asked the community to RSVP by January 31, 2025, to the Province of Ontario's email address provided?to reserve accommodations. The invitation noted that the event aims to?foster an understanding of the three road projects and their potential impacts while creating a collaborative space for consultation. For further questions regarding funding inquiries or additional details, the Province of Ontario's email address was provided.?

Topics to be Discussed: Winter 2025 Field Notice
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) sent an email to Métis Nation of Ontario - Region 2's (MNOR2) Chief Nick Richards with a winter field notice attached. The field notice indicated that field work has been scheduled to take place from February 19-March 1st, 2025 to manually remove caribou GPS radio tracking collars. The notice indicated that the collars were placed on the caribou to gather data on their populations, migration patterns, and habitat use. Following three years of data collection, the collars were set to automatically release in February 2024, however not all collars released as intended. The notice explained that a specifically trained team will manually remove collars without harming the animal. The notice also provided information on what to expect and where the team may need to travel but noted that the field team may need to travel outside the study area boundaries. A map was provided on the second page of the notice.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Ian Frederickson and Michael Fox of Indigenous and Community Engagement (ICE) and the?Webequie?Supply Road (WSR) Project team sent an email to Consultation Advisor Nicholas Richard of the Métis Nation of Ontario - Region 2 with links to?invitations for the Three Road Project Gathering & Expo hosted by ?Webequie?First Nation (WFN) and Marten Falls First Nation (MFFN) with support from the Province of Ontario. The email noted that the gathering will provide an engaging and interactive consultation space to discuss the WSR draft EAR/IS, Marten Falls Community Access Road draft EAR/IS, and Northern Road Link Projects. The invitation provided the dates and locations for the events in Thunder Bay and Timmins: February 19-20, 2025, at the Valhalla Inn Hotel in Thunder Bay, and February 25-26, 2025, at the Cedar Meadows & Spa in Timmins. A general summary of event highlights was provided along with information about funding and attendance. The invitation asked the community to RSVP by January 31, 2025, to the Province of Ontario's email address provided?to reserve accommodations. The invitation noted that the event aims to?foster an understanding of the three road projects and their potential impacts while creating a collaborative space for consultation. For further questions regarding funding inquiries or additional details, the Province of Ontario's email address was provided.?

Topics to be Discussed: Virtual Information Session Round 4 Part 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Métis Nation of Ontario - Region 2's (MNOR2) Chief Nick Richards, with a letter and poster advising that the WSR Project Team is hosting a virtual information session for Round 4 Part 2 for MNOR2 on February 24, 2024, from 2:00-2:45pm EST with registration links for the session. The information session will include the second presentation on WSR's Cumulative Effects Assessment. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter also included information on the Virtual Reality (VR) Open House where community members can access further information about the project and provide comments. The letter indicated that the WSR Project Team is available for additional engagement sessions and provided a list of engagement options. The letter also attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if MNOR2 has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 4 Part 2
The Webequie Supply Road consultation team conducted a virtual community meeting on the Zoom platform with Metis Nation of Ontario - Region 2 (MNOR2). The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 4 Part 2 presentation that began with a review of the project to date, followed by a discussion of the process of effects assessment. After the effects assessment discussion, potential effects and associated mitigation measures were explained using examples from geology, terrain and soils and fish and fish habitat. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from MNOR2 were in attendance.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Nicholas Richards of Métis Nation of Ontario - Region 2 (MNOR2) with an attached letter regarding early circulation of the Draft Environmental Assessment Report / Impact Statement (Draft EAR/IS) for Review for the WSR Project. The letter advised the community that the Draft EAR/IS is now available for the community to review. The letter provided an overview of what is documented in the Draft EAR/IS and explained that it is being circulated in two stages to provide communities with an extended review period to provide comments on the document for a total of 120 days. The two stages of circulation are: 1) Early access for Indigenous communities from June 9 to October 7, 2025, and 2) Public and Stakeholders from August 8 to October 7, 2025. The letter explained that enclosed in the package is the Draft EAR/IS for the WSR Project for review which includes: One hard copy of the main body of the Draft EAR/IS, an electronic copy of the Draft EAR/IS and Appendices, and one hard copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree, and Cree. The letter also provided a link to the Draft EAR/IS on the Project website. The letter also noted that the draft Record of Consultation and Engagement with Indigenous communities, public, and stakeholders is not included in the Draft EAR/IS, but will be provided to the community when the Draft EAR/IS is released for public and stakeholder review on August 8, 2025. In the interim, consultation and engagement activities received from the communities is documented in the Consultation Progress Reports for Rounds 1, 2, and 3, previously sent to the community at key milestones in the EA/IA process, and can also be found on the Project website. The letter encouraged the community to actively participate in the review of the Draft EAR/IS and provided an email and/or mailing addresses to submit comments. For any questions or to schedule a meeting with the Project Team, Michael also provided his email and phone number.

November 22, 2021

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment studies. This upcoming week, **WSR Presents: Caribou and Wolverine/Wildlife and Wildlife Habitat/Species at Risk/Breeding Birds.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 23rd at 2:00-3:00 (EST)**. We encourage you and your community members to listen, for this will give your community membersthe opportunity to ask questions. You may call during the radio show at the **toll-free number:1-844-424-0500.**

In addition, the live streaming event is scheduled on the same day as the above radio show at **4:00pm – 4:30pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. All sessions are recorded and accessible on YouTube, you can subscribe at: Webequie Supply Road - YouTube. We have regular updates on our Facebook page that features community photos, informative videos, Frequently Asked Questions along with project information. You can follow WSR on Facebook at Supply Road | Facebook, Twitter, Instagram and http://www.linkedin.com/company/wfnsupplyroad You may also call with questions on the same toll-free number provided above during the live streams.

The WSR Project Team is offering opportunities of engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the WSR Project.

Engagement Options

Method	Description
Focus Group Sessions	With proper Covid-19 protocols in place, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment studies. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse groups(women, elders, youth, land users, etc.)
Community Sessions	With proper Covid-19 protocols in place, community information sessions can be conducted, whereby the WSR Project Team will discuss the Environmental Assessment process with a question-and-answer period at the end of the presentation.
Drop-in Sessions	With proper Covid-19 protocols in place, community members can drop-in at a safe location todiscuss the Environmental Assessment process with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment process facilitated by the WSR Project Team using Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the Environmental Assessment process to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the Environmental Assessment studies presentation and set up a conference call number to go through the presentation based on the area of interest your team wants to focus on and answer any questions.
Local Radio Call In Show	Using the local community radio, the WSR can present the Environmental Assessment studies with a local translator that the WSR will pay for and explain the Environmental Assessmentprocess. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the Environmental Assessment process.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching the WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, then we can mail these hardcopy WSR poster to your community for local distribution and all you need to do is email or call us to inform us that you need hardcopies of WSR poster.

Lastly, given the high and daily usage of social media channels by Indigenous leaders and members, you, your Council, and your staff can also follow us on Facebook, Twitter, Instagram, and LinkedIn to stay updated and repost it on your social media accounts to assist in information access, information dissemination, and information request associated with the WSR Project's environmental studies.

To obtain information on the Project, or to provide comments, please visit our website at http://www.supplyroad.ca or contact me at 807-472-6147.

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road
michael.fox@supplyroad.ca

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Web-Preliminary Study Areas for Indigenous Land Use and Interests-2021-12-13

INDIGENOUS KNOWLEDGE / INDIGENOUS LAND AND RESOURCE USE PROGRAM FOR THE WEBEQUIE SUPPLY ROAD PROJECT

Information Sharing Agreement

Purpose

The purpose of the Indigenous Knowledge and Land and Resource Use (IKLRU) Program Sharing Agreement is to:

- Document the shared understanding of how the Métis Nation of Ontario - Region 2 IKLRU Study for the Webequie Supply Road Project will be completed;
- Document the anticipated activities that will be part of the IKLRU Program; and
- Document how IKLRU information will be integrated into the Environmental Assessment Report (EAR) / Impact Statement (IS).

Confidentiality and IK / TLU Sharing

- Webequie First Nation acknowledges that all IKLRU information is the property of Métis Nation of Ontario - Region 2 and the individual knowledge holders who contributed to the study.
- Webequie First Nation will disclose the IKLRU as required through the regulatory process only.
- Webequie First Nation will store the IKLRU information in a secure location and it will be provided to the appropriate Project staff and consultants only.
- Webequie First Nation will use the IKLRU information to contribute to the EAR / IS.
- Webequie First Nation will not include the full IKLRU report or study in the EAR / IS.
- Webequie First Nation will provide relevant IKLRU information to the appropriate disciplines for use in their EAR / IS sections.
- Webequie First Nation will use the IKLRU information to assess impacts on Métis Nation of Ontario - Region 2 land and resource use; thus, the IK section of the EAR / IS will summarize the IKLRU information without disclosing specific locations of use.
- Webequie First Nation will use the IKLRU information for the Project regulatory process only, including planning, design, assessment, construction, operation, maintenance and decommissioning.

IKLRU Study

Métis Nation of Ontario - Region 2 and Webequie First Nation agree that the type of information in the IKLRU Study Plan and scope will be included in the IKLRU Study.

The IKLRU Study will include information about the geographic location of data collected. This can be as numerical coordinates or as a location on a map with appropriate reference points.

Webequie First Nation will accept any additional land and resource use-related information within the IKLRU Study Area, as community members deem appropriate.

Métis Nation of Ontario - Region 2 and Webequie First Nation agree that upon completion of the IKLRU Study, Métis Nation of Ontario - Region 2 will approve the Report for use in the EAR / IS.

Signing this Agreement

Métis Nation of Ontario - Region 2 signing of this Sharing Agreement is no way represents their support for the Webequie Supply Road Project.

Re: Indigenous Knowledge / Indigenous Land and Resource Use Program for the Webequie Supply Road Project

Dear Nicholas Richards,

We hope that this letter finds you and your community well.

Webequie First Nation (WFN) is the proponent of the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will extend from Webequie Airport to the mineral deposit area near McFaulds Lake as shown in the enclosed project map. WFN has started the provincial environmental assessment (EA) and a formal Notice of EA Commencement was issued on October 29th, 2021. The WSR Project is also subject to a federal impact assessment (IA) and the Notice of Commencement of the IA was issued on February 24th, 2020. Collectively the EA and IA are referred to as the "assessments" and will examine potential effects of the WSR Project including mitigation and monitoring, and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS). We will continue to provide you with updates as the assessment process continues, and welcome and appreciate your input throughout the planned consultation and engagement activities.

With this letter, we would like to share with you that we are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program for the Project. The IKLRU Program is a critical component of the information base upon which the assessments will rely. The information generated through the Program will be used in concert with scientific approaches, and both knowledge systems will be given equal consideration in forming the foundation for baseline conditions, predicting potential project effects, including potential impacts to your inherent Indigenous rights and interests.

The purpose of the IKLRU Program is to:

- Promote sharing of IKLRU information relevant to the Project;
- Help identify potential impacts of the Project, including those on Indigenous rights and interests; and

- Collaborate and work with Indigenous communities to enhance positive impacts or to identify measures to avoid/reduce potential effects on Indigenous rights and interests.

As traditional stewards of the land, we all must make certain that development in the area appropriately addresses the rights, interests, values, traditions, concerns, and aspirations of Indigenous communities within the assessment context, during the life of the WSR Project, and beyond. It is in this spirit that we invite Métis Nation of Ontario - Region 2 to participate in the IKLRU program.

The IKLRU Program for the WSR Project will occur in two phases:

1. Collecting existing Indigenous Knowledge and information on Indigenous land and resource use that communities are prepared to share with WFN in order to help inform the early stages of the assessments; and
2. Completing project-specific Indigenous Knowledge and Lands & Resource Use studies, or compiling information/data in other form, that can be provided to the Project Team for integration into the assessment.

At this point, we are enquiring whether Métis Nation of Ontario - Region 2 is interested in participating in the IKLRU Program in either (or both) phases of the Program. We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the IKLRU Program for the WSR Project. In addition, the Project Team can help communities access this funding, where applicable.

While the IKLRU Program is distinct from the Consultation Program for the WSR Project, the two are complementary and collectively serve to solicit Indigenous perspectives, values and inputs with respect to project planning and assessment process. You may share as much or as little IKLRU information as you wish, and in whatever form you prefer. Your community will also have the opportunity to review the EAR / IS to ensure accuracy of IKLRU information, including if it has been adequately, appropriately, and respectfully represented within the assessment process.

While there are significant benefits to integrating Indigenous Knowledge from your community in the assessment, we also recognize that this knowledge belongs to your community and that confidentiality needs to be respected. Our approach to working with your community on the IKLRU Program will be guided by the following key principles:

- The people of your community are a source of knowledge on uses of the land and its resources, associated cultural practices, and community values.
- We are your partner – our goal is to work together with you to conduct the IKLRU Program in a way that contributes to your community's well-being so that Indigenous Knowledge and land and resource use information can be meaningfully integrated into the assessment process.

Protection and confidentiality of IKLRU information is of the utmost importance to the Project Team. To honour and respect this important information, we propose establishing an Indigenous Knowledge Sharing Agreement with your community prior to the collection and use of your community's information. The Sharing Agreement would outline how confidential and sensitive information would be utilized in the WSR Project's assessment and design process. It would also adhere to all community-specific protocols and OCAP (ownership, control access and possession) principles. Once you've confirmed participation in the IKLRU Program, we will work with you to prepare the Sharing Agreement. We have attached a draft Indigenous Knowledge Sharing Agreement for your review and consideration.

In order to confirm that Métis Nation of Ontario - Region 2 is interested in participating in the IKLRU Program, we ask that you contact us by January 27, 2022. Our Project Team will also reach out to you in a few days if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council to discuss next steps, including the methods and protocols your community will follow.

To express your community's interest or if you have any questions regarding the IKLRU Program or the WSR Project, please feel free to contact Michael Fox (807-472-6147; michael.fox@indigenousengagement.ca) or Brianna Patrick (204-223-5770; brianna.patrick@indigenousengagement.ca) of the Project Team.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Chief Cornelius Wabasse
Webequie First Nation

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Mr. Nicholas Richards,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as “the assessments” and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite Métis Nation of Ontario - Region 2 to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

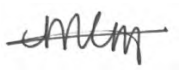
Next Steps

In order to confirm that Métis Nation of Ontario - Region 2 is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,



Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist
Webequie Supply Road

Project Map

February 4, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment and Impact Assessment (EA / IA) process. This upcoming week's session is: **WSR Presents: EA / IA Process.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 9th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is exploring virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

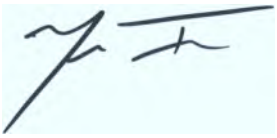
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

February 18, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Indigenous Knowledge. This upcoming week's session is: **WSR Presents: Indigenous Knowledge - Part 1.** The Project Team has planned an Indigenous Knowledge series, this upcoming week being the first part to that series.

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 23rd, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to brianna.patrick@indigenousknowledge.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

March 18, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Indigenous Knowledge. This upcoming week's session is: **WSR Presents: Indigenous Knowledge - Part 3.** The Project Team has planned an Indigenous Knowledge series, this upcoming week being the third part in the series.

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **March 23rd, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to brianna.patrick@indigenousknowledge.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

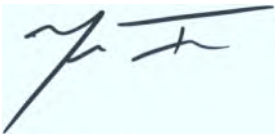
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

April 1, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Socio-Economics. This upcoming week's session is: **WSR Presents: Socio-Economics.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **April 6th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to brianna.patrick@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.

Date Published: Apr 26, 2022

WEBEQUIE SUPPLY ROAD (WSR) PROJECT

Socio-Economic Study Plan
Fact Sheet

What is the primary purpose of the Socio-Economic Study Plan?

To characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) as a result of the construction and operation/maintenance of the WSR. Provide recommendations for minimizing negative socio-economic effects and enhancing beneficial effects of the Project.

What are socio-economics?

Studying socio-economics provides information about current jobs, income, education and housing conditions in a community.

What kind of information is going to be gathered?

- Community values;
- Community demographics (age, gender, marital status, education, labor force activity, health, etc.);
- The type of access each community has to education, jobs, or transportation; and
- Well being and safety.

Who is the information being gathered from?

- The 22 Indigenous communities that have been identified as the ones whose established or asserted Aboriginal and Treaty rights may be adversely affected by the Project and/or may have interests in the project.

*The Project Team will respect protocols and work with each community to understand how the information will be transferred, stored, and applied, and will be protected and kept confidential.

How is the information on community socio-economics being collected?

Primary information will be collected from Indigenous communities:

- A socio-economic survey using Survey Monkey, which will be sent by e-mail/letter;
- Key informant interviews with Chief and Councils, band administration staff, social service providers, healthcare providers, and knowledge keepers; and
- Collection of Indigenous knowledge through engagement activities.

Secondary information will be collected and reviewed:

- Published data from government websites, Indigenous community websites, municipal websites, and other open-source data. This information will be used to identify community demographics, community infrastructure, community social services, etc.

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Mr. Nicholas Richards,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as “the assessments” and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite Métis Nation of Ontario - Region 2 to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

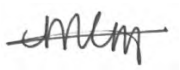
Next Steps

In order to confirm that Métis Nation of Ontario - Region 2 is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,



Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist
Webequie Supply Road

Encl.
Project Map

April 29, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on air quality and noise & vibration. This upcoming week's session is: **WSR Presents: Air Quality + Noise & Vibration.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **May 4th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

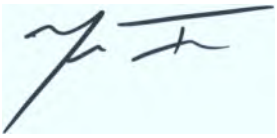
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

WSR
WEBEQUIE
SUPPLY ROAD

May 13, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on wildlife and species at risk. This upcoming week's session is: **WSR Presents: Wildlife and Species at Risk.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **May 18th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

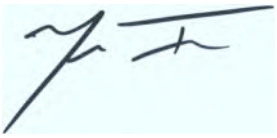
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

May 27, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on field studies related to water. This upcoming week's session is: **WSR Presents: Field Studies - Water.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 1st, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

July 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

The WSR Project Team is currently hosting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

If the WSR Project Team has already hosted a virtual information session for your community, you can watch the recording of your community's session at: **supplyroad.ca/sessions/**. You can leave questions or comments at any time on your community's page and the Project Team will provide a response. If the WSR Project Team has not yet hosted a virtual information session for your community, you can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Socio-Economic Primary Data Collection Program

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socioeconomic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. You can find more information regarding the program on the WSR website: https://www.supplyroad.ca/ik-and-socio-economic/

We would like to invite your community to participate in the WSR socio-economic primary data collection program. To express your community's interest or if you have any questions regarding the socio-economic primary data collection program for the WSR Project, please feel free to contact Marian Tibor-McMahon at 416-668-3298 or marian@indigenousengagement.ca.

At any time, you can access additional information on the WSR website: **supplyroad.ca.** You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter

August 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Consultation Round 2

Throughout the EA/IA phase, the Project Team conducts studies to gather information on a wide range of topics and consults with Indigenous communities, members of the public, and other stakeholders, to evaluate the Project and its potential effects. This month we are concluding our Consultation Round 1 and will be moving into Round 2, before the final Round 3.

We encourage community members to watch their information session at **supplyroad.ca/sessions/** where you can find your community-specific page.

Consultation Round 2 will focus on the following topics:

- Summary of input received from Consultation Round 1
- Identification and evaluation of alternatives
- Preliminary recommended preferred route and supportive infrastructure (aggregate/rock source areas, construction camps, access roads), including rationale for selection
- Preliminary engineering design elements of WSR (bridges/culverts)
- Next steps and schedule

Stay tuned with the WSR Project by following our social media channels:

Craig Wallace, Project Manager, SNC-Lavalin Inc.

August 15, 2022

Dear Nicholas Richards,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps.

We will be offering a community information session, via Zoom, on **Monday, August 29 between 12pm and 1:30pm** for Métis Nation of Ontario - Region 2 , where there will be a presentation on the WSR Project activities. We anticipate the community information session to be approximately 1.5 hours in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://maverickav.zoom.us/meeting/register/tZIvd-2pqz4vE9WgC8E1SLLG8giSsf4dpCjN.

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: Meeting ID: 862 0415 5591 & Passcode: 722256.

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/mno/.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Lead
Webequie Supply Road

CC: Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks

Craig Wallace, Project Manager, SNC-Lavalin Inc.

October 07, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations - Caribou.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **October 11th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**
You can also stay tuned with the WSR Project by following our social media channels:

WSR
WEBEQUIE
SUPPLY ROAD

October 21, 2022

Tim Sinclair, Regional Councilor
Métis Nation of Ontario - Region 2
226 May Street South Main Floor
Thunder Bay, ON
P7E 1B4

Re: Round 1 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Regional Councilor Sinclair:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report (electronic and hard copy), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);

- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 2 for the Project from Winter 2023 to Summer 2023. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 1;
- Identification and evaluation of alternatives (routes, aggregate source areas, etc.,);
- Preliminary recommended preferred route and supportive infrastructure (aggregate/ rock source areas, construction camps, access roads), including rationale for selection;
- Preliminary engineering design elements of WSR (bridges/culverts); and,
- Next steps and schedule.

We welcome any feedback and input your community may have on the attached Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

Regional Consultation Lead
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, SNC-Lavalin Inc.

November 2, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week featuring our special guest storyteller/comedian Ron Kanutski. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations – Fish and Fish Habitat.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 8th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

November 17, 2022

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Biweekly Radio and Livestreaming Series is Back

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Building Roads in Muskeg Areas/James Bay Lowlands.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **Tuesday, November 22nd, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.

Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

WSR
WEBEQUIE
SUPPLY ROAD

December 14, 2022

Tim Sinclair, Regional Councilor
Métis Nation of Ontario - Region 2
226 May Street South Main Floor
Thunder Bay, ON
P7E 1B4

Dear Mr. Sinclair:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Consultation Progress Report Round 1

On October 28, 2022, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, December 14, 2022, the package status indicates that it has been successfully delivered to your community on October 31, 2022.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Engagement Opportunities

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

WSR WEBEQUIE SUPPLY ROAD

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

We welcome any feedback and input your community may have on the Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

WSR
WEBEQUIE
SUPPLY ROAD

January 27, 2023

Tim Sinclair, Regional Councilor
Métis Nation of Ontario - Region 2
226 May Street South Main Floor
Thunder Bay, ON
P7E 1B4

Dear Mr. Richards:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to you.

Consultation Progress Report Round 1

On October 28, 2022, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, January 27, 2023, the package status indicates that it has been successfully delivered on October 31, 2022.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

We welcome any feedback and input your community may have on the Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Radio Show and Livestream Series

The WSR Project team will be resuming the radio show and livestreaming series in the coming weeks. Stay tuned for more information.

March 9, 2023

Dear Chief,

Radio Show and Livestream

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: The Alternatives Assessment Process – An Overview.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on March 14th, 2023 at 12:00pm - 1:00 pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team will begin virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

March 17, 2023

Mr. Nicholas Richards
Métis Nation of Ontario – Region 2
226 May Street South Main Floor
Thunder Bay, ON
P7E 1B4

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Mr. Richards,

We hope that this letter finds you and your community well.

As you know from our previous correspondence, Webequie First Nation is the proponent of the Webequie Supply Road Project, a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities.

Today, we are writing to confirm whether your community has an interest in participating in the Socio-Economic Primary Data Collection Program and is follow-up to the invitation letter sent to you on December 20, 2021. In this letter, we outlined the purpose of the socio-economic study, types of information we would like to gather and suggested primary data collection methods (e.g., community surveys, focus groups, key informant interviews). Primary data is information collected first-hand directly with community members about issues and conditions of the community.

We have a timeframe for the EA/IA process to complete our studies and document the results. Our goal this year is to complete a draft Socio-Economic Existing Conditions Report, which documents the socio-economic baseline conditions of communities. We would like to collaborate with your community to discuss and collect socio-economic information and/or verify information gathered to-date based on current desktop research to help us to understand existing social and economic conditions.

The preliminary “Valued Components” for the EA/IA, which represent aspects of social and economic conditions that are important to you and the community, and require information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;

- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

In order to meet the schedule for the completion of the EA/IA study, we respectfully request an indication of your community's interest in participating in the Socio-Economic Primary Data Collection Program by **April 17, 2023**, as it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by **June 16, 2023.**

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Heather Swan, Deputy Project Manager
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Michael Fox, Regional Consultation Coordinator, Webequie Supply Road
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, SNC-Lavalin Inc.

March 22, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Alternatives Routing in the Preferred Corridor.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, March 28th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.

May 3, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Analysis of Alternatives- Multiple Accounts Analysis - What is it?**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, May 9th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Craig Wallace, Project Manager, SNC-Lavalin Inc.

May 9, 2023

Dear Mr. Richards,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Tuesday, May 23rd from 2:00pm-3:00pm EST** for Métis Nation of Ontario - Region 2, where there will be a presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/86095240736

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 860 9524 0736**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/MNO/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

At any time, you can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

WSR240-WEB-PR-LT-0527 Web-WSR Letter Re Virtual Community Info Session MNOR2-2023-05-09

May 17, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternatives for Supportive Infrastructure (i.e., camps, laydown areas, aggregate/rock sources, access roads).**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Wednesday, May 24th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

May 24, 2023

Dear Chief,

We would like to provide a **correction to the times** provided on our previous correspondence related to the Webequie Supply Road (WSR) project radio show and livestream happening today.

Radio Show and Livestream
The WSR Project team will be resuming the live streaming and radio call-in show today. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternatives for Supportive Infrastructure (i.e., camps, laydown areas, aggregate/rock sources, access roads).**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Wednesday, May 24th, 2023 at 6:00pm – 7:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

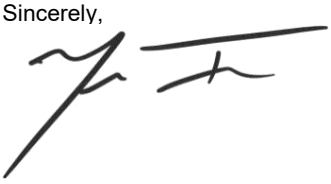
The livestreaming event is scheduled on the same day as the above radio show at **7:30pm – 8:00pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we apologize for any confusion this may have caused and we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

MARTEN FALLS FIRST NATION
COMMUNITY ACCESS ROAD

Aboriginal and/or Treaty Rights and Interests Forum
February 8th & 9th, 2023
Marten Falls First Nation Community Access Road
Comment/Responses – Métis Nation of Ontario

#	Comment/Issue by Métis Nation of Ontario	Post Forum Response
1	A gap in the background information was identified, where information regarding the Métis presence in the project area should be added to the reports	A commitment was made to include detailed historic information in the Cultural Heritage Report: Existing Conditions and Preliminary Impact Assessment as well as all archaeological reports moving forward.
2	The delegation added that while they were still uncertain of the level of participation within the consultation process for this project, they did want the opportunity to review all reports.	Comment acknowledged.

June 1, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Proposed Criteria and Indicators for Evaluation of Alternatives for Supporting Infrastructure.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Tuesday, June 6th, 2023 at 12:00pm – 1:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

The livestreaming event is scheduled on the same day as the above radio show at **2:00pm – 2:30pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Virtual Information Sessions for Round 2 Part 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 28, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Construction Camps.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Wednesday, July 5th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.
On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

July 12, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream
The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Road Foundation Design.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, July 18th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.
On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

July 19, 2023

Dear Mr. Richards,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Tuesday, August 1st, between 2:00pm-3:00pm EST** for Métis Nation of Ontario - Region 2 where there will be a second part of the presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/86471920276

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 864 7192 0276**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/MNO/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

July 26, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has been conducting virtual information sessions for each community with the second part of the presentation for Consultation Round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Public Information Center #2

The WSR Project team held Public Information Center (PIC) #2 in Thunder Bay on October 3rd for Indigenous communities & 4th for the general public and Timmins on October 12th for the general public. The PIC's were held to provide interested parties with an opportunity to learn about the ongoing assessment of alternatives that is being conducted as part of the EA/IA study and provide feedback. The PIC consisted of a presentation and an informal drop-in center with display information about the Project. Project team representatives shared information on the EA/IA process, studies being conducted, criteria for evaluation of route alternatives and alternative locations for supportive infrastructure (e.g., aggregate source areas, construction camps), including results from the assessment, the feedback we have heard to date, and future consultation and engagement opportunities.

If you were unable to attend the PIC #2, you can find the formal notice, livestream, more information on the study and progress, and updates on our project website: https://www.supplyroad.ca/

Aboriginal and/or Treaty Rights and Interests Forum

Building on the momentum of the first Aboriginal and / or Treaty Rights and Interests Forum in February 2023, Webequie First Nation and Marten Falls First Nation encourage you to participate in a follow-up Forum on November 21-23, 2023 at the Valhalla Inn in Thunder Bay, to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link, and Marten Falls Community Access Roads Projects.

The Purpose of this Forum is to create a respectful, culturally sensitive, and collaborative space to develop and/or confirm our understanding of the Project areas (WSR, MFCAR, and NRL) as your Aboriginal and / or Treaty Rights and Interests may be impacts by these Projects. Please note the purpose of this event is to discuss Aboriginal and / or Treaty Rights and Interests and not to collect Indigenous Knowledge.

If you have any questions regarding the Forum or need additional information to engage your community, please do not hesitate to reach out to us at the contacts below.

Stay Up to Date

Craig Wallace, Project Manager, SNC-Lavalin Inc.

WSR
WEBEQUIE
SUPPLY ROAD

January 25, 2024

Nicholas Richards
Métis Nation of Ontario - Region 2
226 May Street South Main Floor
Thunder Bay, ON P7E 1B4

Re: Round 2 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Mr. Richards:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR or the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report 2 (electronic and hard copy), which summarizes and documents Round 2 of the Engagement and Consultation Program with your community for your review and comment.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1;
- Overview of results of baseline studies to characterize existing conditions within the study area;

- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/ rock source areas, construction camps, access roads) from multifactor analysis, including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design); and
- Next steps and schedule.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report 2, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 2;
- Summary of preliminary effects assessment of the Project, including cumulative effects;
- Proposed impact management, mitigation and follow-up monitoring program; and
- Next steps in EA/IA process.

We welcome any feedback and input your community may have on the attached Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

Regional Consultation Lead
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, AtkinsRéalis Canada Inc.

2

January 31, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week with changes to the order of topics that was provided on the January 2024 newsletter. See below the updated schedule of topics for February 2024:

Date	Topic
Monday, February 5, 2024	Road Access and Control Issues
Monday, February 12, 2024	Minimizing Project Impacts
Tuesday, February 20, 2024	Construction Camps and Other Opportunities
Monday, February 26, 2024	Bridges and Water Crossings

The topic of the upcoming session is: **WSR Presents: Road Access and Control Issues.**

The livestreaming event is scheduled for **February 5th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date

February 08, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series
The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Minimizing Project Impacts.**

The livestreaming event is scheduled for **February 12th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities
As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Nicholas Richards
Métis Nation of Ontario - Region 2
226 May Street South Main Floor
Thunder Bay, ON
P7E 1B4

Dear Mr. Richards,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to you containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Construction Camps and Other Project Opportunities.**

The livestreaming event is scheduled for **February 20th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet

with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions

Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Dear Mr. Richards,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1
- Overview of results of baseline studies to characterize existing conditions within the study area;

- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: The Results of the Caribou Study.**

The livestreaming event is scheduled for **March 11th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

WSR
WEBEQUIE
SUPPLY ROAD

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.

Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

Re: Preliminary draft Métis Nation of Ontario - Region 2 Community Existing Conditions Summary
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Mr. Richards,

We hope that this finds you and your community well.

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR, or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities. At this time the Project Team is working toward completing the preliminary draft Socio-Economic Existing Conditions Report, that will be used to draft the effects assessment of the Project, which will be captured in the EA and IA.

The Project Team led by the Webequie First Nation is striving to gather as much Anishinaabemowin/Anishinaabe/Mushkegowuk Indigenous Knowledge as it relates to the Project and to help inform the socio-economic existing conditions.

This letter is to request your review of the draft Community-Specific Existing Conditions Summary document, which is based on the data and information collected for the Socio-Economic Existing Conditions Report of the EA/IA and presents the preliminary findings specifically collected for the Métis Nation of Ontario - Region 2. The document summarizes information gathered through publicly available online resources and information gathered with communities, through interviews, focus groups and surveys, if the community participated in the Socio-Economic Primary Data Collection Program. The community-specific baseline information provided in the document is arranged as follows:

- **Community Setting** – including community overview, history, values and aspirations;

- **Population and Demographics** – including population, age, gender, indigenous identity, mobility and migration, etc.;
- **Housing and Accommodations** – including housing demand/ affordability/ supply/ quality and number of people living in a home;
- **Social Services and Infrastructure** – including supply and demand for education, childcare, healthcare, water, waste, energy, and communications;
- **Transportation** – including volume of, and demand for, road and air transportation;
- **Community Well-Being and Safety** – including social cohesion and culture, participation in social and/or cultural events, safety such as levels of domestic violence, assault, and nuisance such as air quality and noise concerns;
- **Regional and Local Economy** – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity;
- **Traditional Indigenous land and resource use** – including sites and areas used for traditional activities, and culturally and spiritually important sites and areas;
- **Land Use Compatibility** – including existing and proposed land uses;
- **Recreation and Tourism** – including land/waterway access and resource availability; and
- **Provincial Parks and Protected Areas** – including areas of natural and scientific interest and conservation reserves.

We want to prepare a holistic and comprehensive overview of information for the Métis Nation of Ontario - Region 2 and would much appreciate to hear back from you on this document as our team is always open to working with you for further improvement on the content.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Michael Fox
Regional Consultation Lead

DRAFT

1. Project Context

The proposed Webequie Supply Road (WSR, or 'the Project') is a proposed new all-season road approximately 107 kilometres (km) in length from the Webequie First Nation Reserve to the mineral deposit area near McFaulds Lake (also referred to as the Ring of Fire). The Project location is shown on Figure 1-1. The preliminary corridor for the road consists of a northwest-southeast segment running 51 km from the Webequie First Nation Reserve to a 56 km segment running east-west before terminating near McFaulds Lake. A total of 17 km of the corridor is within the Webequie First Nation Reserve.

The information provided in this document is preliminary at this time, and it has been prepared with information that is known specifically for Métis Nation of Ontario – Region 2. This is a living draft document that has yet to be reviewed and validated by the Community.

Webequie First Nation is the proponent for the Project. The Project Team led by Webequie First Nation is striving to gather as much Anishinaabemowin (Oji-Cree), Anishinaabe (Ojibway), Mushkegowuk (Cree) and Métis Indigenous Knowledge as it relates to the Project and to help inform the socio-economic baseline. This document will be continuously updated when information from the Métis Nation of Ontario – Region 2 and other communities is shared with the Project Team.

The gathering of important Indigenous Knowledge takes time due to the limited resources and capacities of communities. It is also important that culturally relevant protocols are followed. This requires relationship building and consistency to establish trust.

Webequie is an Anishinaabemowin Tawin (community) located in Treaty No. 9 territory, about 540 km north of the City of Thunder Bay. Anishinaabemowin is a blend of Anishinaabe and Mushkegowuk (James Bay Cree).

Before the first settlers arrived, the Anishinaabe and Mushkegowuk sustainably shared the territory and lived Mino Bimaadzwin (The good life) through guidance from Anishinaabe law, which governs their Kii'manitu'meano-goonan (Creator given) responsibilities to assure a good relationship with the Land (Webequie First Nation, 2021).

Generally, the Anishinaabe and Mushkegowuk shared a common spiritual view with Indigenous Nations across the continent, and that is based on a profound respect for Shkagamik-Kwe (Mother Earth), which was also a relationship based on reciprocity (Thomas, 2020; Helin, 2008).

In Ontario, the Métis emerged as an Indigenous people in multiple areas around the Upper Great Lakes as well as along the waterways and fur trade routes. The historic Métis communities developed a distinct Indigenous identity, culture and way of life (Métis Nation of Ontario, 2017).

As the proponent for the Project, Webequie First Nation like many Indigenous Nations and communities across Turtle Island (North America) have been living with the effects of colonial impositions since the arrival of Europeans to the continent and the formation of Canada. The impositions, spanning more than seven generations have had a reverberating impact on the Anishinaabemowin. These impacts should be understood while considering 'baseline' socio-economic data because Webequie First Nation, the proponent for the Project, has been striving for Mino Bimaadzwin and to strengthen their Nation in a holistic way while reclaiming culture which feeds into baseline data as well as Aboriginal and Treaty Rights and Interests.

Before settlers arrived, Indigenous Nations governed themselves through their own governance structures and Natural laws. Anishinabek and Mushkegowuk governed themselves through a clan-style system, as shown on Figure 1-2. Typically, the Anishinabek govern themselves through a clan-system which includes seven main clans with many sub-clans. Each clan has different responsibilities within the Nation at large.

Figure 1-2: Representation of the Anishinabek Dodemag (the "Clan-System")

Source: Atikameksheng Anishnawbek, 2023.

Colonial impacts have been devastating in Anishinaabe and Mushkegowuk Homelands. Before the Hudson Bay Company (HBC) exploited fur-bearing animals to support trade in Europe, the people lived sustainably with the land. Fur-bearing animals were hunted to near extinction, with the beaver population having been nearly decimated, which resulted in starvation for the people living in their homelands (SNC-Lavalin, 2022). Before that time, Anishinabek had never before been subject to a commerce style economy (SNC-Lavalin, 2022).

The Métis Nation grew out of the fur trade, along waterways, and regional interconnected communities (Métis Nation of Ontario, 2024). These communities had a highly mobile lifestyle with seasonal rounds, extensive kinship connections and a shared collective history and identity (Métis Nation of Ontario, 2024).

The *Indian Act*, implemented in 1876 had an adverse impact on Indigenous Peoples across Canada. Perhaps the most harm was done while Indigenous children were forced to attend Indian Residential Schools, which were either government run, or church run institutions.

A timeline has been developed to better understand the effects of legislation, encroachment on rights as well as reconciliation efforts, as shown in Table 1-1.

DRAFT

Table 1-1: Timeline of Effects on Indigenous Peoples of Canada from Legislation, Encroachment on Rights and Reconciliation Efforts

Timeline	Effects
Hudson Bay Company, 1670	The HBC officially established itself in 1670 to set up trade for the fur industry (primarily beaver pelts). HBC set up its first official post in 1673 in Moose Factory, near the southern hub of James Bay and subsequently built a small outpost along the Albany River in 1743. The exploitation of animals for fur in the region resulted in a starvation crisis for the Anishinaabe and Mushkegowuk. It took the beaver population a considerable time to recover (SNC-Lavalin, 2022).
British North America Act, 1867	The *British North America Act* made the federal government responsible for Indigenous Peoples (Government of Canada, 2011).
Royal Proclamation, 1763	The Royal Proclamation of 1763 Established constitutional basis for future negotiations of treaties and confirmed the protection of lands for the exclusive use by Indigenous Peoples (Hall, 2019).
Indian Act, 1876	The *Indian Act*: Imposed the Reserve system 1876 – ongoing. Forced attendance at Indian Residential Schools 1894 – 1996. Outlawed ceremonies: 1876 – 1951. Oppressed women's rights: 1876 – ongoing. Imposed the band council system 1876 – ongoing. 60's Scoop – Gave provinces jurisdiction to 'scoop' Indigenous children from their homes. There have been class action lawsuits to address the loss of culture and identity.
James Bay Treaty (Treaty No. 9), 1905	The James Bay Treaty (No.9) was signed with Anishinaabe, Mushkegowuk, and Anishinaabemowin. Indigenous Peoples in the territory wanted protections for lands, resources and fur-bearing animals.
The Mines Act, 1906	The *Mines Act* established claims staking procedures and prospectors' licenses providing exclusive rights to stake claims and work upon Crown lands.
Ontario Registered Trapline System, 1946	Imposed sole ownership of trapping areas, which did not align with cultural values (SNC-Lavalin, 2022).
Royal Commission on Aboriginal Peoples, (RCAP) 1996	RCMP was mandated to investigate and propose solutions to the challenges affecting the relationship between Aboriginal Peoples, the Canadian government, and Canadian Society.
Truth and Reconciliation Commission of Canada, (TRC) 2015	Final Report, Calls to Action, Indian Residential School settlement agreement (Truth and Reconciliation Commission of Canada, 2015).
National Inquiry into Missing and Murdered Indigenous Women and Girls, 2019	Reclaiming Power and Place: The Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls (MMIWG, 2019).

It is important to tell the story of Indigenous Nations in order to understand their current socio-economic conditions and Indigenous Knowledge. Part of that story includes not only the history of the Indigenous Nations, but also that of Indigenous Peoples in Canada.

DRAFT

COMMUNITY SETTING

DRAFT

AtkinsRéalis - Confidential

2. Community Setting

2.1 Community Overview

Indigenous communities in the Local Study Area (LSA) and Regional Study Area (RSA) for the WSR socio-economic baseline are Anishiniimowin, Anishinaabe and Mushkeego First Nations, and Métis Peoples with traditional territories that cover the lands in the study area. A number of First Nations in the RSA are predominantly located north of the provincial highway system, and accessible only by air and by winter road. Other First Nations, and the Métis community, are located further south, are generally serviced by the provincial highway system. All First Nations communities are located within the Treaty No. 9 territory, except for Long Lake #58 First Nation, which lies within the geographic boundaries of the Robinson-Superior Treaty of 1850,

The Métis stand as a unique Indigenous community with a distinct history, culture, language and territory that encompasses the waterways of Ontario, encircles the great lakes, and spans the historical Northwest region. The Métis nation is composed of descendants originating from unions between indigenous women and European men. The initial offspring of these unions exhibited mixed ancestry.

Founded in the early 1990's, by the will of Ontario Métis, the Métis Nation of Ontario (MNO) represents the collective aspirations, rights and interests of Métis people and communities throughout Ontario. The MNO has a democratic, province-wide governance structure. Every four years Métis citizens have the opportunity to choose their provincial and regional leadership, by voting in province-wide ballot box elections.

MNO Community Councils have been established throughout the province. They get their mandate to support local governance from the MNO through signed Community Charter agreements, and work collaboratively with the MNO and other Community Councils to represent the rights and interests of regional rights-bearing Métis communities throughout the province.

Regional MNO communities have Aboriginal rights in traditional territories in Ontario. These traditional territories support traditional activities such as hunting, fishing, trapping, food and medicine gathering, and other social and cultural activities. MNO "Region 2" is located in Northwestern Ontario, generally in the Thunder Bay district census division, and is made up of three MNO Community Councils that represent the Lakehead/Nipigon/Michipicoten traditional MNO territory. The three MNO Community Councils are as follows:

- Superior North Shore Métis Council;
- Greenstone Métis Council; and
- Thunder Bay Métis Council.

The traditional language spoken by Métis people is Michif. It serves as the distinctive language of the Métis community. The number of Michif speakers has diminished over time due to the colonization process which suppressed languages other than French and English in Canada. Fortunately, ongoing initiatives are now dedicated to conserve the Michif language and acquainting Métis youth with the language, fostering a new generation of speakers.

DRAFT

2.2 Community History

The Métis People emerged in the historic "North-West" of what is now Canada. The Métis developed its collective identity with their own language (Michif), culture, traditions and way of life (Métis Nation of Ontario, 2017a). The Supreme Court of Canada recognized the Métis People as "one of the "Indigenous peoples who were living in the western territories" prior to Canada's westward expansion into the North-West after confederation" (Métis Nation of Ontario, 2023a). In Ontario, it is recognized that distinct Métis communities emerged in areas around the upper Great Lakes and along waterways that were used by the fur trade prior to European control in these regions (Métis Nation of Ontario, 2023a).

In 1993, the Métis Nation of Ontario was established as a Métis-specific governance structure for Ontario Métis communities, which advocates for Métis rights and culture, and serves its citizens (Métis Nation of Ontario, 2023b). In 2004, the Supreme Court of Canada in *R. v. Powley* found "the inclusion of the Métis in Section 35 represents Canada's commitment to recognize and value the distinctive Métis cultures, which grew up in areas not yet open to colonization, and which the framers of the *Constitution Act, 1982* recognized can only survive if the Métis are protected along with other aboriginal communities" (Métis Nation of Ontario, 2017a). The *Métis Nation of Ontario Secretariat Act, 2015* acknowledges Ontario Métis established the Métis Nation of Ontario to represent them democratically at local, regional and provincial levels (Métis Nation of Ontario, 2017a).

The history of the Ontario Métis people north of Lake Superior includes a distinctive community, with its own collective identity and shared customs, practices and traditions (Métis Nation of Ontario, 2017b). The historic record shows a population of Métis people developed amongst the trading communities around trading posts over successive generations, and kinship ties and marriages between Métis families occurring over time.

2.3 Community Values and Aspirations

The Métis Nation of Ontario have declared that they were founded to "bind their people together to collectively promote our common culture, social, political, and economic well-being…and have Métis Nation of Ontario be their representative body" (Métis Nation of Ontario, 2023). This includes (but not limited to) encourage participation of all Métis, re-establishing land and resource bases, developing prosperity and economic self-sufficiency promoting the history, culture, language and traditions and promote the improved health and wellness of individuals and families (Métis Nation of Ontario, 2023).

Some of the goals of MNO are set out in the MNO *Statement of Prime Purpose* include:

- Creating a Métis-specific governance structure for the implementation of the nation's inherent right to self-government in the province;
- Establishing a credible and recognized identification system for Métis people within the province;
- Focusing on 'nation building' through working together as a collective in order to support Métis citizens and communities;
- Pursuing a rights-based agenda and proudly asserting the Métis existence as a distinct Indigenous people within Ontario;
- Protecting and preserving the distinct culture and heritage of the Métis Nation in the province; and,
- Improving the social and economic well-being of Métis children, families and communities throughout the province.

On February 23, 2023, Canada and MNO signed the *Métis Self-Government Recognition and Implementation Agreement.* This agreement builds on the 2019 self-government agreement.

DRAFT

Upon signing the 2023 agreement, Canada officially recognizes that the MNO is the Indigenous government for the Métis communities represented by the MNO. The Métis collectivity includes MNO citizens who are Métis rights-holders and those entitled to become citizens as well as Métis communities in Ontario. In addition, the 2023 agreement recognizes:

- The Métis communities represented by the MNO are a successor to the historic Métis Nation and one of the Métis collectives that make up the Métis Nation today;
- The Métis communities represented by the MNO hold the inherent right of self-government recognized and affirmed by section 35 of the *Constitution Act, 1982*;
- The MNO has law-making powers in areas such as citizenship, leadership selection, and government operations;
- The MNO is an Indigenous governing body for the purposes of An Act respecting First Nations, Inuit and Métis children, youth and families.

The recognition in the 2023 agreement is only binding on Canada and the MNO and is legally enforceable as between the parties. The agreement does not address harvesting or land-related matters or rights.

In addition to the recognition set out above, the 2023 agreement includes a commitment to negotiate a self-government treaty between the MNO and Canada in the next two years (CIRNAC, 2023).

3. Social Environment

3.1 Population and Demographics

Population and demographic data are important tools used to assess socio-economic conditions in communities, as these data can also be used to identify vulnerable groups such as women, disabled persons, Elders and youth. These are segments of the population that could either benefit or be negatively impacted (directly or indirectly) by the Project, and often experience barriers to participation as under-represented groups. Population and demographics are described in this section using the following indicators using Census data:

- Population overview, including gender and age;
- Indigenous identity (according to Census categories, First Nation, Métis, Inuit or non-Indigenous);
- Languages;
- Mobility and migration; and
- Immigration data is unavailable.

These indicators provide insights into the existing socio-economic conditions where the Project is being considered. The information is to be used in the assessment of potential effects of the Project and to develop strategies to mitigate any negative effects.

The following section provides an overview of population and demographics at the District level. This approach was taken for all communities in the RSA.

The Thunder Bay District has the largest population of communities in the Regional Study Area (RSA) and is projected to grow, between 2021 and 2043 from 146,862 to 150,498. The Thunder Bay District population identifies primarily as non-Indigenous with just 16% of the population identifying as Indigenous. Most households in the Thunder Bay District speak English in their homes. The Thunder Bay District has the highest percentage of immigrant residents in the RSA at 8%. Representatively, the Métis Nation of Ontario citizens of Region 2 are generally included in the Thunder Bay District census division.

DRAFT

3.1.1 Population Overview

The 2021 Census included, for the first time, a question on self-identified gender and added “at birth” to the gender question, which enabled cisgender, transgender and non-binary individuals to report their gender (Statistics Canada, 2023).

Table 3-1 presents the forecasted population of the Thunder Bay District for the period 2021 to 2043, broken down by self-identified gender. Population trends by self-identified gender in Thunder Bay District are summarized as follows:

- Over the projection period of 2016 to 2043, both the female and male population are forecast to increase;
- Between 2016 and 2043 the male population is forecast to increase from 72,325 to 76,553, a 5.8% increase;
- Between 2016 and 2043 the female population is forecast to increase from 73,725 to 73,995, a 0.4% increase; and
- Between 2016 and 2043, the distribution of the male population is forecasted to increase from 49.5% to 50.9% and the female population is forecast to decrease from 50.5% to 49.2%.

Table 3-1: Population Forecast by Self-Identified Gender, Thunder Bay District (2016, 2021, 2028, 2033, 2043)

Year	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
2016	146,050	100%	72,325	49.5%	73,725	50.5%
2021	146,860	100%	73,090	49.8%	73,775	50.2%
2028	148,002	100%	74,175	50.1%	73,845	49.9%
2033	148,822	100%	74,959	50.4%	73,895	49.7%
2043	150,478	100%	76,553	50.9%	73,995	49.2%

Source: Statistics Canada, 2017a; 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-2 presents forecasted population for the projection period 2021 to 2043, by age group. The age groups reported are 0 -14 years, 15 – 64 years, and 65 years and over. The 15 – 64 years age group represents the potential labour force. Population trends by age group in the Thunder Bay District are summarized as follows:

- The 0 – 14 years and 15 – 64 years age groups are both forecast to decline over the projecting period while 65 years and over are forecast to grow;
- Between 2016 and 2043, the 0 – 14 years age group is forecast to decrease from 21,845 to 20,709, a 5.2% decrease;
- Between 2016 and 2043, the 15 – 64 years age group is forecast to decrease from 95,930 to 81,584, a 15% decrease; and
- Between 2016 and 2043, the 65 years and over age group is forecast to increase from 28,270 to 56,522, a 99.9% increase.

Table 3-2: Population Forecast by Age Group, Thunder Bay District (2016, 2021, 2028, 2033, 2043)

Year	Total		0 to 14 years		15 to 64 years		65 years and over	
	Count	Distribution	Count	Distribution	Count	Distribution	Count	Distribution
2016	146,045	100%	21,845	15%	95,930	66%	28,270	19%
2021	146,865	100%	21,630	15%	93,095	63%	32,140	22%
2028	149,063	100%	21,333	14%	89,266	60%	38,464	26%
2033	151,480	100%	21,123	14%	86,628	57%	43,729	29%
2043	158,814	100%	20,709	13%	81,584	51%	56,522	36%

3.1.2 Indigenous Identity

Table 3-3 presents the population of the Thunder Bay District by Indigenous identity in 2021. Indigenous identity of the Thunder Bay District population is summarized as follows:

- 84.1% of the population identifies as non-Indigenous; and
- The majority of the population that identifies as Indigenous identifies as First Nations at 12.6% of the population, followed by Métis (3.3%). No respondents identified themselves as Inuit.

DRAFT

Table 3-3: Population Forecast by Self-Identified Indigenous Population, Thunder Bay District (2021)

Indigenous Identity	Count	Distribution
First Nations	18,115	12.6%
Métis	4,690	3.3%
Inuit	30	0%
Non-Indigenous	121,000	84.1%
Total	143,835	100%

3.1.3 Languages

Table 3-4 present the languages spoken most often in the home within the Thunder Bay District in 2021. Languages used by the Thunder Bay District population in 2021 are summarized as follows:

- The majority of homes in the Thunder Bay District speak English while at home at approximately 96%;
- Indigenous languages are spoken most often at home in 0.3% of homes, this category includes 39 Indigenous languages; and
- French and other non-official languages make up the remaining 3.8% of homes at 2.9% and 0.9%, respectively.

Table 3-4: Language Used Most Often at Home, Thunder Bay District (2021)

Language	Count	Distribution
English	137,220	95.9%
Other Non-Official Languages	4,130	2.9%
Indigenous Languages	1,350	0.9%
Total	375	0.3%

3.1.4 Mobility and Migration

Table 3-5 below presents the mobility status of Thunder Bay District residents in 2020. Mobility status refers to the status of a person place of residence on Census Day in relation to their place of residence on the same date one or five years earlier (Statistics Canada, 2022a).

Residents are categorized as “non-movers” or “movers”. Persons who, on Census Day, lived in the same residence as they did on the same date one year or five years earlier are referred to as non-movers, and persons who, on Census Day, did not live in the same residence as they did one year, or five years earlier are referred to as movers. Movers include non-migrants, migrants, internal migrants, and external migrants. Mobility status of residents of Thunder Bay District is summarized as follows:

- 89.2% of residents were identified as “non-movers”; 49.8% (63,510) of which were male and 50.2% (64,125) female; and
- “Movers” accounted for 10.8% of the population, 50.1% (7,775) of which were male and 49.9% (7,750) female.

DRAFT

Table 3-5: Mobility Status of Residents, Thunder Bay District (2020)

Mobility Status	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
Non-movers	127,640	89.2%	63,510	89.1%	64,125	89.2%
Movers	15,525	10.8%	7,775	10.9%	7,750	10.8%

DRAFT

3.2 Housing and Accommodations

Housing and accommodations is an important issue in particular for Indigenous people. In 2021, it was reported that one in five First Nations people (21.4% or 224,280 people) in Canada consider their household to be crowded (Statistics Canada, 2022a). This problem is primarily due to houses not having enough rooms for families and multiple generation of families living in the same household. Furthermore, many houses on First Nation reserves are in poor condition and require major repairs.

The following section provides an overview of population and demographics at a district level. This approach was taken for all communities in the RSA.

In general, the Thunder Bay District has 72,510 dwellings, 89% of which are occupied by usual residents. A private dwelling occupied by usual residents refers to a private dwelling in which a person or a group of persons is permanently residing (Statistics Canada, 2022a). Across the District approximately 75% of homes are owned, and the remainder are rented. Under 2% of dwellings are considered government or band housing. Over 60% of the dwellings are occupied by 1 to 2 persons and 30% have 8 or more rooms. Less than 10% of dwellings have been constructed over the past two decades. Nearly all dwellings are considered suitable based on household size and less than 10% are in need of major repairs.

The following sections provide information that will enable the assessment of effects on housing and accommodations by using the following indicators:

- Housing characteristics;
- Household characteristics; and
- Housing condition.

These indicators help with understanding existing socio-economic conditions of the community and predict potential effects of the Project on the community's quality of life.

3.2.1 Housing Characteristics

Figure 3-1 presents the total private dwellings and private dwellings occupied by usual residents in the Thunder Bay District for 2021. Private dwelling occupied by usual residents refers to a private dwelling in which a person or a group of persons is permanently residing (Statistics Canada, 2019). Information on private dwellings in 2021 is summarized as follows:

- There are 72,510 total private dwellings in the Thunder Bay District as of 2021; and
- Of the 72,510 private dwellings, 64,601 (89.1%) are occupied by usual residents.

Figure 3-1: Thunder Bay District – Total Private Dwellings and Occupied Private Dwellings, 2021

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-7 below presents the total number of occupied dwellings for the Thunder Bay District by structure type in 2021. Structure type of occupied dwellings is summarized as follows:

- The majority of occupied dwellings are classified as a single-detached home at 71.6%;
- Apartments make up 21% of occupied dwellings. Apartments include the following categories: apartments in a building that has less than five storeys, apartment or flat in a duplex, and apartments in a building that has five or more storeys; and
- The smallest category of occupied dwellings is other single-attached houses with 0.2%.

DRAFT

Table 3-7: Total Occupied Private Dwellings by Structural Type in Thunder Bay District (2021)

Structural Type	Count	Distribution
Single-detached house	46,220	71.6%
Semi-detached house	8,495	13.2%
Row house	2,575	4%
Apartment or flat in duplex	2,500	3.9%
Apartment in a building that has fewer than five storeys	2,290	3.5%
Apartment in a building that has five or more storeys	1,715	2.7%
Other single-attached house	660	1%
Moveable dwelling	140	0.2%
Total	**64,595**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-8 below presents the number of private dwellings by tenure (owned, rented, or government/band housing) for Thunder Bay District in 2021. Tenure of dwellings is summarized as follows:

- The majority of the private dwellings in the Thunder Bay District are owned at 72% followed by rented at 26.7%; and
- 1.3% of private dwellings are considered to be provided by the local government or band housing.

Table 3-8: Private Dwellings by Tenure in Thunder Bay District (2021)

Tenure	Count	Distribution
Owner	46,135	72.0%
Renter	17,135	26.7%
Dwelling provided by the local government, First Nation or Indian band	805	1.3%
Total	**64,075**	**100%**

DRAFT

3.2.2 Household Characteristics

The following subsections describe characteristics of households (i.e., occupied private dwellings) for Thunder Bay District. Table 3-9 below presents the total number of households by household size (i.e., the number of people per household) in Thunder Bay District in 2021:

- The majority of households are occupied by two persons at 36%; and
- The least number of households are occupied by five or more persons at 6%.

Table 3-9: Number of Households by Household Size in Thunder Bay District (2021)

Household Size	Count	Distribution
1 person	21,265	33%
2 persons	23,555	36%
3 persons	8,885	14%
4 persons	7,185	11%
5 persons or more	3,715	6%
Total	**64,605**	**100%**

DRAFT

3.2.3 Housing Conditions

The following subsections describe housing conditions including the numbers of occupied private dwellings built during various periods of construction from 1960 up to 2021, as well as the suitability and conditions of dwellings for Thunder Bay District.

Table 3-11 below presents the total number of occupied private dwellings by period of construction from 1960 up to 2021 in Thunder Bay District:

- Dwellings constructed during the period of 1960 or before is the largest group with 35.3% of private dwellings being built during this period;
- The four periods covering 2001 to 2021 are nearly evenly distributed and comprise 9.7% of occupied private dwellings;
- 90.3% of the occupied private dwellings in the Thunder Bay District were constructed during or prior to 2000; and
- Over the last two decades, 6,290 dwellings were constructed which accounts for less than 10% of the occupied housing stock.

Table 3-11: Occupied Private Dwellings by Period of Construction in Thunder Bay District (2021)

Construction Period	Count	Distribution
1960 or before	22,790	35.3%
1961 to 1980	21,420	33.2%
1981 to 1990	7,930	12.3%
1991 to 2000	6,165	9.5%
2001 to 2005	1,625	2.5%
2006 to 2010	1,575	2.4%
2011 to 2015	1,570	2.4%
2016 to 2021	1,520	2.4%
Total	**64,595**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-12 below presents the suitability of occupied private dwellings in Thunder Bay District in 2021. Dwellings are categorized as either “suitable” or “unsuitable”. Housing suitability assesses the required number of bedrooms for a household based on the age, sex, and relationships among household members according to the National Occupancy Standard (Statistics Canada, 2017b).

- In 2021, 3.2% of the occupied private dwellings in the Thunder Bay District were categorized as unsuitable.

Table 3-12: Occupied Private Dwellings by Suitability in Thunder Bay District (2021)

Suitability	Count	Distribution
Suitable	62,560	96.8%
Not suitable	2,040	3.2%
Total	**64,600**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-13 below presents the conditions of the private dwellings in Thunder Bay District in 2021. Dwellings are categorized as either “only regular maintenance and minor repairs needed” or “major repairs needed”. Dwelling condition refers to whether the dwelling is in need of repairs. This does not include desired remodelling or additions.

The 'regular maintenance needed' category includes dwellings where only regular maintenance such as painting or furnace cleaning is required. The 'minor repairs needed' category includes dwellings needing only minor repairs such as dwellings with missing or loose floor tiles, bricks or shingles; or defective steps, railing or siding. The 'major repairs needed' category includes dwellings needing major repairs such as dwellings with defective plumbing or electrical wiring; and dwellings needing structural repairs to walls, floors or ceilings (Statistics Canada, 2021).

- In 2021, 8.7% of occupied private dwellings in the Thunder Bay District were categorized as requiring major repairs.

DRAFT

Table 3-13: Occupied Private Dwellings by Dwelling Condition in Thunder Bay District (2021)

Dwelling Condition	Count	Distribution
Only regular maintenance and minor repairs needed	58,965	91.3%
Major repairs needed	5,640	8.7%
Total	**64,605**	**100%**

3.3 Community Services

Community services provided to the Métis Nation of Ontario are described in this section using the following indicators:

- Demand for community services; and
- Supply and capacity of community services.

These indicators were selected to provide an understanding of the community services that currently exist and the community services essential for the community (e.g., health care).

Community Services information for the Métis Nation of Ontario has been collected from the Métis Nation of Ontario website (Métis Nation of Ontario, 2024).

3.3.1 Family Services

The following services are available to the families of MNO citizens:

- Métis Nation of Ontario Victim Services Program – provides services to address, deter, and end violence against Métis women and children. Services include: addressing mental, physical, emotional, and spiritual impacts of victimization; culturally grounded support to prevent, deter, and end violence against Indigenous victims and help victims heal.
- Métis Nation of Ontario Community Justice Services Program – provides legal advice and support to members of the Métis Nation of Ontario. Services include: access to alternatives to the criminal justice system, providing legal options and avenues, and assisting clients in accessing legal resources.
- Community Wellness Workers Program – provides a holistic approach to promote healthy living, prevent family violence, and promote healthy lifestyles through culture-based programming.
- Métis Family Wellbeing Program – provides services to prevent family violence through supportive, preventative, and educational activities for families.
- Métis Nation of Ontario Women's Council – a council of Métis women who promote and assists in addressing women's issues and advocates on women's behalf within the Métis Nation of Ontario.

3.3.2 Child Care and Youth Programs

3.3.2.1 Healthy Babies Healthy Children

The following services are available to the MNO citizens and families of MNO citizens:

- Métis Healthy Babies Healthy Children Program – assists children and families to secure that Métis families have the resources and knowledge to live a healthy life.

DRAFT

- Canada Pre-Natal Nutrition Program – helps at-risk Indigenous children 0 to 6 months of age and their families by providing access to resources that support healthy pregnancies and early infant nutrition.
- Community Action Program for Children – helps Métis children at risk and their parents through promoting healthy lifestyle choices, providing access to cultural teachings and community development, and training to live a healthier life.
- Education Support Advocacy Program – provides support for Métis families with youths from kindergarten to grade 12 who are experiencing issues and/or challenges in school.
- Early Learning & Child Care – provides and improves access to culturally grounded early learning opportunities for Métis children and families, through promoting community development and providing opportunities to children to learn off the land and grow within their culture.
- Métis Nation of Ontario Youth Council – a group of youth representatives across Ontario who seek to help Métis youths across the province. The group identifies and addresses issues with Métis youths and promote youth initiatives.

3.3.3 Elder Care

The Aging at Home Program provides support MNO citizen seniors 55 years of age or older through home support and contracted services to help them live independently in their homes.

3.3.4 Health Services

The following services are available to the MNO citizens and families of MNO citizens:

- Mental Health and Addictions Program – provides various mental health and addiction services to Métis children, youth, and adults. Services include case management, mental health and addiction assessment, individual counselling, family therapy and parent coaching, addictions counselling, and psychiatric / psychology / psychotherapy services.
- Gaming & Gambling Awareness Program – provides services to improve the quality of life of others and promote positive change and life balance. Services include interactive workshops, training, assessments, brief counselling, and other mental health supports.
- Community Support Services Program – provides information, advocacy, and practical support for individuals that remain in their homes and require a caregiver. Services include friendly visitations from Métis Nation of Ontario staff and volunteers, medical transportation services, and caregiver services.
- Anti-Human Trafficking Program – provides support to communities through community engagement to raise awareness of human trafficking and provide information and resources to combat human trafficking.
- Diabetes Awareness Strategy – a project that provides resources and information about diabetes risk factors and complications to Métis people. Services include medical diagnosis of diabetes, financial support for dialysis appointments, resources to mitigate diabetes, and community education resources on diabetes.
- Cancer Care – Métis Nation of Ontario works with Ontario Health's Indigenous Cancer Care Unit to reduce inequities in care and access to cancer services. Services includes breast cancer, lung cancer, cervical cancer, and colorectal cancer.
- Health Research Initiatives & Projects – the MNO undertakes research projects every year to understand the health needs of the Métis people. Projects include the ongoing Chronic Disease Surveillance Program, Our Health Counts Program, Youth Identity Project, Indigenous Knowledge Network Initiative, and the Healthy Messaging Project.

DRAFT

3.3.5 Cultural Services

3.3.5.1 Family Well-Being Program

The Métis Family Wellbeing (MFWB) Program is offered to MNO citizens and the families of MNO citizens by the Métis Nation of Ontario (MNO) and is funded by the Ministry of Children, Community and Social Services. The purpose of the Program is to prevent and disrupt the cycle of violence in Métis families though supportive, preventative, and educational activities for children and youth ages 0 – 18 and their families.

The Program aims to deliver a range of family-oriented initiatives to support Métis families addressing issues such as healing from violence, managing children under family services' care, or dealing with youth involved in the justice system. MFWB Coordinators within the Program strive to create personalized wellness plans tailored to the unique needs of each individual. Subsequently, these coordinators facilitate access to peer counseling, offer advocacy and referral services, assist clients in navigating systems, and connect them with traditional knowledge and practices. These interventions are available in both one-on-one and group settings, designed to steer children and youth away from high-risk behaviors. Additionally, the Program organizes educational gatherings accessible to the community, conducted in culturally safe spaces established by the Program (Métis Nation of Ontario, 2023).

3.3.6 Recreational Services

MNO Educational and Cultural Camps provide various seasonal, educational, and cultural camps and retreats to Métis children and youth in Ontario. Participants learn about Métis history, life, and culture, and get involved in cultural activities to strengthen and share Métis culture.

3.4 Education and Training Services and Facilities

This section describes the existing conditions of education and training services and facilities for the Métis Nation of Ontario using the following indicators:

- Demand for community education and training services;
- Supply and capacity of community education and training services; and
- Learning of traditional knowledge, which includes culture, language, and Natural Laws.

Information on education and training services and facilities of communities was collected from Statistics Canada, municipal and provincial government websites, and research studies.

Métis Nation of Ontario has several education and training programs to support Métis citizens. The K-12 Education initiative provides support to families with youth who are within the K-12 school environment (Métis Nation of Ontario, 2023f). The support can include toolkits and resources to parents and teachers that are tailored towards Indigenous children and families (Métis Nation of Ontario, 2023g). The Post Secondary Education program helps Métis members access Post Secondary education. This includes scholarships and bursaries, assistance with navigating the transition to post secondary, and tutoring program (Métis Nation of Ontario, 2023h). Métis Nation of Ontario has an Early Learning and Child Care Program which provides resources for families to assist with early learning and development. This includes camps, programs and events. A virtual Métis Early Learning Camp is hosted by Métis Nation of Ontario for members between 3-12 years old (Métis Nation of Ontario, 2023i). Métis Nation of Ontario hosts an employment program to assist members in training in specific areas and with summer career placements in the private, public and non-profit sector (Métis Nation of Ontario, 2023j). This program has services that include career counselling, wage subsidies, employment training, and youth initiatives (Métis Nation of Ontario, 2023k). Métis Nation of Ontario has an educational and cultural camp initiative. A variety of seasonal, educational and cultural camps and retreats are hosted by Métis Nation of Ontario and these provide participants an opportunity to learn more about Métis history and culture (Métis Nation of Ontario, 2023l). The Métis Languages Initiatives supports the advancement of the Michif language within Ontario and has language resources that can be utilized to learn and develop knowledge of the Michif language (Métis Nation of Ontario, 2023m).

DRAFT

3.5 Emergency and Protective Services

The Socio-Economic Baseline includes a description of the following emergency and protective services where information is available within the communities:

- Police;
- Fire; and
- Emergency Medical Services.

The Métis Nation of Ontario does not provide emergency and protective services. These services are provided by provincial, regional and municipal service providers.

Presented below are municipal services in the RSA within the District of Thunder Bay.

Table 3-14: Municipal Emergency and Protective Services within MNO Region 2

Municipality	Emergency and Protective Services
Thunder Bay	**Police:** Thunder Bay Police Service provides police service to Thunder Bay (Thunder Bay Police Service, 2023). **Fire:** Thunder Bay Fire Rescue provides fire emergency services from various fire stations throughout the city (Thunder Bay, 2023). **EMS:** Superior North EMS provides emergency medical services for the District of Thunder Bay. There are 19 EMS stations throughout the district with 230 people employed (Superior North EMS, 2023).
Greenstone	**Police:** OPP provides police service to Greenstone (NorthWest Healthline – Greenstone Detachment, 2022). **Fire:** The Greenstone Fire Department provides prevention and protection services from four fire stations, and responds to fire alarms, fires and auto extrication/rescues. The department utilizes Volunteer District Chiefs and has a compliment of approximately 70 Volunteer Officers and Firefighters (Greenstone Fire Department, 2023). **EMS:** Superior North EMS provides emergency medical services for the District of Thunder Bay, which includes Greenstone. There are 19 EMS stations throughout the district with 230 people employed (Superior North EMS, 2023).

DRAFT

3.6 Community Infrastructure

The socio-economic baseline includes a description of the following Community Infrastructure (based on available information):

- Drinking Water;
- Wastewater Plants;
- Electricity Supply; and
- Solid Waste Management.

Existing community infrastructure is limited within the RSA First Nation reserves and generally requires minor to significant upgrades to meet health standards. Four First Nation reserves within the RSA have long-term drinking water advisories. Where information is available, community input indicates the need for upgraded community infrastructure to address Socio-Economic challenges experienced within the communities including boil water advisories and wastewater facilities that meet federal guidelines. The larger regional cities and towns do not have the same Community Infrastructure issues that the RSA Indigenous communities face.

The Métis Nation of Ontario does not manage community infrastructure. Métis Nation of Ontario citizens access services through provincial, regional and municipally based service providers. Regional municipalities in the District of Thunder Bay included in the RSA are described in Table 3-15.

Table 3-15: Utilities in the Regional Municipalities

Community	Water	Wastewater	Energy	Solid Waste
Thunder Bay	Bare Point Water Treatment Plant.	Atlantic Avenue Water Pollution Control Plant.	Synergy North (electrical). Enbridge Gas (natural gas).	Thunder Bay Solid Waste & Recycling Facility.
Greenstone	The Municipality owns water treatment facilities in Beardmore, Caramat, Geraldton, Longlac, and Nakina. All of these treatment systems are operated and maintained by Ontario Clean Water Agency.	The Municipality owns wastewater treatment facilities in Beardmore, Caramat, Geraldton, Longlac, and Nakina. All of these treatment systems are operated and maintained by Ontario Clean Water Agency.	Hydro One (electrical). Enbridge Gas (natural gas).	Environmental screening process underway for new landfill site in Beardmore. Landfill in Geraldton is closed but the landfill in Longlac is servicing Geraldton. Longlac and Nakina landfills are operating at 57% and 50% capacity as of September 2020 and December 2021, respectively.

3.7 Transportation

The socio-economic baseline includes a description of the following details on transportation where information is available.

- Road Transportation Network;
- Road Traffic Volumes;
- Vehicle Collisions;
- Air Transportation; and
- Waterways.

Communities described in the socio-economic baseline include both Indigenous communities that are fly-in, those connected to the provincial highway system, and municipalities that have well connected transportation systems.

There is an array of multimodal transportation infrastructure available within MNO Region 2, including the rail network, the provincial highway system, other all-season roads, winter roads, and airports (municipal, remote and international) (IBI Group & Hemson Consulting Ltd, 2016).

The Métis Nation of Ontario in Region 2 is integrated with the multimodal transportation systems that describes the region, and road transportation network, road traffic volumes, vehicle collisions and air transportation is not described in detail for northwestern Ontario for the purposes of the EA/IA.

DRAFT

3.7.1 Waterways in Métis Nation of Ontario

The Métis Nation communities in Ontario were largely established along waterways and the Upper Great Lakes in connection with the fur trade. Waterways were integral to the Métis people and communities, and continue to be an important part of Métis culture, identity and traditional use of lands and resources. Historically, Métis communities developed interconnected Métis populations at Michipicoten, Pic River, Fort William, Nipigon House, and Long Lake (Métis Nation of Ontario, 2017a).

The Métis Nation of Ontario asserts Indigenous rights in its Lakehead/Nipigon/Michipicoten traditional territory which includes the historical places and areas named above.

3.8 Community Well-Being and Safety

One comparative measure of community well-being is the Community Well-Being (CWB) Index. The CWB uses four key Socio-Economic factors (education, income, labour and housing) to measure well-being of different communities across Canada and throughout time. For each community, a score is calculated for each of the four Socio-Economic factors, as well as an overall well-being score based on a combination of all these factors, which is used to compare well-being among Indigenous communities, and between Indigenous communities and non-Indigenous communities. The data come from the Census of Population and the data presented in this section are based on the 2016 data (most recent dataset) (Statistics Canada, 2017a). It is important to note that “well-being” means different things to different people and the scores from the CWB are only aspect in scoring the well-being of a community. The four factors used to score the CWB are used as they are important topics that are part of people’s overall “well-being.”

The four socio-economic factors used in the scoring of the CWB:

- Education - based on how many community members have at least a high school education and how many have acquired a university degree;
- Labour Force Activity - measures how many community members participate in the labour force and how many labour force participants have jobs;
- Income - calculated based on a community's total income per capita; and
- Housing - based on the number of community members whose homes are in an adequate state of repair and are not overcrowded.

From an Inninuwuk perspective, community well-being is also considered within the context of Mino-Bimaadziwin, which translates to the ‘Good Life’. There are many ways to achieve Mino Bimaadziwin including social, economic, cultural vibrancy and physical well-being which looks far into the future, while considering the past, on both individual and collective levels which includes the environment. The Webequie First Nation CCP includes indicators to measure competency across a number of areas, including: Education and Training; Cultural Vibrancy/Traditional Life, Language retention; Housing and Infrastructure; Environmental Quality/Relationship with the Land, Community Health and Wellness; Family and Social Conditions; Economic Development; Community Leadership and Governance.

Those items are measured through a variety of ways, including graduation rates; housing inventory, waiting list and overcrowding in homes, diversity of homes; local healthcare and social statistics, addictions program numbers, participation in On-Land Healing Initiatives; Employment, self-employment and Ontario Works rates; updated Band policies, frequency of Band communications.

CWB Indices are not available for the Métis Nation of Ontario citizen population since these values are only available from Census of Population data.

DRAFT

ECONOMIC ENVIRONMENT

DRAFT

AtkinsRéalis - Confidential

4. Economic Environment

4.1 Labour Force and Employment

Indigenous people are under-represented in Canada's labour market (Anderson, 2019). This section describes the existing conditions of labour force and employment using the following indicators:

- Labour force characteristics, including employment, age, population, labour force participation, unemployment, barriers to employment, time spent on unpaid domestic work;
- Education and training attainment, including highest certificate, diploma, or degree, field of study, occupations, training opportunities; and
- Labour income, including income, sources of income.

Tradition is an important cultural piece in Indigenous communities who are very connected to the lands on which they live. This means there are specific guidelines for where economic activity can occur and how lands are used.

The traditional economy is another important cultural aspect within the communities. Unfortunately, traditional economy activities are not widely reported on and therefore it is difficult to quantify the economic impact they have within the communities.

4.1.1 Labour Force Characteristics

Table 4-1 presents the forecasted working age population in the Thunder Bay District over the projection period, 2021 to 2043. The values for 2016 and 2021 are published statistics from the 2016 and 2021 Statistics Canada Census of Population (Statistics Canada 2017, 2022a). The values for 2028, 2023, and 2043 were forecast based on the 2016 and 2021 data. The working age population is defined as those aged 15 to 64:

- The working age population is decreasing over the projection period from 2016 to 2043; and
- Based on current growth trends, the working age population is forecasted to decrease through the same projection period by 14,346 between 2016 and 2043, a decline of approximately 15%.

Table 4-1 : Projected Working Age Population in Thunder Bay District (2016, 2021, 2028, 2033, 2043)

Year	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
2016	95,930	100%	47,935	50.0%	47,990	50.0%
2021	93,095	100%	46,665	50.1%	46,430	49.9%
2028	89,266	100%	44,943	50.3%	44,331	49.7%
2033	86,628	100%	43,753	50.5%	42,890	49.5%
2043	81,584	100%	41,465	50.8%	40,147	49.2%

Source: Statistics Canada, 2017; 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 4-2 presents the breakdown of the population in the labour force and those not in the labour force for Thunder Bay District in 2021.

DRAFT

Table 4-2: Labour Force Participation in in Thunder Bay District (2021)

Labour Force Participation	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
In the labour force	70,930	100%	36,660	51.7%	34,270	48.3%
Not in the labour force	51,825	100%	24,080	46.5%	27,740	53.5%

Table 4-4 presents the number of jobs by 1-digit National Occupational Classification (NOC[1]) code for 2018 and 2022 in Thunder Bay District.

- Sales and service occupations is the leading job category in the Thunder Bay District with 17,113 jobs in 2022 which accounts for 25.6% of the total jobs;
- The Thunder Bay District has seen an increase in 6 occupational categories between 2018 and 2022 with an overall increase in jobs of 2% over the 4 years; and
- The occupational category with the largest percentage increase over the period was health occupations with a 21% increase.

DRAFT

[1] The National Occupational Classification (NOC) is Canada's national system to identify and categorize occupations based on the training, education, experience and responsibilities they require. The structure of NOC codes is hierarchical with five levels. The first level (1-digit) contains 10 broad occupational categories, the second level (2-digit) is made up of 45 major groups, the third level (3-digit) consists of 89 sub-major groups, the fourth level (4-digit) gathers 162 minor groups, and the last level (5-digit) comprises 516 unit groups.

Table 4-4: Thunder Bay District – Occupations by Category (2018 – 2022)

Occupation Categories	2018 Jobs	2022 Jobs	2018 – 2022 Change	2018 – 2022 % Change
Business, finance and administration occupations	8,931	9,215	284	3%
Natural and applied sciences and related occupations	3,808	4,121	313	8%
Health occupations	6,066	7,320	1,254	21%
Occupations in education, law and social, community and government services	9,052	9,374	322	4%
Occupations in art, culture, recreation and sport	1,041	942	(99)	(10%)
Sales and service occupations	17,902	17,113	(789)	(4%)
Trades, transport and equipment operators and related occupations	10,780	11,033	253	2%

4.1.2 Education and Training Attainment

There is high value placed on principles and teachings passed down by Elders and Knowledge Keepers. These teachings take place in community and out on the land. The knowledge passed on from the ancestors sustains the Métis identity and way of life.

Table 4-5 presents the highest level of western educational attainment for the population aged 15 years and over in private household in Thunder Bay District for 2021.

- The majority of the population has a certificate, diploma, or degree at 54.2%; and
- 18% of the Thunder Bay District does not have a certificate, diploma, or degree, males make up 51.2% and females account for 48.8%.

Table 4-5: Highest Certificate, Diploma or Degree for the Population Aged 15 Years and Over in Private Households in Thunder Bay District (2021)

Highest Level of Education	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
No certificate, diploma or degree	22,050	18.0%	11,360	18.7%	10,685	17.2%
High (secondary) school diploma or equivalency certificate	34,135	27.8%	17,035	28.0%	17,100	27.6%
Postsecondary certificate, diploma or degree	66,565	54.2%	32,340	53.2%	34,220	55.2%

DRAFT

Table 4-6 presents the major fields of study for the Thunder Bay District's population aged 15 and over who had obtained a postsecondary education as of 2021.

- The major fields of study most commonly studied were architecture, engineering, and related trades which includes but is not limited to construction trades, precision production, mechanic and repair technology, engineering, and historic preservation and conservation;
- The most commonly pursued fields of study for males were architecture, engineering, and related trades; and
- The most commonly pursued fields of study for females were health and related fields.

DRAFT

4.1.3 Labour Income

Table 4-7 presents the total individual income by group for the population aged 15 and over for 2020 in Thunder Bay District by self-identified gender.

- The largest individual income group for both male and female is $20,000 to $29,999 with 12.7% and 16.6%, respectively;
- The smallest individual income group for both male and female is $150,000 and over with 3.9% and 1.2%, respectively;
- In 2020, there were 1,615 more females than males with individual incomes; and
- In 2020, 74.8% of females were making under $60,000 while only 61.4% of males were within this group.

Table 4-7: Total Individual Income by Group for the Population Aged 15 Years and Over in Private Households in Thunder Bay District (2020)

Income Group	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
Under $10,000 (including loss)	8,235	6.9%	3,645	6.2%	4,590	7.6%
$10,000 to $19,999	13,570	11.4%	5,610	9.6%	7,960	13.2%
$20,000 to $29,999	17,420	14.7%	7,410	12.7%	10,005	16.6%

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

DRAFT

4.2 Overall Economy

Existing conditions of the overall economy in the Thunder Bay District are described in this section using the following indicators:

- Gross Domestic Product (GDP);
- Cost of living;
- Economic development, including economic development initiatives, capacity, gaps, major projects, new projects, closures, equipment availability, energy profile, access to capital and trends;
- Traditional economy; and
- Access, ownership, and use of lands, including municipal zoning, land area, land-use planning documents from MNRF, Indigenous communities and municipalities (if relevant), plans for land development, compatibility with existing and proposed land uses.

4.2.1 Gross Domestic Product (GDP)

GDP is a monetary measure of the market value of all the final goods and services produced and sold in a specific time period, typically expressed annually, within a specified geographical region. This section describes the GDP, including the annual GDP and changes in GDP for the Thunder Bay District. The information provided in this section will help identify potential effects of the Project on GDP.

Table 4-9 presents the GDP for the Thunder Bay District between 2016 and 2021 (Statistics Canada, 2022a).

- Between 2016 and 2021 there was an approximate growth in GDP of 4% in the Thunder Bay District; and
- GDP is growing at a constant rate over the period between 2016 and 2021.

Table 4-9: Total Household Income Groups for Private Households in Thunder Bay District (2020)

Year	2016	2017	2018	2019	2020	2021	2016 – 2021 Change	2016 – 2021 % Change	Income Group
GDP	4,564	4,575	4,616	4,658	4,700	4,744	180	3.9%	Under $5,000

Source: Statistics Canada, 2022a.

4.2.2 Cost of Living

The cost of living in the Thunder Bay District is considerably lower than other major Canadian cities. The District of Thunder Bay was ranked number 1 out of 227 major urban international cities for affordable housing. According to the 2018 Rental Market Report, renting a two-bedroom in the District costs and average of $1,037 per month, approximately $600 less than Vancouver. A one-bedroom apartment averages $883, 58% less than Toronto (Webster, N.A.). Cost of living information specific to Métis Community Councils is not compiled by Statistics Canada.

While Thunder Bay ranks well in comparison to other major Canadian cities, that does not make it affordable. The Market Basket Measure (MBM) threshold for Thunder Bay is $44,300 per year (Krysowaty, 2021). The MBM refers to Canada's official measure of poverty based on the cost of a specific basket of goods and services representing a modest, basic standard of living developed by Employment and Social Development Canada (ESDC). The MBM thresholds represent the costs of specified qualities and quantities of food, clothing, shelter, transportation, and other necessities for a reference family of two adults and two children (Krysowaty, 2021).

Table 4-10 present the number of households spending 30% or more of income on shelter costs for Thunder Bay District in 2021. According to the Canada Mortgage and Housing Corporation (CMHC) housing is considered to be affordable when a household spends less than 30% of its pre-tax income on adequate shelter. Households that spend more than 30% of their income on shelter are deemed to be in core housing need (Canada Mortgage and Housing Corporation, 2020).

Of the nearly 63,000 owner or tenant occupied dwellings in the Thunder Bay District, 14% are spending more than 30% of their income on shelter costs (Statistics Canada, 2022a).

DRAFT

Table 4-10: Distribution of Households Spending 30% or More of Income on Shelter Costs for Thunder Bay District (2021)

Household Spending on Shelter Costs	Count	Distribution
Spending less than 30% of income on shelter costs	53,940	86%
Spending 30% or more of income on shelter costs	9,045	14%
Total Owner and Tenant Households	**62,985**	**100%**

Source: Statistics Canada, 2022a.

4.2.3 Economic Development

The Thunder Bay District is a census division in Northwestern Ontario. It is comprised of 34 census subdivisions which includes 18 Indigenous communities. The City of Thunder Bay represents nearly 75% of the Thunder Bay District population. Due to its size, the City of Thunder Bay drives a lot of the economic activity and growth within the District.

The Métis Nation of Ontario developed a holistic economic development strategy in 2008, based on their key objective: "prosperity and economic self-sufficiency within the Métis Nation". The MNO has retained policy, legal and tax advice about funding from Ontario and Canada to develop a "best practices" model to cater to MNO's requirements and needs. The key components of the MNO Economic Development Strategy are as follows (Métis Nation of Ontario, 2011a):

- Debt reduction: In 2008, the incoming MNO leadership inherited a substantial debt and an outdated structure for financial administration. Over the last number of years, MNO leadership reduced the outstanding debt by over 80 per cent under structured debt repayment arrangements made with all outstanding creditors.
- Métis Voyageur Development Fund (MVDF): In 2010, flowing from the MNO-Ontario Framework Agreement, the MNO negotiated an MOU and a 10 year, $30 million agreement, with Ontario to provide equity and investment in Métis businesses supporting the resource sector. The MVDF has achieved significant success since its inception.
- Economic Development Law: In 2014, the MNO Annual General Assembly passed the Métis Nation of Ontario Prosperity and Self-Sufficiency Law, which sets out the legal framework for the MNO approach to economic development.
- Infinity Investments: In 2015, the Infinity Investments structures were completed, implementing the requirements of the Economic Development Law and organizing all of the MNO's economic development activity so it can be managed by a professional, independent Board of Directors and Chief Executive Officer.
- MNO's Métis Self-Employment Program offers participants the skills and support necessary to develop a business plan, start a small business, and sustain their business activities. The Program also provides funds and support to assist clients with mentorship, coaching, and ongoing technical advice.

4.2.4 Traditional Economy

A traditional economy is a system that relies on customs, history, and time-honored beliefs. Tradition guides economic decisions such as production and distribution. Communities with traditional economies depend on agriculture, fishing, hunting, gathering, or some combination of them (Amadeo, 2022).

The traditional economy is an important cultural aspect of the Métis community. This section is intended to describe the traditional Métis economy in Ontario. Unfortunately, traditional economic activity is typically not captured by commonly used data sources, so it is difficult to provide a complete picture of the traditional Métis economy and labour market in Ontario.

The Project Team will work with MNO Region 2 to collect information about their traditional economy as applicable to the Project. As collected, this information will be used to support an analysis of community concerns and potential effects of the Project on the traditional Métis economy.

DRAFT

4.3 Business Environment

4.3.1 Local Economy

Table 4-11 presents a breakdown of all 21 industries based on 2-digit North American Industry Classification System (NAICS[2]) codes and their presence within the geographical boarders of the Thunder Bay District in 2018 and 2020. Trends of industry presence in Thunder Bay District between 2018 and 2022 are summarized as follows:

- Thunder Bay District is heavily reliant on imports to meet supply chain needs with 40% of purchases being imported.
- For Thunder Bay District, the industry providing the largest number of jobs is public administration;
- As of 2022, there are nearly 4,000 jobs in the construction industry in the Thunder Bay District;
- The Thunder Bay District had the highest total supply chain purchases (approximately $4.9 billion in 2020), while the Kenora District had the lowest (approximately $2.7 billion in 2020);
- The Thunder Bay District had the highest total demand in 2020 (approximately $13.85 billion), while the Kenora District had the lowest (approximately $7.26 billion);
- The industries with the highest growth between 2018 and 2022 include management of companies and enterprises (93%) and professional, scientific, and technical services (24%); and
- 11 of the 21 reported industries saw a decline in jobs between 2018 and 2022.

Table 4-11: All Industry Presence in Thunder Bay District (2018 – 2022)

Industry	2018 Jobs	2022 Jobs	2018 – 2022 Change	2018 – 2022 % Change
Agriculture, forestry, fishing and hunting	976	866	(111)	(11%)

[2] The North American Industry Classification System (NAICS) is the standard used by Federal statistical agencies in classifying business establishments for the purpose of collecting, analyzing, and publishing statistical data. The structure of NAICS is hierarchical with five levels, level 1 having 2-digits and level 5 having 6 digits. As the level increases the classification becomes more detailed.

DRAFT

Table 4-12 presents the industry supply chain, the purchases an industry makes from all other industries, in the Thunder Bay District in 2020. This table displays the value and percentage of in-region purchases and imported purchases for 2020 that are summarized as follows:

- 40% of supply chain purchases are made within the Thunder Bay District;
- The industry with the highest percentage of in-region purchases is health care and social assistance at 65%;
- The industry with the lowest percentage of in-region purchases is management of companies and enterprises at 10%; and
- Total supply chain purchases amounted to approximately $4.9 billion in 2020.

Table 4-12: Industry Supply Chain, Thunder Bay District (2020)

Industry	In-region Purchases	% In-region Purchases	Imported Purchases	% Imported Purchases	Total Purchases
Agriculture, forestry, fishing and hunting	$93,114,000	50%	$94,071,633	50%	$187,185,633

DRAFT

Table 4-13 presents the regional requirements, the value of goods and services demanded of the Thunder Bay District by industry in 2020. Regional requirements show the value of goods/services purchased from an industry (either in or outside the area) in order to meet the needs of the area. The table presents the level of demand for each industry met in-region and the demand met by imports that are summarized as follows:

- Approximately one third of demand for goods and services is met in-region (30.5%);
- There are 4 industries meeting over 60% of demand within region: Other services (except public administration) (64.6%), accommodation and food services (63.7%), utilities (62.3%), and retail trade (62%);
- Only one industry (management of companies and enterprises) meet less than 10% of demand within region; and
- The total demand in 2020 was approximately $13.85 billion.

Table 4-13: Regional Requirements to Meet Demand by Industry in Thunder Bay District (2020)

Industry	In-region Purchases	% In-region Purchases	Imported Purchases	% Imported Purchases	Total Purchases
Agriculture, forestry, fishing and hunting	$93,114,000	50%	$94,071,633	50%	$187,185,633

DRAFT

4.3.2 Mining, Aggregate and Forestry Activities

Table 4-14 presents industry data for the following 2-digit NAICS[3] industries in Thunder Bay District between 2018 and 2022 (Lightcast, 2023b):

- Mining, quarrying, and oil and gas extraction; and
- Agriculture, forestry, fishing, and hunting.

Each industry includes a variety of occupations which include but are not limited to:

- Non-metallic mineral mining and quarrying;
- Coal mining;
- Construction, forestry, mining, and industrial machinery, equipment and supplies merchant wholesalers;
- Support activities for forestry; and
- Forest nurseries and gathering of forest product.

It should be noted that activities associated with the traditional economy such as fishing and hunting may not be captured within this data. It is likely that these industries are underreported within Indigenous communities.

Included in this data are location quotients for 2018 and 2022 for each industry. Location quotients are ratios which help to quantify how concentrated a particular industry is in a specified geographic region in comparison to the nation. Location quotients above 1 indicate that an industry is more concentrated than the typical region. Industries with high location quotients are often those that are exporting a lot of goods and services out of the community (Lightcast, 2020).

- The mining, quarrying, and oil and gas extraction industry declined by 108 jobs between 2018 and 2022;
- The location quotient for the mining, quarrying, and oil and gas extraction industry indicates that the concentration of jobs within the industry is above the national average;
- The agriculture, forestry, fishing, and hunting industry declined by 40 jobs between 2018 and 2022; and
- The location quotient for the agriculture, forestry, fishing, and hunting industry indicates that the concentration of jobs within the industry is below the nation average with 0.96 in 2018 and 0.93 in 2022.

Table 4-14: Mining, Quarrying, and Oil and Gas Extraction Industry in Thunder Bay District (2018 – 2022)

Industry	2018 Jobs	2022 Jobs	2018 – 2022 Change	2018 – 2022 % Change	2018 Location Quotient	2022 Location Quotient
Mining, Quarrying, and oil and gas extraction	1,262	1,154	-108	(9%)	1.6	1.5
Agriculture, forestry, fishing and hunting	651	611	-40	(6%)	1.0	0.9

TRADITIONAL INDIGENOUS LAND AND RESOURCE USE

DRAFT

AtkinsRéalis - Confidential

5. Traditional Métis Land and Resource Use

5.1 Sites and Areas Used for Traditional Activities

Indigenous communities customarily use the lands and the resources of their traditional territories for various purposes related to traditional practices which include lakes and rivers for fishing and trapping corridors and trails for hunting and trapping. Many Indigenous communities rely on traditional practices, such as fishing and hunting as a source of food and income. As such, it is important to identify areas where traditional practices are used, to determine potential effects of the Project on Indigenous communities and their traditional use of lands and resources.

The Métis Nation of Ontario has developed a province-wide Métis Traditional Land Use or Métis Way of Life Framework to collect Métis Traditional Knowledge and help gain a better understanding of Métis interests, rights, harvesting patterns, and land use. The Métis Way of Life Framework approach has been implemented through numerous Métis Nation of Ontario led studies to document traditional use of lands and resources as part of environmental assessment (EA)/impact assessment (IA) processes throughout Ontario, including in the RSA of the Project. These studies are typically not publicly available.

In general, Métis harvesting of resources includes plants, fish, wildlife and firewood, taken for heating, food, medicinal social or ceremonial purposes (Métis Nation of Ontario, 2011b). Métis Nation of Ontario citizens harvest sustainably for use by the Métis community in the Métis Nation of Ontario region where they reside.

5.2 Culturally and Spiritually Important Sites and Areas

Many Indigenous communities have identified culturally and spiritually important sites and areas including travel routes, burial sites, and gathering sites. These areas are important to Indigenous communities as the sites hold historical value and allow members to spiritually connect with their ancestors through traditional ceremonies and activities. Some of these areas are only accessible by limited routes, which may also only be available during specific seasons (i.e., summer and winter roads); impacts to these travel routes may affect accessibility to culturally and spiritually important sites and areas. Identifying these areas will help determine the potential effects of the Project on culturally and spiritually important sites and areas.

As noted above, the Métis Nation of Ontario has developed a province-wide Métis Traditional Land Use or Métis Way of Life Framework to collect Métis traditional knowledge and help gain a better understanding of Métis interests, rights, harvesting patterns, and land use. The Métis Way of Life Framework approach has been implemented through numerous Métis Nation of Ontario led studies to document traditional use of lands and resources as part of Environmental Assessment (EA)/Impact Assessment (IA) processes throughout Ontario, including in the RSA of the Project. These studies are typically not publicly available.

DRAFT

NON-TRADITIONAL LAND AND RESOURCE USE

DRAFT

AtkinsRéalis - Confidential

6. Non-Traditional Land and Resource Use

This section summarizes a baseline of Non-Traditional Land and Resource Use. This includes land use plans and policies, community-based land use planning, industrial and commercial land use, outdoor recreation and tourism, and provincial parks and protected areas. Non-Traditional land use also includes the designating of lands through federal, provincial or municipal authorities for a specific use. Baseline information was developed through a desktop review of existing information, federal and provincial mapping databases, federal and provincial policy and regulation review and secondary data. Secondary data included a review of recreation and tourism websites, municipalities websites and news articles.

6.1 Indigenous Homelands

It is acknowledged that the Project study areas are situated within the traditional lands of the Anishiniimowin/ Anishinaabe/ Mushkeego and homelands of the Métis Peoples. “The Anishiniimowin/ Anishinaabe/ Mushkeego Peoples have called the lands of the James Bay Treaty home since time immemorial. The Mushkeego live mainly in the James Bay and Hudson Bay lowlands, while the Anishiniimowin and Anishinaabe traditionally live mainly in the interior, closer to the height of land that divides the James Bay and Hudson Bay watershed with those to the south.” (Ministry of Public and Business Service Delivery, 2023). The Métis homelands are also present within the James Bay Treaty area. The Anishiniimowin/ Anishinaabe/ Mushkeego and Métis peoples are stewards of the land and hold the inherent right of self-determination that is recognized and affirmed under Section 35 of the *Constitution Act*, 1982. Canada has recently developed an Action Plan to implement the United Nations Declaration on the Rights of Indigenous Peoples (The United Nations, 2007). The five-year Action Plan (2023-2028) outlines and affirms as well as respects the inherent rights of Indigenous Peoples as they relate to lands, territories and resources, and autonomy.

6.2 Treaty Lands

Treaties are agreements made between the Government of Canada, Indigenous Nations and often provinces and territories that define ongoing rights and obligations on all sides. These agreements set out continuing Treaty Rights and benefits for each Indigenous Nation (CIRNAC, 2023).

Treaties with Indigenous Nations in Ontario include both:

- Historic (numbered) treaties with Indigenous Nations;
- Modern treaties, also called comprehensive land claim agreements with Indigenous Nations; and
- Specific claim agreements to address past grievances.

The Project is within land covered by Treaty No. 9 (CIRNAC, 2013). The Treaty No. 9 area covers approximately two--thirds of Ontario’s total landmass and includes:

> *“that portion or tract of land lying and being in the province of Ontario bounded on the south by the height of land and the northern boundary of the territory ceded by the Robinson Superior Treaty of 1850, and the Robinson Huron Treaty of 1850, and bounded on the east and north by the boundaries of the said province of Ontario as defined by law and on the west by a part of the eastern boundary of the territory ceded by the Northwest Angle Treaty No. 3.” (Crown-Indigenous Relations and Northern Affairs, 2013).*

Treaty No. 9 was signed between the Anishiniimowin/Anishinabe/Mushkeego Peoples and the Crown in 1905-1906, with adhesions in 1929-1930. The Treaty contains a number of provisions including cash payments, the creation of reserves, education funds for schools and teachers, etc. With the signing of the Treaty, the Crown sought to extinguish First Nations title to the land. Treaty No. 9 also outlines traditional pursuits such as hunting, fishing and trapping that could continue, subject to federal regulations and “exceptions for settlement, mining, lumbering, trading or other purposes.” (Ministry of Public and Business Service Delivery, 2023).

DRAFT

In April 2023, leaders from 10 Treaty No. 9 First Nations announced a lawsuit against the Ontario and Canadian governments that could fundamentally change decision-making authority in the Treaty No. 9 territory (CBC News, 2023). The First Nations leading the lawsuit intend to establish co-jurisdiction in the Treaty No. 9 territory that would require consent of Indigenous Nations' way of life impacted by resource development.

The draft statement of claim mentions the objectives of Indigenous Signatories to the Treaty intended "to preserve bimaadiziwin in Ojibwe or pimaatisiium in Cree – happiness, prosperity, and protection of their traditional way of life" (APTN News, 2023). Mino-Bimaadiziwin translates to "into living a complete, healthy, and good life" which represents an Indigenous philosophy for a way of living (Thomas, 2020). Some of the key principles of Mino-Bimaadiziwin are to maintain a sacred relationship with all elements of creation including trees, fish, birds, animals, water, plants, people, and everything else provided by the Creator, and to live in harmony and coexistence. Mino Bimaadiziwin and other Indigenous laws represent Indigenous identity, outlining the roles, duties, and obligations of being a member of an Indigenous Nation (Thomas, 2020).

6.3 Reserves

The *Indian Act*, R.S.C., 1985, c.I-5, states that land on reserves is owned by the Crown (Government of Canada) but it is given to the First Nation or the Band to hold and use as a tenant. This legal structure (to be a tenant on land owned by the Crown) is shared between community members collectively which provides a beneficial interest in the land. Under the *Indian Act*, a reserve means a tract of land of which is vested with His Majesty (Government of Canada) that has been set apart by His Majesty for the use or benefit of the Band. Section 81(1) sets out the by-laws which govern the authority of the Band Council and includes by-laws related to land use, zoning, the environment, and other works. These by-laws only apply on-reserve. On many reserves, if land is legally given to a Band member, a certificate of possession or certificate of occupation is granted. The certificate grants the individual(s) rights of possession or occupation of the property for housing, business, or resource extraction. Under the *Indian Act*, this requires the approval of the Minister of Indigenous Services.

6.4 Crown Land

The Project is proposed to be located primarily on provincial Crown land and will require access to, and the development, use and occupation of lands and resources which are currently used for traditional activities by Indigenous communities. Crown land is used to describe land owned by federal or provincial governments under the *Public Lands Act* (Section 6.5.1).

As described in Section 5, traditional activities of Indigenous communities include hunting, fishing, trapping, and gathering, as well as cultural and spiritual activities, which may occur on Crown land.

Given the location of the Project, land designated under the *Far North Act*, *2010* may be subject to community-based land use plans (CBLUPs) initiated by Indigenous communities.

6.5 Provincial Plans and Polices

6.5.1 Public Lands Act

The Ontario *Public Lands Act* provides the Ministry of Natural Resources and Forestry (MNRF) the authority to manage Crown land. Crown land occupies approximately 87% of all land and water in Ontario with 95% of northern Ontario considered Crown Land (MNRF, 2023). The *Public Lands Act* outlines the use, management, sale and disposition of public lands and forests (Ontario, 2022). The Act guides Ontario's public land use planning and development, regulating public and private roads on public lands.

DRAFT

6.5.2 The Planning Act

The Ontario *Planning Act* is provincial legislation that sets out the ground rules for land use planning. The *Planning Act* outlines how land may be used and controlled and the purpose of this Act is to make sure that planning processes are fair, open, accessible, timely, efficient and promote the best economic and environmental interest within the provincial policy framework. The *Planning Act* allows the province to integrate matters of provincial interest into municipal and regional planning decisions by requiring that all decisions that are made are in conformance with provincial plans.

6.5.3 Northern Ontario Transportation Plan

The draft Northern Ontario Transportation Plan, 2020 was developed to serve as a guide to help build a modern and sustainable transportation system for people in Northern Ontario. It contains actions that will connect communities, provide safer and more reliable travel and unlock economic potential in the region. Goal 6 of this Plan outlines reliable travel options for remote and Far North communities. This plan is a living document and will be updated with actions to reflect the evolving needs of the region.

The Project is aligned with the objectives of this Plan and will support the goal of achieving sustainable development for Northern Ontario.

6.5.4 Fisheries Management Plan

Fisheries Management Planning as administered by MNRF is designed to highlight and protect the value of the diversity of lakes and rivers and to be flexible and adaptable to a wide range of future conditions. The planning process considers the lake and river system in a holistic manner and includes a range of management options to secure a healthy lake and river environment that conserves the diversity of the fish community and provide opportunities to contribute to the social and economic well-being of the surrounding area. Ontario is divided into Fisheries Management Zones (FMZ). Each specific FMZ outlines restrictions and guidelines for sport and conservation activities as it relates to fishing to verify sustainability of the region's aquatic life. No specific fisheries management plans have been approved for FMZ 1 – 3 (MNRF, 2023h). Métis Nation of Ontario – Region 2 traditional territory lies within FMZ 1, 2, 4, 6 and 7.

6.6 Land Use Plans and Policies

A number of remote fly-in and winter road access First Nation communities, have been (or are currently) undertaking community land use planning, which considers the remote nature of these communities. Where information is available, the following section describes community-based land use planning, on-reserve land use planning and other planning processes. It is noted that most communities do not publicly share their community plans, and currently, information is limited on such communities that have not provided information for the socio-economic baseline for the Project.

Many First Nation communities have developed CBLUPs, which outlines land ownership, land access, and traditional uses on the land.

DRAFT

6.7 Industrial Land Use

Ontario established the Critical Minerals Strategy in 2021, which is a comprehensive five-year plan to secure the province's position as a reliable global supplier of responsibly sourced critical minerals (Ministry of Natural Resources and Forestry, 2022h). Critical minerals are those with industrial, technological or strategic applications for which there are few viable substitutions and are currently at a higher supply risk due to geopolitical considerations and market demand (Ontario Mines Association, 2022). The success of the Critical Minerals Strategy is dependent on six components, referred to as the six pillars in the strategy, which include:

1. Enhancing geoscience information and supporting critical mining exploration;
2. Growing domestic processing and creating resilient local supply chains;
3. Improving Ontario's regulatory framework;
4. Investing in innovation, research and development;
5. Building economic development opportunities with Indigenous partners; and
6. Growing labour supply and developing a skilled labour force.

Mining activity is a large driver of the regional economy (see Section 4). Mining is regulated under the provisions of the provincial *Mining Act*. The purpose of the *Mining Act* is to "encourage prospecting, online mining claim registration and exploration for the development of mineral resources, in a manner consistent with the recognition and affirmation of existing Aboriginal and Treaty Rights in Section 35 of the *Constitution Act, 1982*, including the duty to consult, and to minimize the impact of these activities on public health and safety and the environment" (Ministry of Mines, 2023). Registering a new mining claim and managing an existing mining claim, this is done online through the Mining Lands Administrative System (MLAS).

Under Section 50 of the *Mining Act*, a Mining Claim provides exclusive rights for the claim holder to explore for minerals and rights to enter, use and occupy surface rights as necessary for exploration and development. A mining claim does not provide mining rights for the land to the holder of the claim. Someone that holds a prospector license may stake out a mining claim on land that is open for staking and prospect for minerals on any Crown land, including land traditionally used by Indigenous Peoples and communities (Natural Resources Canada, 2013).

The Government of Ontario is working directly with First Nations through bilateral agreements that support each individual First Nation community's needs and priorities (Ministry of Mines, 2022). Proposed all season road projects in the Ring of Fire area are led by First Nation communities, which include project planning through Environmental Assessments (EA)/ Impact Assessments (IAs), and maximizing benefits and opportunities for First Nations communities.

According to Ontario, building economic development opportunities with Indigenous partners is critical to the success of the strategy as collaboration on resource development projects can help in reconciliation with Indigenous Peoples and communities and provide socio-economic benefits to Indigenous communities. To demonstrate Ontario's commitment to reconciliation and support economic development opportunities to build healthy and prosperous communities across Ontario's north, a resource revenue sharing agreement with Indigenous communities was developed (Ministry of Mines, 2022). This agreement allows Indigenous communities to share in the economic benefits of forestry and mining operations near their communities. This revenue can be used for economic development, education, health, community development, and cultural development. There are currently 35 Indigenous communities involved in the revenue resource sharing agreement with Ontario, including communities represented by Grand Council Treaty #3, Mushkegowuk Council, and Wabun Tribal Council.

To enhance Indigenous community participation, the Aboriginal Participation Fund provides $4.7M annually to support communities' participating in consultation, education and relationship building activities related to mineral exploration and development (Ontario Mining Association, 2022).

Aggregates include sand, gravel and bedrock that are typically used in construction projects. Aggregate resources are regulated under the *Aggregate Resources Act.* Aggregate extraction on Crown land requires an Aggregate Permit and on private land it requires an Aggregate License if it is within an Aggregate Designated Area (Ministry of Natural Resources and Forestry, 2022a).

DRAFT

6.8 Commercial Use, Outdoor Recreation and Tourism

Commercial use, outdoor recreation and tourism are important economic activities for a number of Indigenous communities. Commercial use includes any activity or business that uses the resources from the land to provide income, such as commercial fishing, hunting and trapping. As fishing, hunting, trapping, and gathering wild plants has been a way of living for Indigenous Peoples across Canada for a millennia, many Indigenous communities rely on these traditional activities as their source of income (Kumar et al., 2019). According to the Indigenous Tourism Association of Canada, recreation and outdoor activities (which includes outfitters, hunting, fishing, and wilderness guides, as well as various types of recreational and adventure camps, including recreational vehicle parks and campgrounds) are an important domain in the Indigenous tourism sector (Fiser and Hermus, 2019). In the 2018 census survey completed by the Indigenous Tourism Association of Canada, Ontario generated the second highest revenue in direct Gross Domestic Product (GDP), among all provinces and territories in Canada, from recreation and outdoor activities (Fiser and Hermus, 2019). Tourism is also important because it provides an opportunity for visitors to learn about the history, experience, arts, and culture of Indigenous communities.

Métis Nation of Ontario – Region 2 encompasses a large area of Ontario, including the City of Thunder Bay. Many commercial, recreational and tourism opportunities and activities are available throughout the Métis Nation of Ontario – Region 2.

6.9 Provincial Parks, Areas of Natural and Scientific Interest and Protected Areas

Provincial Parks

There are no federal, provincial, or regional/municipal protected parks and protected areas which overlap with the Project Footprint and Métis Nation of Ontario – Region 2.

In the region, provincial parks include:

The Albany River Provincial Park was established in 1989, starting at Lake St. Joseph at Highway 599 and traversing downriver, approximately 300 km to approximately 30 km west of Marten Falls. The Albany River is a key waterway for travel for Anishinaabemowin/ Anishinaabe/ Mushkegowuk communities.

ANSI

There are no ANSIs or Candidate ANSIs which intersect the Project Footprint or Métis Nation of Ontario – Region 2.

Conservation Reserve

There are no conservation reserves which intersect with the Project Footprint r Métis Nation of Ontario – Region 2.

WSR
WEBEQUIE
SUPPLY ROAD

March 14, 2024

Nicholas Richards
Métis Nation of Ontario - Region 2
226 May Street South Main Floor
Thunder Bay, ON
P7E 1B4

Dear Mr. Richards,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1
- Overview of results of baseline studies to characterize existing conditions within the study area;

- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: The Floating Road**

The livestreaming event is scheduled for **March 18th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

WSR
WEBEQUIE
SUPPLY ROAD

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.

Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Dear Mr. Richards,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1
- Overview of results of baseline studies to characterize existing conditions within the study area;

- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: What are the Protections After the EA?**

The livestreaming event is scheduled for **March 25th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may ask questions on the platforms during the livestream or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions during the radio show at 1-844-424-0500 or the same email above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Dear Mr. Richards,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to the above mailing address containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Community Virtual Information Sessions for Round 3 of Consultation

In the upcoming months, the WSR Project team will be conducting community virtual information sessions for all communities for Consultation Round 3. The Project Team will share information about the EA/IA activities including a project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps.

There will be a presentation on the WSR Project activities. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The WSR Project Team also has a platform to allow for real-time translation to accommodate community members during the session.

The WSR Project Team will be sending a link to your community prior to the information session, so stay tuned and watch out for your community's invitation letter. In the meantime, please visit supplyroad.ca to find information on the WSR Project.

Livestream and Radio Show Series
The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Geology, Terrains, and Soils Preliminary Findings.**

The livestreaming event is scheduled for **April 22nd, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may ask questions on the platforms during the livestream or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions during the radio show at 1-844-722-4300 or the same email above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities
As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the

	EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

3

Sincerely,

Michael Fox

WSR
WEBEQUIE
SUPPLY ROAD

May 29, 2024

Dear Mr. Richards,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps.

We will be offering a community information session, via Zoom, on **Monday, June 10th from 2:00-2:45pm EST** for Métis Nation of Ontario - Region 2, where there will be a presentation on the WSR Project activities for Consultation Round 3. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows:
https://us06web.zoom.us/j/87446380912?pwd=PgJX07SkzaOyPlm0RnVS2m044Jt0PA.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID:** 874 4638 0912 **Passcode:** 732499

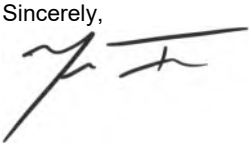
In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/meetings/

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, AtkinsRéalis
Craig Wallace, Project Manager, AtkinsRéalis

July 15, 2024

Dear Mr. Richards,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, scope of EA/IA, EA/IA methodology, preliminary results of effects assessment for select value components, and next steps.

We will be offering a community information session, via Zoom, on **Monday, July 29th from 2:00-2:45pm EST** for Métis Nation of Ontario – Region 2, where there will be a second presentation on the WSR Project activities for Consultation Round 3. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/88366383699?pwd=ed7HaLblpMxuLklGdjmVpHtuPE6u6J.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID:** 883 6638 3699 **Passcode:** 284087

Webequie Supply Road Project
Fall Geotechnical Drilling Program – Field Notice

What's happening?

AtkinsRéalis is proposing to complete drilling programs for the Webequie Supply Road (WSR) project to further engineering design and support the coordinated provincial and federal Environmental Impact Assessment. This letter is intended to provide notice as required by Land Use Permits pending issuance by the Ministry of Natural Resources (MNR). All works will be conducted in accordance with the permit conditions issued by MNR.

A borehole drilling program is planned to occur using a number of different methods of drilling depending on the terrain type and will include a multipurpose helicopter transportable drill, a Talon drill, and/or a ConeTec drill.

Helipad and drill pads will be cleared by a tree cutting team that will precede the drilling teams to ensure safe landing of the helicopters and drill equipment.

There are 50 boreholes proposed, including 37 sites intended for Talon Drilling, 18 ConeTec locations, and 13 sites completed by conventional drilling. The locations proposed for drilling are presented in the attached map.

Schedule

Work is expected to begin in late September 2024 and will continue until approximately mid-November 2024, depending on weather conditions.

What to expect

Field crews will be accessing sites across the study area by helicopter—you may see helicopters in the area carrying personnel and equipment. Crews may need to clear brush and trees from helipad sites to allow helicopter access, which could require the use of chainsaws.

Helicopters may be flying into the Webequie and Ogoki Post airports for refueling and staging purposes.

Re: Early Circulation of Draft Environmental Assessment Report / Impact Statement
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Mr. Richards,

We hope that this finds you and your community well.

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR, or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities. We are using a coordinated approach to ensure all federal and provincial requirements are met and will formally submit/release the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

Today, we are writing to advise you that we are planning an early circulation of the draft EAR/IS to provide the opportunity for your community to review the draft EAR/IS prior to its release to stakeholders and the public for formal review. Early circulation of the draft EAR/IS is a discretionary step in the EA/IA process which the Webequie Project Team is offering to hear your community's views and help us better understand any concerns to address when finalizing the document. At this time, we envision the early circulation of the draft EAR/IS to communities will occur in late fall or early winter of this fiscal year 2024/2025. This will provide communities an extended review period of 60-days to provide their review and comments. Following the circulation of the draft EAR/IS to Indigenous communities, the draft EAR/IS will be circulated formally to the public and stakeholders for 60-day review. This would provide an additional 60 days for Indigenous communities to review the draft EAR/IS, for a total review period of 120 days. Once a final EAR/IS is submitted to the provincial and federal governments for review and a decision, there will be an additional opportunity for Indigenous communities to provide comments during the provincial and the federal 49-day public review period.

We will follow-up with you as we move closer to the circulation of the draft EAR/IS, including how you would like to receive the document (electronic and/or hard copy).

Should you have any questions, please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project Team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

November 1, 2024

Mr. Nick Richard
Métis Nation of Ontario - Region 2
226 May Street South
Thunder Bay, ON P7E 1B4

Re: Round 3 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Mr. Richard:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR or the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report 3 (electronic and hard copy), which summarizes and documents Round 3 of the Engagement and Consultation Program with your community for your review and comments.

The Consultation Progress Report 3 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Reports 1 and 2 for Consultation Rounds 1 and 2 were provided to Indigenous communities and the MECP in October 2022 and January 2024, respectively. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 3 provides an overview of engagement activities in Consultation Round 3, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 3 of the Engagement and Consultation Program occurred from April 2024 to September 2024. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 2;

- Summary of preliminary effects assessment for select valued components, including cumulative effects;
- Incorporation of IKLRU information into EA/IA;
- Proposed mitigation, and follow-up monitoring program; and
- Next steps in EA/IA process.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report 3, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Next steps in the engagement and consultation program for the Project will involve various engagement and consultation options for communities to review assessment findings in the draft Environmental Assessment Report / Impact Statement (EAR/IS), including targeted sessions with Indigenous communities for feedback and input on the results of the cumulative effects assessment for the Project. Future engagement and consultation sessions for communities are tentatively scheduled to start in Winter of fiscal year 2024/2025 and will coincide with the release of the draft EAR/IS for review and comments. The outcomes from future engagement and consultation activities planned will be used by the Project Team to help inform in the development of the Final EAR/IS that will be submitted to provincial and federal regulators and circulated to all Indigenous communities for review and comments.

We welcome any feedback and input your community may have on the attached Consultation Progress Report 3, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report 3, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

Regional Consultation Lead
Webequie Supply Road

November 5, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Assessment on Effects on Geology, Terrain and Soils.**

The livestreaming event is scheduled for **November 12th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

Don Parkinson, Consultation Lead, AtkinsRéalis
Craig Wallace, Project Manager, AtkinsRéalis

November 13, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series
The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Assessment on Effects on Surface Water Resources.**

The livestreaming event is scheduled for **November 18th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or you can email mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Community Virtual Information Sessions for Round 4
The WSR Project Team will be starting virtual information sessions for each community for Consultation Round 4. These are one-on-one sessions where the Project Team shares information about the cumulative effects assessment. The session consists of a presentation on the WSR approach to assessing cumulative effects, followed by a question-and-answer period. The WSR Project team also has a platform to allow for real-time translation to accommodate community members during the session.

You can visit www.supplyroad.ca/sessions/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Engagement Opportunities
As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Nicholas Richard
Métis Nation of Ontario - Region 2
226 May Street South Main Floor
Thunder Bay, ON
P7E 1B4

Dear Mr. Richard,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 3

On November 5, 2024, the WSR Project Team sent a package via Canada Post to the above address containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, December 16, 2024, the package status indicates the package was delivered to the above mailing address on November 6, 2024.

The Consultation Progress Report 3 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Reports 1 and 2 for Consultation Rounds 1 and 2 were provided to Indigenous communities and the MECP in October 2022 and January 2024, respectively. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 3 provides an overview of engagement activities in Consultation Round 3, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 3 of the Engagement and Consultation Program occurred from April 2024 to September 2024. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 2

- Summary of preliminary effects assessment for select valued components, including cumulative effects;
- Incorporation of IKLRU information into EA/IA;
- Proposed mitigation, and follow-up monitoring program; and
- Next steps in EA/IA process.

We welcome any feedback and input your community may have on the Consultation Progress Report 3, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 4. Should your community have any questions or comments on the Consultation Progress Report 3 or would like to request the digital files via file transfer service, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or

	any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date
You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Lead
Webequie Supply Road

Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, AtkinsRéalis Inc (formerly SNC-Lavalin Inc)

January 9, 2025

Dear Mr. Richard,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share information about the cumulative effects assessment (CEA).

We will be offering a community information session, via Zoom, on Monday, January 13th from 2:00-2:45 PM EST for Métis Nation of Ontario - Region 2, where there will be a presentation on the on the topic of the CEA for the Project as part of the engagement activities for Consultation Round 4. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session can be found at the following link: https://us06web.zoom.us/j/87627076989

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-722-4300. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685.

In addition, the Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/meetings/

To help create awareness, facilitate postings, and increase participation for the community information session, the Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. The Project Team is offering opportunities for engagement related to cumulative effects assessment in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the CEA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the CEA with a question-and-answer period at the end of the presentation.

Method	Description
Drop-In Sessions	Community members can drop-in at a safe location to discuss the CEA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the CEA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the CEA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the CEA process with a local translator that the Project team will pay for to explain the CEA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the CEA.

You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

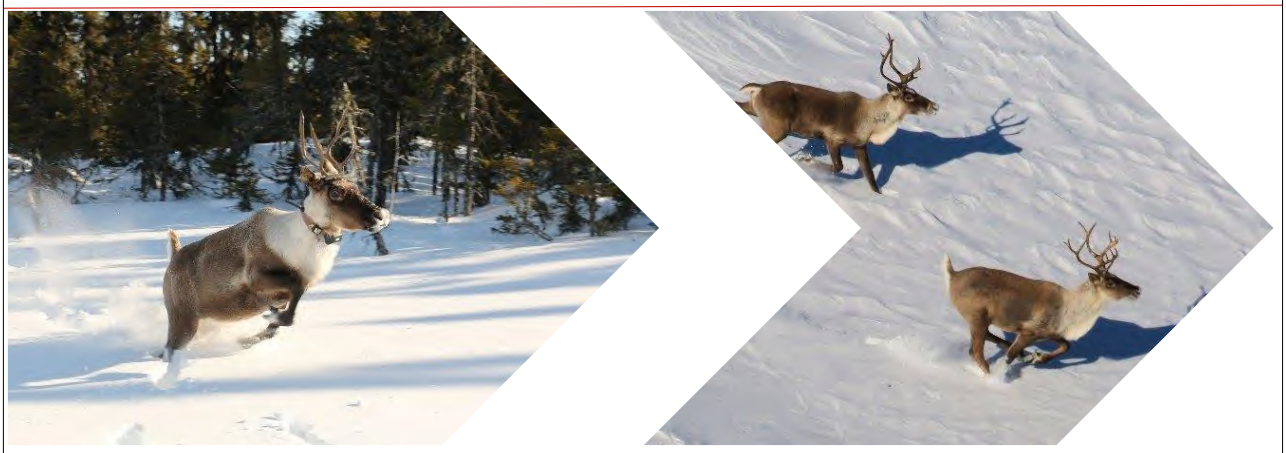
FIELD NOTICE

WEBEQUIE SUPPLY ROAD

JANUARY 2025



WHAT'S HAPPENING?

Field work will be continuing in the 2025 winter season to support the provincial Environmental Assessment (EA) and federal Impact Assessment (IA) for the Webequie Supply Road.

ATIKWAG/CARIBOU COLLAR REMOVAL

Field work has been scheduled to take place from February 19th to March 1st, 2025, to manually remove atikwag/caribou GPS radio tracking collars.

In 2021, radio tracking collars were placed on atikwag/caribou to gather data on their populations, migration patterns, and habitat use. Following three years of data collection, these collars were set to automatically release in February 2024, however not all collars released as intended. A specially trained team will manually remove collars without harming the animal.

WHAT TO EXPECT

Field crews will be accessing sites across the study area by helicopter so you may see helicopters in the area. An update will be provided if the above schedule changes due to weather or other conditions.

WHERE?

See the attached map of the study area. Please note that atikwag/caribou can travel very far and therefore, the field team may need to travel outside of the study area boundaries.

NOTES
DISCLAIMER

February 13, 2025

Dear Mr. Richards,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share information about the cumulative effects assessment (CEA).

We will be offering a community information session for Round 4 Part 2, via Zoom, on Monday, February 24th from 2:00-2:45 PM EST for Métis Nation of Ontario – Region 2, where there will be a presentation on the on the topic of the CEA for the Project as part of the engagement activities for Consultation Round 4. We anticipate the community information session to be approximately 45 minutes in length with a presentation and question and answer period. The Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/82403224851?pwd=HaxPRAMX6GitRkejQaJH65iDjVNZC0.1

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-722-4300. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685.

In addition, the Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/meetings/

To help create awareness, facilitate postings, and increase participation for the community information session, the Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. The Project Team is offering opportunities for engagement related to cumulative effects assessment in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the CEA. The session will be facilitated by the Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
In-Community Sessions	Community information sessions can be conducted, whereby the Project Team will discuss the CEA with a question-and-answer period at the end of the presentation.

Method	Description
Drop-In Sessions	Community members can drop-in at a safe location to discuss the CEA with the Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the Project Team will discuss the CEA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the Project Team will fax you the CEA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the Project Team can present the CEA process with a local translator that the Project team will pay for to explain the CEA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the CEA.

You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Re: Early Circulation of Draft Environmental Assessment Report/Impact Statement for Review
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Mr. Richard,

We hope that this finds you and your community well.

As you may know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR), or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (refer to attached project location key plan).

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* are being conducted for the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and have prepared the results of the assessments in one single report called the Environmental Assessment Report / Impact Statement (EAR/IS).

Today, we are writing to advise you that an early circulation of the Draft EAR/IS is now available to your community for review. The Draft EAR/IS documents the evaluation of alternative routes considered for the WSR and presents the Preferred Route and location for supportive project infrastructure (e.g., construction camps, pits/quarries). It also documents the potential environmental, social, cultural and health impacts including cumulative effects, proposed mitigation measures, and engagement and consultation undertaken so far.

The draft EAR/IS is being circulated in two stages:

- Early Access for Indigenous Communities: 120-Day Review Period, June 9 to October 7, 2025
- Public and Stakeholders: 60-Day Review Period, August 8 to October 7, 2025

The two-stage approach to circulation of the Draft EAR/IS will provide your community with an extended review period to provide comments on the document, for a total of 120 days.

Enclosed is the Draft EAR/IS for the WSR Project for review. This package includes:

- One (1) hard copy of the main body of the Draft EAR/IS;

- Electronic copy (USB - digital memory stick) of EAR/IS Appendices that include draft technical reports; and
- One hard copy and electronic copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree and Cree.

The Draft EAR/IS and information on the review process is also available on the WSR Project Website: https://www.supplyroad.ca.

What is not included in Draft EAR/IS at this time is the draft Record of Consultation and Engagement with Indigenous communities, the public and stakeholders. This document will be provided to your community when the draft EAR/IS is released for public and stakeholder review (August 8, 2025). In the interim, consultation and engagement activities and feedback we received from your specific community are documented in the Consultation Progress Reports for Rounds 1, 2 and 3 previously sent to you at key milestones in the EA/IA process, and can also be found on the Project website https://www.supplyroad.ca under "**Documents**".

Members of your community are encouraged to actively participate in the review of the Draft EAR/IS. Comments and feedback can be provided via the Project Website (https://www.supplyroad.ca); Project email (wsrcomments@supplyroad.ca) or by letter mail until October 7, 2025 to the contacts below:

APPENDIX P2.I.19

Correspondence with Indigenous Communities and Groups – Mushkegowuk Council

Webequie Supply Road Project Consultation Log

Records Found: 1

Mushkegowuk Council — Aboriginal Businesses

Contact Date: Oct 29, 2021 16:30 Method: E-mail
Topics to be Discussed: Notice of Commencement of Environmental Assessment
Don Parkinson of SNC Lavalin Inc (SNC) emailed the Notice of Commencement of Environmental Assessment (EA) for the Webequie Supply Road (WSR) Project to all stakeholders including the public, Indigenous communities, agencies and other interested parties. The email informed the stakeholders that the Terms of Reference (ToR) with amendments for the WSR EA Study was approved by the Minister of the Environment, Conservation and Parks (MECP) on October 8th, 2021. The email also informed them that the approved ToR and Notice of Approval can be accessed on the project website. It further encouraged participation in future consultations.
Attached File: SNC-Public Notice of Commencement of EA-2021-10-21.pdf

Contact Date: Aug 18, 2022 15:33 Method: E-mail
Topics to be Discussed: Notice of Public Information Centre
Brianna Patrick and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email blast to all Indigenous communities and organizations with a Notice of Public Information Centre being held on August 25, 2022 at 2:00pm to 5:00pm and at 6:00pm to 9:00pm at the Valhalla Hotel inn, Thunder Bay to provide interested parties an opportunity to learn about the ongoing Environmental Assessment/Impact Assessment (EA/IA) study for the WSR Project and provide feedback. The Notice provided information on the Project purpose, details of the EA/IA, and the contact information of Project Leads. The Notice also included a map of the Project area and two alternative road locations.

Contact Date: Aug 23, 2022 12:57 Method: E-mail
Topics to be Discussed: Notice of Public Information Centre
Brianna Patrick and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email blast to all Indigenous communities and organizations as a reminder about the Public Information Centre being held on August 25, 2022 at 2:00pm to 5:00pm and at 6:00pm to 9:00pm at the Valhalla Hotel inn, Thunder Bay to provide interested parties an opportunity to learn about the ongoing Environmental Assessment/Impact Assessment (EA/IA) study for the WSR Project and provide feedback. The email included a Notice of Public Information Centre which provided information on the Project purpose, details of the EA/IA, and the contact information of Project Leads. The Notice also included a map of the Project area and two alternative road locations.

Contact Date: Sep 22, 2023 18:41 Method: E-mail
Topics to be Discussed: Notice of Public Information Centre #2 for EA
Don Parkinson, Consultation Lead of AtkinsRéalis, emailed the Notice of Public Information Centre #2 (PIC #2) for the Environmental Assessment Phase of the Webequie Supply Road Project to public and private stakeholders, land tenure and claim holders, federal and provincial agencies, and other interested parties. Don reminded that a Public Information Centre (PIC) is being held to provide interested parties an opportunity to learn and provide feedback on the Environmental Assessment / Impact Assessment (EA/IA) for the Webequie Supply Road. The email also informed that the PIC #2 will consist of a presentation at 2:00pm and 6:00pm followed by an informal drop-in session with display information about the project. The PIC has been scheduled to be on Monday, October 2, 2023 and Tuesday, October 3, 2023 from 2:00pm to 4:00pm and 6:00pm to 8:00pm at the Victoria Inn Hotel & Convention Centre in Thunder Bay, Ontario and Thursday, October 12, 2023 from 6:00pm to 8:00pm at the Cedar Meadows Resort & Spa in Timmins, Ontario. The Notice provided information on the Project purpose, details of the EA/IA, and the contact information of the Project Leads. The Notice also included a map of the Project area and two alternative road locations.

Contact Date: May 27, 2024 10:53 Method: E-mail
Topics to be Discussed: Draft EA/IA Report Planning
Haley Rice Columbus of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Vern Cheechoo of Mushkegowuk Council indicating that Michael Fox would like to provide an update on the initial planning stages for the draft Environmental Assessment / Impact Statement (EAR/IS) related to the WSR Project. The email explained that given, Vern Cheechoo's involvement in the area, the team would like to hear thoughts on how Mushkegowuk Council would like to participate in the review process. Haley requested Vern's availability to discuss further.

Contact Date: Jun 11, 2024 09:00 Method: Open House
Topics to be Discussed: Three Roads Project Gathering and Expo
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team was one of three hosts for the Three Roads Projects Gathering & Expo (Gathering) held at the Superior Inn and Conference Centre in Thunder Bay on June 11-13, 2024.

The purpose of the Gathering was to create a respectful, and collaborative space for consultation to continue to build an understanding of the three road projects and their potential impacts by: 1) Providing a comfortable space for Elders to gather and discuss the Projects; 2) Creating opportunities to engage directly with the Project proponents and consulting teams sharing information about the Projects and; 3) Discussing the upcoming draft Environmental Assessment Report / Impact Statement (EAR/IS) Review Process for WSR and the Marten Falls Community Access Road (MFCAR) Project.

Day 1 was set aside exclusively as an Elders Gathering to gather and engage with the individual Project Teams for all three projects to share their perspectives. By design, there were no government representatives in attendance on Day 1; only Indigenous people and Indigenous consultants, to encourage a more open and comfortable discussion. This was a new and innovative approach to engaging with Indigenous communities by the creation of a sacred space that was authentic, comfortable and open.

Day 2 was open to all participants. The morning focused on a series of technical presentations on key issues identified in previous engagement and consultation opportunities (peatlands (and other terrain), building roads on peatlands, aspects of water and fish populations). The afternoon was an Expo where participants could visit a series of booths to have one-on-one conversations with Project Team members from each of the road projects, various technical aspects of the Projects, Ontario and the Impact Assessment Agency of Canada.

Day 3 was also open to all participants. This session was a half day workshop on a common approach to reviewing the upcoming circulation of draft EAR/ISs for two of the three road projects so that there would be sufficient time to review and provide feedback. Each project team wanted to share the common approach to reviewing the draft EAR/ISs with Indigenous Nations early so that there was a shared understanding of what to expect and when. This would allow Indigenous communities to prepare themselves in advance with respect to resources to assist in the review.

Eligible Indigenous communities were invited to attend with 3 participants from each community being funded by the province. A total of 44 individuals signed in for Day one of the gathering, A total of 62 individuals signed in for Day 2, and a total of 48 individuals signed in for Day 3, but please note that not all participants opted to sign in. In total 1 participant from Mushkegowuk Council attended the Gathering over the 3 days; James Tegler.

Contact Date: Aug 29, 2024 15:26 Method: E-mail
Topics to be Discussed: Notice of Public Information Center #3
Don Parkinson, Consultation Lead of AtkinsRéalis, emailed the Notice of Public Information Centre #3 (PIC #3) for the Environmental Assessment Phase of the Webequie Supply Road Project to public and private stakeholders, land tenure and claim holders, federal and provincial agencies, and other interested parties. Don reminded that a Public Information Centre (PIC) is being held to provide interested parties an opportunity to learn and provide feedback on the Environmental Assessment / Impact Assessment (EA/IA) for the Webequie Supply Road. The email also informed that the PIC #3 will consist of a presentation followed by an informal drop-in session with display information about the project. The PIC #3 has been scheduled to be on Tuesday, September 10, 2024 from 2:00pm to 4:00pm and 6:00pm to 8:00pm at the Best Wetsern Premier Northwood Hotel in Timmins, Ontario, and Thursday, September 12, 2024 from 2:00pm to 4:00pm and 6:00pm to 8:00pm at the Superior Inn Hotel in Thunder Bay, Ontario. The Notice provided information on the Project purpose, details of the EA/IA, and the contact information of the Project Leads.

Contact Date: May 27, 2025 08:03 Method: E-mail
Topics to be Discussed: Draft EAR/IS
James Tegler of Mushkegowuk Council sent an email to Don Parkinson of AtkinsRéalis and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team. The email indicated that James read about a gathering to celebrate the WSR Draft Environmental Assessment Report / Impact Assessment release date for the WSR, but he hasn't seen any information about what date it is going to be released. James asked if the release date has been shared already.

15:07
Don Parkinson responded to James' email indicating the Project team will be releasing the WSR Draft EAR/IS on June 9, 2025 to the 22 rights-based and interest-based communities that the team has been consulting during the EA/IS process. Don indicated that this date will be an exclusive, no provincially or federally mandated 60-day review period, after which the document will be made available to stakeholders and the general public for another 60-day review period. Don thanked James for the email and indicated that James could reach out to him with any questions.

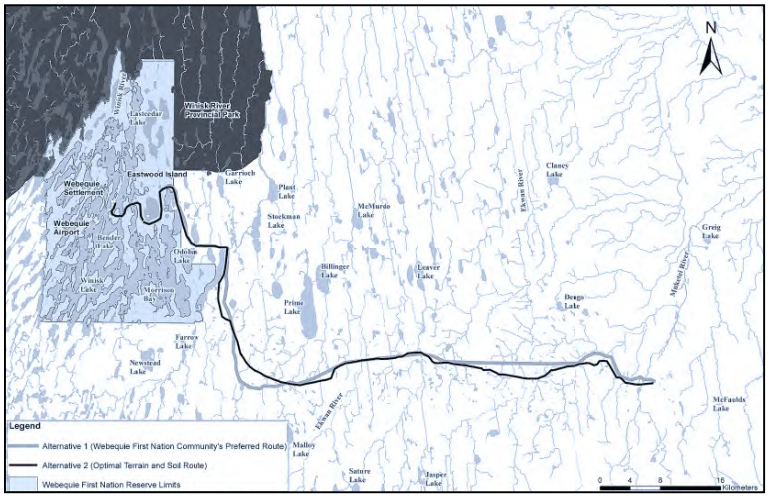
NOTICE OF COMMENCEMENT OF ENVIRONMENTAL ASSESSMENT

Webequie Supply Road Project
Webequie First Nation

Webequie First Nation (WFN) is beginning an Environmental Assessment (EA) for the Webequie Supply Road Project ("the Project") under the *Environmental Assessment Act.*

The proposed Webequie Supply Road will be an all-season road corridor approximately 107 km in length from Webequie First Nation to the mineral deposit area near McFaulds Lake. The preliminary corridor for the road consists of a northwest-southeast segment running 51 km from Webequie First Nation to a 56 km segment running east, before terminating near McFaulds Lake. A total of 17 km of the corridor is located within Webequie First Nation Reserve lands. The preliminary supply road route alternatives that are to be examined and evaluated in the EA are shown in the accompanying Key Plan.



PROJECT PURPOSE

The purpose of the Project is to create an all-season corridor that will facilitate the movement of materials, supplies and people from the Webequie Airport to the proposed mine development and mineral exploration activities in the McFaulds Lake area of Northwestern Ontario. The Project is intended to provide the WFN with a means to better service their community and be a contributor to the local economy by providing employment and economic development opportunities.

THE PLANNING PROCESS

On October 8th, 2021 the Minister of the Environment, Conservation and Parks (MECP) approved the Terms of Reference (ToR) with amendments for the Webequie Supply Road EA Study. A copy of the approved ToR and MECP Notice of Approval can be accessed on the project website at www.supplyroad.ca.

The Webequie Supple Road EA Study will be carried out according to the approved ToR, the amendments contained in the Notice of Approval, and the requirements of the *Environmental Assessment Act.* In addition, an impact assessment is required for the Project under the federal *Impact Assessment Act.* For the Webequie Supply Road Project, the two levels of government have indicated a willingness to follow a coordinated assessment process, and for the proponent to produce one body of documentation with the results of the study in an Environmental Assessment Report/Impact Statement (EAR/IS). A draft EAR/IS will be made available for review and comment. The EAR/IS will then be updated as required and submitted to the MECP and Impact Assessment Agency of Canada for review. At that time, the public, Indigenous communities and other interested persons will be informed when and where the EAR/IS can be reviewed.

CONSULTATION

Members of the public, Indigenous communities, agencies, and other interested parties are encouraged to actively participate in the planning of the Project by attending consultation opportunities or contacting Webequie Project Team staff directly with information, comments or questions. Consultation opportunities are planned throughout the planning process and the purpose, timing and nature of these activities will be advertised on the project website, local newspapers and direct email/mail out.

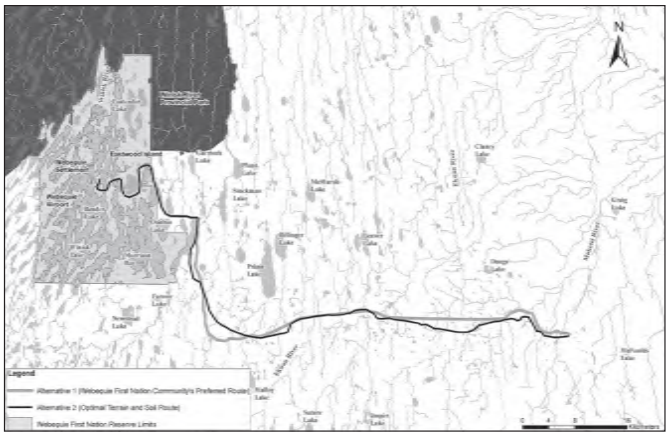
NOTICE OF PUBLIC INFORMATION CENTRE #1

Webequie Supply Road Project
Environmental Assessment / Impact Assessment



Webequie First Nation (WFN) is undertaking a provincial Environmental Assessment (EA) and federal Impact Assessment (EA/IA) for the Webequie Supply Road Project ("the Project").

The proposed Webequie Supply Road will be an all-season road corridor approximately 107 km in length from Webequie First Nation to the mineral deposit area near McFaulds Lake. The preliminary corridor for the road consists of a northwest-southeast segment running 51 km from Webequie First Nation to a 56 km segment running east, before terminating near McFaulds Lake. A total of 17 km of the corridor is located within Webequie First Nation Reserve lands. The preliminary supply road route alternatives that are to be examined and evaluated in the EA/IA are shown in the accompanying Key Plan.

PROJECT PURPOSE

The purpose of the Project is to create an all-season corridor that will facilitate the movement of materials, supplies and people from the Webequie Airport to the proposed mine development and mineral exploration activities in the McFaulds Lake area of northwestern Ontario. The Project is intended to provide WFN with a means to better service their community and be a contributor to the local economy by providing employment and economic development opportunities.

THE PLANNING PROCESS

On October 8, 2021, the Minister of the Environment, Conservation and Parks approved the Terms of Reference (ToR) with amendments for the Webequie Supply Road EA Study. The Webequie Supply Road EA Study is being carried out according to the approved ToR and the requirements of the *Environmental Assessment Act*. In addition, on February 24, 2020, the Impact Assessment Agency of Canada published a Notice of Commencement of the Impact Assessment (IA) and provided WFN with Tailored Impact Statement Guidelines for meeting the requirements under federal *Impact Assessment Act*. The Project is now in the Impact Statement (IS) phase. For the Project, the two levels of government have indicated a willingness to follow a coordinated assessment process, and for the proponent to produce one body of documentation with the results of the study in an Environmental Assessment Report/Impact Statement (EAR/IS). A draft EA/IS will be made available for review and comment, and at that time, the public, Indigenous communities and other interested persons will be informed when and where the EAR/IS can be reviewed.

PUBLIC INFORMATION CENTRE #1

Public Information Centre (PIC) #1 is being held to provide interested parties an opportunity to learn about the ongoing EA/IA study for the Project and provide feedback. The PIC will consist of a presentation at 2:00 p.m. and at 6:00 p.m. followed by an informal drop-in centre with display information about the Project. Project Team representatives will share information on the EA/IA process, studies being conducted, approach for evaluation of alternatives, Indigenous Knowledge program, feedback we have heard to-date, and future consultation and engagement opportunities. You are invited to attend the PIC, which has been scheduled as follows:

Thursday August 25, 2022
2:00 p.m. to 5:00 p.m. and 6:00 p.m. to 9:00 p.m.
Valhalla Hotel and Conference Centre
Viking Room
1 Valhalla Inn Rd, Thunder Bay

The Public Information Centre (PIC) venue is wheelchair accessible. The PIC livestream will be available on the project website: www.supplyroad.ca. You can also find information on the study progress and updates on the website.

NOTICE OF PUBLIC INFORMATION CENTRE #2
Webequie Supply Road Project Environmental Assessment / Impact Assessment

Webequie First Nation (WFN) is undertaking a provincial Environmental Assessment (EA) and federal Impact Assessment (EA/IA) for the Webequie Supply Road Project ("the Project").

The proposed Webequie Supply Road is an all-season road of approximately 107 km in length from Webequie First Nation to the mineral deposit area near McFaulds Lake. The preliminary corridor for the road consists of a northwest-southeast segment running 51 km from Webequie First Nation to a 56 km segment running east, before terminating near McFaulds Lake. A total of 17 km of the corridor is located within Webequie First Nation Reserve lands. The alternative routes for the supply road within the preliminary corridor that will be examined and evaluated in the EA/IA are shown in the accompanying Key Plan.

PROJECT PURPOSE

The purpose of the Project is to create an all-season corridor that will facilitate the movement of materials, supplies and people from the Webequie Airport to the proposed mine development and mineral exploration activities in the McFaulds Lake area of Northwestern Ontario. The Project is a means for WFN to better service their community and contribute to the local economy by providing employment and economic development opportunities.

THE PLANNING PROCESS

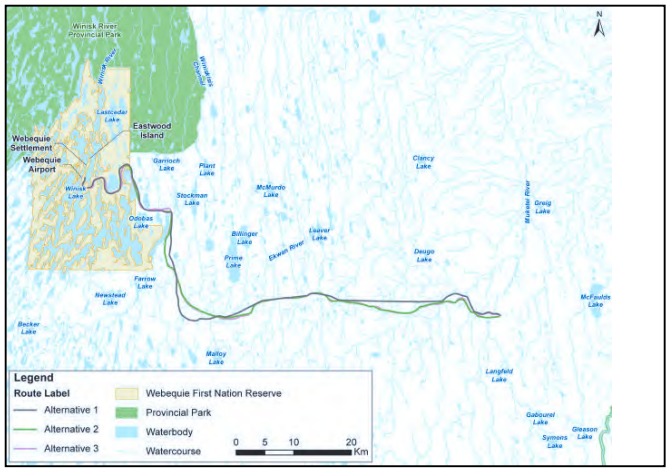
On October 8, 2021, the Minister of the Environment, Conservation and Parks approved the Terms of Reference (ToR) with amendments for the Webequie Supply Road EA Study. The Webequie Supply Road EA Study is being carried out according to the approved ToR and the requirements of the Environmental Assessment Act. In addition, on February 24, 2020, the Impact Assessment Agency Canada published a Notice of Commencement of the Impact Assessment (IA) and provided WFN with Tailored Impact Statement Guidelines for meeting the requirements under federal Impact Assessment Act. The Project is now in the Impact Statement (IS) phase. For the Project, the two levels of government have indicated a willingness to follow a coordinated assessment process, and for the proponent to produce one body of documentation with the results of the study in an Environmental Assessment Report/ Impact Statement (EAR/IS). A draft EA/IS will be made available for review and comment, and at that time, the public, Indigenous communities, and other interested persons will be informed when and where the EAR/IS can be reviewed.

PUBLIC INFORMATION CENTRE #2

Public Information Centres (PIC) are being held to provide interested parties an opportunity to learn about the ongoing assessment of alternatives that is being conducted as part of the EA/IA study and provide feedback. The PIC will consist of a presentation at 2 p.m. followed by an informal drop-in centre with display information about the project. Project Team representatives will share information on EA/IA process, studies being conducted, criteria for evaluation of route alternatives and alternative locations for supportive infrastructure (e.g., aggregate source areas, construction camps) including results from the assessment, feedback we have heard to-date, and future consultation and engagement opportunities. You are invited to attend the PIC, which have been scheduled as follows:

October 3 & October 4, 2023
2 p.m. to 4 p.m. & 6 p.m. to 8 p.m.
Victoria Inn Hotel and Convention Centre, 555 Arthur St W, Thunder Bay

October 12, 2023
6 p.m. to 8 p.m
Cedar Meadows Resort & Spa, 1000 Norman St, Timmins



Key Plan – Location of Webequie Supply Road Route Alternatives

If you cannot attend the in-person sessions, you can also find the information on the study progress and updates on our website: https://www.supplyroad.ca/. The Public Information Centre venues are wheelchair accessible and there will be a kid's corner with colouring books at the venues. The PIC livestream will be available on the project website: www.supplyroad.ca.

THE PLANNING PROCESS

On October 8, 2021, the Minister of the Environment, Conservation and Parks approved the Terms of Reference (ToR) with amendments for the Webequie Supply Road EA Study. The Webequie Supply Road EA Study is being carried out according to the approved ToR and the requirements of the *Environmental Assessment Act*. In addition, on February 24, 2020, the Impact Assessment Agency Canada published a Notice of Commencement of the Impact Assessment (IA) and provided WFN with Tailored Impact Statement Guidelines for meeting the requirements under federal *Impact Assessment Act*. The Project is now in the Impact Statement (IS) phase. For the Project, the two levels of government have indicated a willingness to follow a coordinated assessment process, and for the proponent to produce one body of documentation with the results of the study in an Environmental Assessment Report/Impact Statement (EAR/IS). A draft EA/IS will be made available for review and comment, and at that time, the public, Indigenous communities, and other interested persons will be informed when and where the EAR/IS can be reviewed.

PUBLIC INFORMATION CENTRE #3

Public Information Centres (PIC) are being held to provide interested parties an opportunity to learn about the ongoing EA/IA study, planned next steps and to provide feedback. The PIC will consist of a presentation followed by an informal open house format with display information about the Project. Project Team representatives will share information on EA/IA activities, results of consultation and engagement activities to date, preliminary effects assessment results for the Project, and future consultation and engagement opportunities. You are invited to attend the PIC, which have been scheduled as follows:

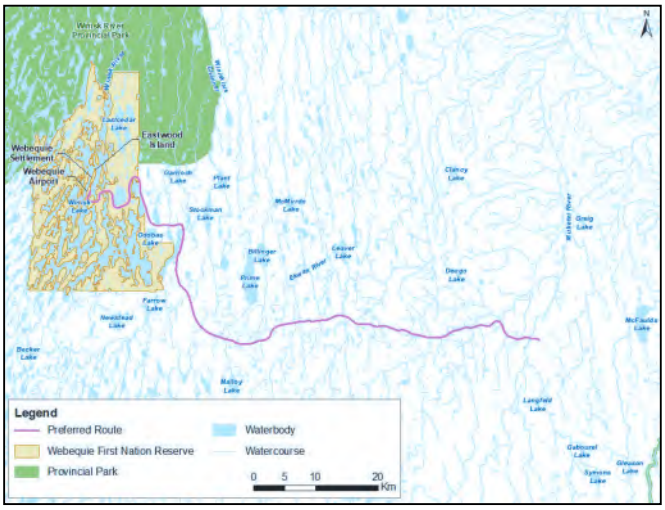
Timmins Open House

Tuesday, September 10, 2024
2 p.m. to 4 p.m. and 6 p.m. to 8 p.m.
Best Western Premier Northwood Hotel, Meeting Room 1,
Main Floor, 245-A Airport Road, Timmins

Thunder Bay Open House

Thursday, September 12, 2024 (Public and Stakeholders)
2 p.m. to 4 p.m. and 6 p.m. to 8 p.m.

Friday, September 13, 2024 (Indigenous Off-Reserve Community Members)
10 a.m. to 12 p.m. and 1 p.m. to 3 p.m.
The Superior Inn Hotel & Conference Centre, Regency C, 555 West Arthur Street, Thunder Bay



Key Plan – Location of Webequie Supply Road Preferred Route

The Public Information Centre venues are wheelchair accessible. The PIC livestream will be available on the project website: www.supplyroad.ca. If you cannot attend the in-person sessions, you can also find the information on the study progress and updates on our website.

CONTACTS

If you are unable to attend the PIC, or have any comments or questions regarding the study, you are welcome to contact the following:

Michael Fox
Regional Consultation Lead
Webequie First Nation

APPENDIX P2.I.20

Correspondence with Indigenous Communities and Groups – Neskantaga First Nation

Webequie Supply Road Project Consultation Log

Records Found: 1

Neskantaga First Nation — First Nation Community

Contact Date: Oct 29, 2021 16:30 Method: E-mail
Topics to be Discussed: Notice of Commencement of Environmental Assessment
Don Parkinson of SNC Lavalin Inc (SNC) emailed the Notice of Commencement of Environmental Assessment (EA) for the Webequie Supply Road (WSR) Project to all stakeholders including the public, Indigenous communities, agencies and other interested parties. The email informed the stakeholders that the Terms of Reference (ToR) with amendments for the WSR EA Study was approved by the Minister of the Environment, Conservation and Parks (MECP) on October 8th, 2021. The email also informed them that the approved ToR and Notice of Approval can be accessed on the project website. It further encouraged participation in future consultations.
Attached File: SNC-Public Notice of Commencement of EA-2021-10-21.pdf

Contact Date: Nov 03, 2021 14:00 Method: Mail
Topics to be Discussed: Community Newsletter, Terms of Reference, Environmental Assessment Process
Melanie Laforest and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team mailed a letter and 50 copies of a newsletter to Neskantaga First Nation's (NFN) Chief Wayne Moonias, advising that the WSR Project's Terms of Reference (ToR) had been approved with amendments by the Minister of the Environment, Conservation and Parks, and that the Environmental Assessment (EA) process would begin. The letter indicated that multiple copies of the newsletter were enclosed for distribution to the community. The newsletter provided information about the steps involved in the EA process, including the Notice of Commencement, Baseline Studies and Identification of Alternatives, Engagement and Consultation, and the Indigenous Knowledge Program. Michael provided a link to the WSR Project website along with himself and Don Parkinson of SNC-Lavalin's email address if NFN has any questions or comments.

Topics to be Discussed: Indigenous Knowledge / Indigenous Land and Resource Use Program
Brianna Patrick and Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an e-mail to Neskantaga First Nation's (NFN) Chief Wayne Moonias, with an attached package that included a letter, map, and Information Sharing Agreement. The letter advised that the WSR Project Team are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program and inquired whether NFN would be interested in participating in the Program. The letter included information about the IKLRU Program purpose, phases and guiding principles. The letter noted the importance of the protection and confidentiality of information collected and used in the IKLRU Program and indicated that a draft Information Sharing Agreement was included in the package, which outlined how confidential and sensitive information would be utilized in the WSR Project's environmental assessment and design process. A map of the Preliminary Study Areas for Indigenous Peoples Land Use and Interests was also included in the package. The letter asked NFN to confirm their interest in participating in the Program by January 27, 2022. Brianna and Michael provided their email and cell phone contact information if NFN has any questions.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Marian Tibor-McMahon and Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a fax, to Neskantaga First Nation's (NFN) Chief Wayne Moonias, which included a letter and map of the WSR Socio-Economic Study Areas. The letter stated that a key component of the EA/IA process is collecting socio-economic information within the Project study area, and as a result, the WSR Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered. It included information about what information the socio-economic program will gather, what the study area is, and detailed the components of the program. The letter invited NFN to participate in the WSR socio-economic primary data collection program. The letter asked NFN to confirm their interest in participating in the program by February 3, 2022. Marian provided her email and cell phone contact information if NFN has any questions.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Marian Tibor-McMahon of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an e-mail to David Peerla, advisor to Neskantaga First Nation (NFN) in response to the e-mail David sent on December 22, 2021 to Marian regarding the Socio-Economic Primary Data Collection Program. Marian addressed the concerns David had regarding the current state of the COVID-19 pandemic with the Omicron variant, stating that as a result of the risks involved with in-person engagement, the Project Team had developed various virtual engagement options. Marian attached a list of these virtual engagement options. Marian responded to David's request that the Project Team provides him with a copy of the socio-economic information that has been gathered thus far from secondary sources on NFN by providing a link to the secondary sources. Marian indicated that once the draft baseline report is complete, the Project Team can provide NFN with an opportunity to review and validate the information in the report pertaining to NFN. It was stated that the Project Team would be happy to set up a call with NFN to discuss the information provided and ways in which NFN may be able to be engaged with during this study process.

Topics to be Discussed: Indigenous Knowledge / Indigenous Land and Resource Use Program
David Peerla, advisor to Neskantaga First Nation (NFN) emailed Brianna Patrick of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team in response to the e-mail Brianna sent on December 13, 2021 to Chief Wayne Moonias regarding the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program. David stated that Chief and Council are entirely focused on the health and safety of their community given the current state of the COVID-19 pandemic and the Omicron variant. David raised concerns for NFN not being able to meaningfully engage with and participate in the IKLRU program as a result, and stated that the proponent should suspend or pause Environmental Assessment (EA) programs until the Omicron wave of the COVID-19 pandemic has passed. David indicated that NFN would be in touch regarding the IKLRU program after the Omicron wave has passed.

Topics to be Discussed: Indigenous Knowledge / Indigenous Land and Resource Use Program
David Peerla, advisor to Neskantaga First Nation (NFN) emailed Brianna Patrick of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team in response to the e-mail Brianna sent on February 4, 2022 regarding the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program. David stated that during their research, NFN came across an article on Webequie fisheries that may be helpful for the IKLRU Program. David also stated that NFN members have family that are connected to fishing on specific lakes mentioned in the article. The article provided information on the importance of subsistence fishing as a source of food for Webequie, the various field surveys that had been conducted, community harvest estimates, and details on various fish species.

Topics to be Discussed: WSR Impact Assessment and Statements
David Peerla, advisor to Neskantaga First Nation (NFN) emailed Michael Fox of Indigenous Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team in response to the email Michael sent to NFN on April 1, 2022 regarding the upcoming WSR Livestream and Radio Show and Engagement Options. David stated that NFN is aware the WSR Project Team indicated to the Impact Assessment Agency of Canada that the team would likely require an extension of the Impact Statement Phase. David inquired what this means for the provincial Environmental Assessment work, how long of an extension the team is requesting, and the rationale for requesting an extension.

Contact Date: May 13, 2022 13:29 Method: E-mail
Topics to be Discussed: Virtual Information Session
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to David Peerla, advisor of Neskantaga First Nation (NFN) and NFN's Chief Wayne Moonias, in response to the email David sent on May 11, 2022 stating that NFN's partners from the Osgoode Hall Law School would be attending the virtual information session on behalf of their leadership. Michael stated that while he appreciates NFN's decision to not directly participate in the WSR's virtual information session, he wanted to convey the intention of the First Nation-specific information sessions as per the approved WSR Terms of Reference (ToR). Michael highlighted sections in the ToR regarding meaningful input from Indigenous communities during the development of the Environmental Assessment (EA) and the preparation of progress reports on the consultation activities for each EA milestone. Michael explained that there will be three rounds of consultation efforts during the EA process and the Project is currently in round one. As such, the information sessions are specific to each Indigenous community with the intention of gathering community input, insights, and information to inform the Project. Michael encouraged NFN to participate in their session in order to fully benefit from the opportunity to be informed and provide direct feedback. Michael asked whether the external partners of NFN will be representing the interest of NFN during the discussions after the presentation. Michael also asked if NFN's legal advisor or lawyer would be in attendance.

Topics to be Discussed: Virtual Information Session
David Peerla, advisor of Neskantaga First Nation (NFN) sent an email to Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team, in response to Michael's email on May 13, 2022 regarding NFN's decision not to directly participate in the virtual information session. David stated that the Osgoode Hall Law School representatives may be able to provide clarification on NFN's previously expressed positions, but will report any WSR questions back to the NFN leadership. David explained the role of the representatives is to gather information and keep the leadership informed on the WSR Environmental Assessment. David stated that NFN's lawyers would not be attending the session.

Topics to be Discussed: Virtual Information Session
Michael Fox of Indigenous and Community Engagement and Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session for Neskantaga First Nation (NFN) on May 16, 2022. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, Don played a video presentation which included information on WSR's Environmental Assessment / Impact Assessment (EA / IA) activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. After the video presentation, Michael and Don discussed several questions that had been previously asked by NFN. These questions were regarding ownership, capital costs, impacts on eskers and traplines, and NFN's shared territory. Lastly, the community representatives in attendance asked several questions regarding how the Project Team will measure anticipated road traffic, cumulative effects related to climate change and greenhouse gases, and habitat availability, when and how NFN's questions will be responded to, the role of Indigenous Knowledge in the assessment process, local employment opportunities, remediating aggregate quarries post construction, and potential wildfire risks and impacts. These questions were answered by Michael, Don, and Ange Brooks of SNC. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community representatives. There were three community members in attendance. The Project Team informed the audience that a recording of the session is made available through YouTube and the WSR Website for viewing.

Topics to be Discussed: WSR Impact Assessment and Statements
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to David Peerla, advisor of Neskantaga First Nation (NFN) in response to the email David sent on April 1, 2022 with questions regarding the WSR Impact Assessment (IA) Phase. Michael stated that the proponent has three years to prepare and submit a satisfactory Impact Statement to the Impact Assessment Agency of Canada (IAAC) from the date of issuance of the Notice of Commencement of the IA (February 24, 2020). Michael stated that the WSR Team and IAAC are in preliminary discussions regarding an extension to the Impact Statement Phase, but no date has been set yet. However, the proponent intends to submit a formal extension request on September 24, 2022. Michael noted the rationale for an extension is due to the delay in receiving approval of the Environmental Assessment (EA) Terms of Reference and the COVID-19 global pandemic. Michael also stated this means that the proponent will align the provincial EA process with the federal Impact Statement Phase, where possible, including adjusting its project schedule and consultation program. Michael indicated that NFN and other Indigenous communities would be kept informed on any changes to the project schedule.

Topics to be Discussed: WSR Newsletter - Socio-Economics, Indigenous Knowledge, Virtual Information Sessions
Michael Fox and Brianna Patrick of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Neskantaga First Nation's (NFN) Chief Wayne Moonias which included 50 copies of the English WSR Newsletter – Issue 14. The newsletter provided information about the topics for Consultation Round 2 and highlighted the importance of the Indigenous Knowledge / Land Resource Use Program and Socio-Economic Programs in the WSR Environmental Assessment / Impact Assessment. It also included information on how to access past virtual community information sessions. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael, Don Parkinson of SNC-Lavalin, and Leslie Spence the WSR Local Coordinator provided their e-mail address and phone number if NFN has any questions or comments.

Topics to be Discussed: ATRI Forum
Jo Sakanee of Neskantaga First Nation (NFN) sent an email to Michael Fox of Indigneous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team with an attached letter addressed from Chief Wayne Moonias of NFN to Chief Bruce Achneepineskum of Marten Falls First Nation, Chief Cornelius Wabasse of Webequie First Nation, the Marten Falls Community Access Road Project Team and the WSR Project Team. The letter was written as a response to the Aboriginal Treaty Rights and Interests (ATRI) Forum Invitation indicating that NFN will not be participating in the ATRI Forum. NFN indicated that they are engaged in an ongoing litigation with Ontario and the road proponent First Nations in relation to the flawed consultation process undertaken for the environmental assessment/impact assessments. NFN stated that they have not provided their free, prior, and informed consent to the proposed road projects.

NFN explained that in the litigation, they have set out very clearly what NFN considers to be a meaningful process that would respect NFN's own laws and protocols in respect of decision making in their homelands. NFN stated their expectation for Ontario to go directly to NFN to engage according to protocol and to date, NFN has not received any offer from Ontario or the Proponents to move forward in such a way.

NFN explained that the format proposed for the ATRI Forum engages constitutionally protected rights and as such, the utmost care must be taken in its design. NFN expressed their lack of confidence in Ontario and proponents in putting necessary safeguards into place to have meaningful conversations about the "rights and interests of the community", which are integrally linked to NFN's laws, protocols, practices, and Indigenous knowledge of their territory. NFN also stated their confusion on who is hosting the ATRI Forum since the invitation came from the proponents, but Ontario is identified as the host and the Impact Assessment Agency of Canada (IAAC) is leading discussions. NFN stated that each of the parties has a different relationship with NFN.

NFN expressed appreciation for the attempt to integrate discussions on all three road projects, which NFN has long argued are actually three segments of one road project, intended to serve a potential mine site. However, NFN stated that the format of the ATRI Forum does not meet other conditions that NFN has set out in relation to meaningful consultation. NFN stated that the proposed road has the potential to bring profound changes that will irreversibly impact NFN's relationship to their homelands and ways of life as Indigenous people. As such, NFN demands a thorough and meaningful consultation according to their own community protocols.

Topics to be Discussed: Radio, Livestreams, Engagement Options
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent an email to Neskantaga First Nation (NFN)'s Chief Wayne Moonias which included a letter and poster advising that the WSR Project Team is hosting a Wawatay radio session from 12:00pm-1:00pm EST and livestream from 2:00pm-2:30pm EST on March 14, 2023. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on an overview of the Alternatives Assessment Process, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team will begin Virtual Information Sessions for Round 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if NFN has any questions or comments.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Neskantaga First Nation (NFN)'s Chief Wayne Moonias, with a letter inviting the community's participation in the Socio-Economic Primary Data Collection Program as part of the WSR Environmental Assessment/Impact Assessment (EA/IA). The letter was a follow-up to the letter sent on December 20, 2021, which outlined the purpose of the socio-economic study, types of information that the Project team wants to gather, and suggested primary data collection methods. The letter explained that the Project team has a timeframe for the EA/IA process to complete the studies and document the results, and the goal for the year is to complete a Draft Socio-Economic Existing Conditions Report. The letter explained that the Project team would like to collaborate with the community to discuss and collect socio-economic information and/or verify information gathered to-date based on current research to help understand existing social and economic conditions. The letter provided an overview of the preliminary Valued Components for the EA/IA to represent aspects of social and economic conditions that are important to the community which require information gathering. The letter requested an indication of NFN's interest in participating in the Socio-Economic Primary Data Collection Program by April 17, 2023, because it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by June 16, 2023.

Topics to be Discussed:
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Jeremy Greenberg of Falconers LLP, Rodney Northey of Gowling WLG, Kisha Chatterjee of Ontario Ministry of the Attorney General, Sanda Gogal and Robert Cohen of Cassels Brock & Blackwell LLP, with an attached letter addressed to Julian Falconer of Falconers LLP, on behalf of Neskantaga First Nation (NFN). The letter provided a formal response to the letter sent on June 22, 2022. The letter noted that Cassels Brock & Blackwell LLP were retained as legal counsel for the Webequie First Nation (WFN) in respect to the Ring of Fire application commenced by Chief Moonias and NFN in Court File No. CV-21-00672552-0000 (the “Application”). The letter explained that WFN was not named a party in the application, however, by way of an endorsement of Justice Koehnen dated November 10, 2022, the court invited WFN to intervene or otherwise participate in the Application “on the same basis as Marten Falls”, provided that WFN complied with Justice Koehnen’s court-ordered schedule. Since being provided with notice of the Application, WFN, though its legal counsel, has indeed participated in the Application in accordance with the existing court orders.

The letter explained that the parties to the Application have provided numerous affidavits pertaining to, among other things, the consultation process for both the Marten Falls Community Access Road (MFCAR) and the Northern Road Link (NRL). The parties are scheduled to conduct cross-examinations and file facta with the court in the coming months, and WFN will continue to participate in these proceedings going forward. In so doing, the WSR Project team anticipates that WFN’s conduct in respect of the consultation process for the NRL will be the subject of court review, along with the court’s review of the consultation process for the MFCAR.

In the letter Michael noted that he expects that the Application proceedings, and the court’s ultimate decisions in those proceedings, will be used to assess and to address any issues properly raised by your clients (NFN) pertaining to the NRL. The letter noted that they trust that it fully and satisfactorily responds to the inquiries raised by Falconers LLP and NFN in the letter from June 15, 2022.

Topics to be Discussed: Virtual Information Session
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Neskantaga First Nation's (NFN) Chief Christopher Moonias, with a letter and poster advising that the WSR Project Team is hosting a virtual information session for NFN on April 17, 2023, from 12:00-1:00pm EST with registration links for the session. The information session will include a presentation on WSR's Environmental Assessment / Impact Assessment activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps. The letter stated that the WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. The letter also included information on the Virtual Reality (VR) Open House where community members can access further information about the project and provide comments. The letter indicated that the WSR Project Team is available for additional engagement sessions and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if NFN has any questions or comments.

15:45
Dayna Scott, representative for NFN, responded to the email indicating that Joan Kuyek can be removed from the WSR Project distribution list.

Topics to be Discussed: Socio-Economic Primary Data Collection Program
Heather Swan of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Neskantaga First Nation (NFN)’s Chief Christopher Moonias as a follow up to the email sent on March 17, 2023 regarding the invitation to participate in the Socio-Economic Primary Data Collection Program as part of the Environmental Assessment / Impact Assessment. Heather asked the Chief if they had any questions regarding the original email and letter and indicated that the WSR Project team would like to hear back by April 17, 2023 as to NFN’s interest in participating in the program. The letter detailed the purpose of the socio-economic study, the type of information that the WSR Project team is seeking, the study area, how information will be collected, schedule, and next steps. Heather requested the Chief to let the WSR Project team know if they prefer a call to discuss the request in the letter.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Neskantaga First Nation (NFN) on April 17, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. Next, the Project Team played a voiceover presentation which included a testimony by the Webequie First Nation Chief Wabasse and information on WSR's Environmental Assessment / Impact Assessment (EA / IA) activities including alternative assessment methodology and results, valued components, preferred alternative and consultation approach and next steps. After the video presentation, Don discussed several concerns that had been previously raised by NFN. Don mentioned that the concerns are regarding the ownership and operation of the road, benefits sharing agreement with Neskantaga, cumulative effects of multiple projects, effect of aggregate resource extraction on landscape, impact on traplines, tracking of commitments and compliance review role of NFN, reconciliation under UNDRIP and herd ranges of caribou. The WSR Project Team had a platform which provided real time translation of the session in Oji-Cree to accommodate community members. The Project Team informed the audience that a recording of the session is made available through YouTube and the WSR Website for viewing. The team also informed the audience of the upcoming radio and livestreaming events the following day. There were no community members in attendance.

The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on Proposed Criteria and Indicators for Evaluation of Road Corridor Alternatives, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if NFN has any questions or comments.

Topics to be Discussed: WSR Response to NFN regarding ATRI Forum
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Christopher Moonias of Neskantaga First Nation (NFN) with a letter attached from Chief Cornelius Wabasse of Webequie First Nation (WFN) in response to the letter from Former Chief Wayne Moonias dated February 7, 2023, regarding the Aboriginal and/or Treaty Rights and Interests Forum held in Thunder Bay on February 8th and 9th, 2023.

The letter noted NFN's expectation that the Province of Ontario (the Province) come directly to NFN to engage according to the community's consultation protocols and noted that Provincial representatives have been copied on NFN's letter. The letter also noted that the team is aware of NFN's ongoing litigation. The letter indicated that the WSR Project team has yet to receive a clear and concise document outlining NFN's consultation protocol, and that the team has received NFN's "Community Protocol Development". The letter noted that the Project team has made several attempts to garner a better understanding of how this protocol should be used in relation to the WSR Project and as the Proponent, WFN will try to engage and consult with NFN one-on-one.

The letter noted the letter sent on December 20, 2022, which attempted to initiate conversation and engage the community on the Project, either as an in-person or a virtual meeting. Since then the Project team has sent letters bi-weekly with engagement options and no response has been received. The letter noted that the team has repeatedly attempted to engage a conversation with Neskantaga First Nation and will continue to do so.

The letter also explained that the ATRI Forum was not a public event and it was a closed Forum with invitations extended to those Indigenous communities who are scoped into the WSR, Northern Road Link (NRL), and Marten Falls First Nation Community Access Road (MFFN CAR) project assessments. The letter provided an overview of the ATRI Forum layout and indicated that if NFN had concerns about the Forum, the team would have been happy to have an advance discussion. The letter reiterated that the Forum is a step towards developing a shared understanding of ATRI within each distinct Project area. WFN understands that conversations at the Forum were preliminary in nature and that communities need time to think, reflect, and discuss with leadership and other community members on what they want to share with the team regarding ATRI. The letter noted that the team will continue to offer to meet individually with all Indigenous Communities, including NFN, to further discuss potential impacts to ATRI and will continue to do so throughout the assessment processes.

The letter noted understanding that the Province, Federal Government, and Proponent have different relationships with NFN and that WFN's intent was to discuss the different relationships and/or duties/roles as it relates to assessing potential impacts to ATRI. WFN thought it would be advantageous to provide multiple opportunities to meet with different Project representatives from the MFFN CAR, WSR, and NRL over a two-day period at one location.

The letter extended another offer to meet with NFN to discuss how WFN can engage and consult NFN on the WSR Project. WFN requested NFN to provide the Project team with a current version of the community's consultation protocol so that the team can review and prepare for a meeting.

Topics to be Discussed: Indigenous Knowledge / Land and Resource Use Program
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Christopher Moonias of Neskantaga First Nation (NFN) with an attached letter as a follow up to the correspondence sent on December 13, 2021 regarding NFN's participation in the Indigenous Knowledge / Land and Resource Use (IKLRU) Program for the WSR Project. The letter noted that the team also followed up by phone on January 17, 2022, and sent an email on January 20, 2022 to advise that the IKLRU Program has started and to confirm if the community was interested in participating. The letter noted that on January 20, 2022, David Peerla, representative on behalf of NFN responded to the Project team indicating concerns regarding COVID-19 and the Omicron variant to which the Project team sent an email on February 4, 2022 to address NFN's concerns and offer various virtual meeting options. Since then, the Project team has not received a response regarding NFN's interest in participating in the Program. The letter noted that NFN currently has an active funding agreement with the Province of Ontario to participate in the IKLRU Program for the WSR Project. The letter provided an overview of the information that the the IKLRU Program aims to collect as part of the Environmental Assessment / Impact Assessment and requested an indication of the community’s interest in participating in the IKLRU Program by the end of June 2023. The letter indicated that all knowledge that is shared will be safeguarded with a formal Confidentiality and Data Sharing Agreement, which will ensure all input from the community will remain the ownership of the community, and that no information will be shared beyond the Project team, without the consent of the community. The letter also indicated that as the Proponent, Webequie First Nation bears the responsibility for the Project and the assessment processes being applied to it. Michael provided his contact information and closed by wishing the community continued health and wellness.

McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) of the Webequie Supply Road (WSR) Project Team sent a fax to Neskantaga First Nation (NFN)'s Chief Christopher Moonias which included a letter, and poster advising that the WSR Project Team is hosting a Wawatay radio session from 12:00pm-1:00pm EST and livestream from 2:00pm-2:30pm EST on June 20, 2023. The letter and poster provided access links and a toll-free call-in phone number and explained that the sessions will include a presentation on Proposed Aggregate / Rock Source Areas, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, and other in-community locations. The letter also indicated that the WSR Project team has started conducting Virtual Information Sessions for Round 2 Part 2 where the Project team will share information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The letter explained that the session will include a presentation on the WSR Project activities followed by a question-and-answer period and that the team has a platform to allow for real-time translation to accommodate community members during the session. A link to the Project website was provided to view the upcoming schedule for virtual community information sessions and the letter indicated that the Project team will send the community a link to the session and Virtual Reality (VR) Open House created for each community, in the weeks prior to each community's session. Michael's email and cell phone contact information was provided if NFN has any questions or comments.

Topics to be Discussed: Virtual Information Session
Don Parkinson of SNC-Lavalin (SNC) and the Webequie Supply Road (WSR) Project Team held a virtual information session as part of the Consultation Round 2 for Neskantaga First Nation (NFN) on July 4, 2023. The information session began with an introduction regarding the purpose of the session and an overview of the agenda. The meeting began with a video of Chief Wabasse discussing the importance of the project to the Webequie Community. Don explained that the Part 2 of Consultation Round 2 will discuss the Project team’s work on the evaluation of alternatives for supportive infrastructure which includes aggregate rock sources for pits and quarry access roads and construction camps. Don presented information on how various factors were evaluated to produce preferred options based on a lower score. Don also explained the various engineering structures such as culverts, bridges, access roads etc. in detail and shared graphics illustrating what the proposed structures would look like after completion. The WSR Project Team had a platform which provided a real-time translation of the session in Oji-Cree. No participants from NFN were in attendance. Don reiterated that the Project Team would like to hear from NFN community members in-person and that a recording of the session would be available through YouTube and the WSR Website.

Topics to be Discussed: Aboriginal Treaty Rights and Interests Forum Invitation
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Christopher Moonias of Neskantaga First Nation (NFN) with an attached invitation for the Aboriginal and Treaty Rights and Interests (ATRI) Forum hosted by the Province of Ontario in Thunder Bay on November 21-23, 2023. The poster explained that Webequie First Nation and Marten Falls First Nation encourage the community to participate in the follow-up Forum to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link (NRL), and Marten Falls Community Access Road (MFCAR) Projects. The poster provided more information on how community representatives can attend, the purpose of the forum, who should attend from each community, and an email address for the community to RSVP. The Province of Ontario, Michael Fox of WSR, Andrea Nokleby of MFCAR, and Mishal Neesar of NRL provided their emails for further information if NFN has any questions or comments.

Topics to be Discussed: ATRI Forum Follow Up
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Christopher Moonias of Neskantaga First Nation (NFN) as a reminder to confirm if the community will be attending the Aboriginal and Treaty Rights and Interests (ATRI) Forum. The email reminded the community that the Province of Ontario is funding to cover travel expenses for up to 3 participants from the community and provided the email address to contact. The original invitation was also attached to the email which indicated that the ATRI Forum is being hosted by the Province of Ontario in Thunder Bay on November 21-23, 2023. The poster explained that Webequie First Nation and Marten Falls First Nation encourage the community to participate in the follow-up Forum to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link (NRL), and Marten Falls Community Access Road (MFCAR) Projects. Topics to be Discussed: WSR Consultation Progress Report Round 2
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Neskantaga First Nation's (NFN) Chief Christopher Moonias which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 2. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 2. The letter explained that the Consultation Progress Report summarizes the documents from Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025 and provided a list of topics and milestones which are proposed to be addressed as part of the engagement and consultation activities for Round 3. Michael's email and cell phone contact information was provided if NFN has any questions or comments.

An overview of the Consultation Progress Report for Round 2 was provided and the letter welcomed any feedback and input from the community so that issues and concerns can be addressed in the Environmental Assessment/Impact Assessment process for the Project and during Consultation Round 3.

The letter also advised that the WSR Project Team is hosting a livestream at 12:00pm EST and a Wawatay radio session at 2:00pm EST on March 4, 2024, with access links and the toll-free call-in phone number. The letter indicated that sessions will include a presentation on how Indigenous Knowledge is used in the EA, along with a question-and-answer period. The letter provided various community engagement options to help create awareness and attached a poster for staff to post on the community website, community Facebook page, other in-community locations. Michael's email and cell phone contact information if NFN has any questions or comments.

The fax also included the English WSR Newsletter – Issue 31 which provided information about the wolverine study, caribou study, and radio shows and livestream schedule for March 2024. The newsletter provided a link to the WSR Project website for finding additional information about the Project. Michael and Don Parkinson of AtkinsRéalis provided their email address and phone number if NFN has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 3 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team held a virtual session as part of Consultation Round 3 for Neskantaga First Nation (NFN). An Oji Cree translator provided real-time translation of all meeting content. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 3 Part 1 presentation that began with a review of the project to date, followed by a discussion of preliminary results for two valued components: surface water and fish and fish habitat. Participants were informed that the unabridged version of the presentation was available on the website and that this version reported preliminary results for several other valued components. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from NFN were in attendance.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Carolina Montrose and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Christopher Moonias of Neskantaga First Nation with an attached invitation for the Three Road Project Gathering & Expo hosted by Webequie First Nation (WFN) and Marten Falls First Nation (MFFN), The invitation noted that the event was funded by the Province of Ontario, our Treaty Partner and that it would be held in Thunder Bay on June 11-13, 2024. The invitation also noted the need to continue the momentum of the last two gatherings which focused on Aboriginal and/or Treaty Rights and Interests. In addition, the invitation notes that the Gathering & Expo will provide participants with an engaging and interactive space for consultation to learn more about the projects, ask questions, and share feedback focusing on water, peatlands and building roads on peatlands. Day 1 will be specifically for an Elders gathering, providing a comfortable space for Elders to gather and discuss the Projects. The invitation provided funding information and an email address to access the funding.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team was one of three hosts for the Three Roads Projects Gathering & Expo (Gathering) held at the Superior Inn and Conference Centre in Thunder Bay on June 11-13, 2024.

The purpose of the Gathering was to create a respectful, and collaborative space for consultation to continue to build an understanding of the three road projects and their potential impacts by: 1) Providing a comfortable space for Elders to gather and discuss the Projects; 2) Creating opportunities to engage directly with the Project proponents and consulting teams sharing information about the Projects and; 3) Discussing the upcoming draft Environmental Assessment Report / Impact Statement (EAR/IS) Review Process for WSR and the Marten Falls Community Access Road (MFCAR) Project.

Day 1 was set aside exclusively as an Elders Gathering to gather and engage with the individual Project Teams for all three projects to share their perspectives. By design, there were no government representatives in attendance on Day 1; only Indigenous people and Indigenous consultants, to encourage a more open and comfortable discussion. This was a new and innovative approach to engaging with Indigenous communities by the creation of a sacred space that was authentic, comfortable and open.

Day 2 was open to all participants. The morning focused on a series of technical presentations on key issues identified in previous engagement and consultation opportunities (peatlands (and other terrain), building roads on peatlands, aspects of water and fish populations). The afternoon was an Expo where participants could visit a series of booths to have one-on-one conversations with Project Team members from each of the road projects, various technical aspects of the Projects, Ontario and the Impact Assessment Agency of Canada.

Day 3 was also open to all participants. This session was a half day workshop on a common approach to reviewing the upcoming circulation of draft EAR/ISs for two of the three road projects so that there would be sufficient time to review and provide feedback. Each project team wanted to share the common approach to reviewing the draft EAR/ISs with Indigenous Nations early so that there was a shared understanding of what to expect and when. This would allow Indigenous communities to prepare themselves in advance with respect to resources to assist in the review.

Eligible Indigenous communities were invited to attend with 3 participants from each community being funded by the province. A total of 44 individuals signed in for Day one of the gathering, A total of 62 individuals signed in for Day 2, and a total of 48 individuals signed in for Day 3, but please note that not all participants opted to sign in. In total one participant from Neskantaga First Nation attended the Gathering over the 3 days.

Topics to be Discussed: Field Notice Fall Geo-Technical Drilling Program
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Neskantaga First Nation's (NFN) Chief Christopher Moonias regarding a Field Notice for the Fall geo-technical drilling program. The email indicated that AtkinsRéalis is providing a notification to complete a drilling program for the WSR project to further engineering design and support the coordinated provincial Environmental Assessment and Federal Impact Assessment. The letter is intended to provide notice as required by Land Use Permits pending issuance by the Ministry of Natural Resources (MNR). The email indicated that all works will be conducted in accordance with the permit conditions issued by MNR. Attached to the email was the Field Notice explaining what is happening, the schedule and what to expect. For further questions, the contact information for Hayden Yip of AtkinsRéalis was provided.

Topics to be Discussed: Early Circulation of the Draft EAR/IS
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Neskantaga First Nation's (NFN) Chief Christopher Moonias with a letter attached to the email regarding the planned early circulation of the draft Environmental Assessment Report / Impact Statement (EAR/IS). The letter advised that the Project team is planning an early circulation of the draft EAR/IS to provide the opportunity for NFN to review the draft EAR/IS prior to its release to stakeholders and the public for formal review. The letter explained that the team anticipates the draft EAR/IS to occur in late fall or early winter of the fiscal year 2024/2025 which will provide communities with an extended review period of 60-days to provide their review and comments. The letter explained that the team would follow up with the community as the project moves closer to the circulation of the draft EAR/IS, including the community would like to receive the document (electronic and/or hard copy). The letter explained that the Province of Ontario continues to offer funding agreements with eligible communities to participate in the EA/IA process for the WSR Project, including the review of the draft and final EAR/IS through the Participant Funding Initiative, and therefore will be following up to discuss resources needed by the community to take part in the extended review period of the draft EAR/IS. Michael provided his contact information for any questions or comments.

Topics to be Discussed: Response Letter to NFN
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Chief Christopher Moonias of Neskantaga First Nation (NFN) with an attached letter on behalf of Marten Falls First Nation and Webequie First Nation. The letter thanked NFN for the letter from October 7, 2024 regarding activities on October 4, 2024, with respect to helicopters in the area of Springer, Lavoie, Beteau and Dearden Lakes. The letter noted the temporary disruptions to the community fall hunt and how the team immediately responded upon receiving word about the helicopters. The letter explained that the team is required to undertake geotechnical investigations at proposed water crossings and potential aggregate sites, and install temporary groundwater monitoring wells which requires the use of helicopters to access where the work will take place. The letter noted the permits that were issued by the Ministry of Natural Resources and the actions taken to relocate the base camp to Webequie First Nation to avoid helicopter travel routes in the area. The letter closed by indicating how the project teams will continue to notify NFN of any field programs in advance of any field work and requested traditional hunt dates from the community's leadership in order to modify the dates of the field program.

Topics to be Discussed: Consultation Progress Report Round 3
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent a package via Canada Post to Neskantaga First Nation's (NFN) Chief Christopher Moonias which included a USB, a cover letter, and a copy of the WSR Consultation Progress Report Round 3. The USB contained files supporting Record of Consultation and an electronic version of the Consultation Report for Round 3. The letter explained that the Consultation Progress Report summarizes the documents from Round 3 of the Engagement and Consultation Program with Indigenous communities on the Project. The letter explained that the report is being provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and the Ministry of the Environment, Conservation, and Parks ToR Notice of Approval which requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA. The letter further explained that next steps will involve engagement and consultation options for communities to review assessment findings in the draft Environmental Assessment Report / Impact Statement, including targeted sessions with Indigenous communities for feedback and input on the results of the cumulative effects assessment for the Project. The letter noted that the future engagement and consultation sessions for communities are tentatively scheduled to start in Winter 2024/2025. Michael's email and cell phone contact information was provided if NFN has any questions or comments.

Topics to be Discussed: Virtual Information Session Round 4 Part 1
Don Parkinson of AtkinsRéalis and the Webequie Supply Road (WSR) Project Team conducted a virtual community meeting on the Zoom platform with Neskantaga First Nation. The meeting began with a video message from Chief Cornelius Wabasse of Webequie First Nation, then was followed by a pre-recorded Consultation Round 4 Part 1 presentation that began with a review of the project to date, followed by a discussion of the process of effects assessment, then an explanation of cumulative effects and how they are determined and managed. Once the main presentation was complete, participants were asked whether they had any questions or comments on the presentation or the project in general. No comments or questions were received and the meeting then came to a close. No participants from NFN were in attendance.

Topics to be Discussed: Three Road Project Gathering & Expo Invitation
Ian Frederickson and Michael Fox of Indigenous and Community Engagement (ICE) and the?Webequie?Supply Road (WSR) Project team sent an email to Chief Chris Moonias of Neskantaga First Nation with links to?invitations for the Three Road Project Gathering & Expo hosted by Webequie?First Nation (WFN) and Marten Falls First Nation (MFFN) with support from the Province of Ontario. The email noted that the gathering will provide an engaging and interactive consultation space to discuss the WSR draft EAR/IS, Marten Falls Community Access Road draft EAR/IS, and Northern Road Link Projects. The invitation provided the dates and locations for the events in Thunder Bay and Timmins: February 19-20, 2025, at the Valhalla Inn Hotel in Thunder Bay, and February 25-26, 2025, at the Cedar Meadows & Spa in Timmins. A general summary of event highlights was provided along with information about funding and attendance. The invitation asked the community to RSVP by January 31, 2025, to the Province of Ontario's email address provided?to reserve accommodations. The invitation noted that the event aims to?foster an understanding of the three road projects and their potential impacts while creating a collaborative space for consultation. For further questions regarding funding inquiries or additional details, the Province of Ontario's email address was provided.?

Topics to be Discussed: Winter 2025 Field Notice
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) sent an email to Neskantaga First Nation's (NFN) Chief Christopher Moonias with a winter field notice attached. The field notice indicated that field work has been scheduled to take place from February 19-March 1st, 2025 to manually remove caribou GPS radio tracking collars. The notice indicated that the collars were placed on the caribou to gather data on their populations, migration patterns, and habitat use. Following three years of data collection, the collars were set to automatically release in February 2024, however not all collars released as intended. The notice explained that a specifically trained team will manually remove collars without harming the animal. The notice also provided information on what to expect and where the team may need to travel but noted that the field team may need to travel outside the study area boundaries. A map was provided on the second page of the notice.

Topics to be Discussed: Three Road Projects Gathering & Expo June 2024 Report
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team was one of three hosts for the Three Roads Projects Gathering & Expo (Gathering) held at the Valhalla Inn in Thunder Bay on February 19-20, 2025.

The purpose of the Gathering was to provide an engaging and interactive consultation space to discuss the Webequie Supply Road (WSR) Draft Environmental Assessment Report / Impact Statement (EAR/IS), Marten Falls Community Access Road (MFCAR) Draft EAR/IS and Northern Road Link (NRL) Projects.

Day 1 of the event was set aside for Project overviews, consultation panels, individual community breakout sessions, and project expo including information to assist with review of the draft EAR/IS for MFCAR and WSR and cumulative effects assessment.

Day 2 of the event covered the Aboriginal and/or Treaty Rights and Interests (ATRI) panel discussions, breakout sessions, and project expo including information to assist with review of the draft EAR/IS and MFCAR for WSR and cumulative effects assessment.

Eligible Indigenous communities were invited to attend with 3 participants from each community being funded by the province. A total of 28 individuals signed in for Day one of the gathering, A total of 38 individuals signed in for Day 2, but please note that not all participants opted to sign in. In total 1 participant from Neskantaga First Nation (NFN) attended the Gathering over the 2 days.

Topics to be Discussed: WSR Newsletter – Issue 42, 43
McKenna Baxter and Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent a package via Canada Post to Neskantaga First Nation's (NFN) Chief Gary Quisses, with English WSR Newsletter - Issue 42 and 43. Newsletter 42 provided information about the Three Road Projects Gathering, Cumulative Effects, and the upcoming Draft Environmental Assessment. Newsletter 43 provided information about the virtual community information sessions for round 4, the virtual water crossing simulation, and the early circulation of the draft Environmental Assessment Report/Impact Assessment. Michael and Don Parkinson of AtkinsRéalis provided their email address and phone number if NFN has any questions or comments.

Contact Date: Jun 09, 2025 09:00 Method: E-mail
Topics to be Discussed: Early Circulation of the Draft EAR/IS
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Gary Quisses of Neskantaga First Nation (NFN) with an attached letter regarding early circulation of the Draft Environmental Assessment Report / Impact Statement (Draft EAR/IS) for Review for the WSR Project. The letter advised the community that the Draft EAR/IS is now available for the community to review. The letter provided an overview of what is documented in the Draft EAR/IS and explained that it is being circulated in two stages to provide communities with an extended review period to provide comments on the document for a total of 120 days. The two stages of circulation are: 1) Early access for Indigenous communities from June 9 to October 7, 2025, and 2) Public and Stakeholders from August 8 to October 7, 2025. The letter explained that enclosed in the package is the Draft EAR/IS for the WSR Project for review which includes: One hard copy of the main body of the Draft EAR/IS, an electronic copy of the Draft EAR/IS and Appendices, and one hard copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree, and Cree. The letter also provided a link to the Draft EAR/IS on the Project website. The letter also noted that the draft Record of Consultation and Engagement with Indigenous communities, public, and stakeholders is not included in the Draft EAR/IS, but will be provided to the community when the Draft EAR/IS is released for public and stakeholder review on August 8, 2025. In the interim, consultation and engagement activities received from the communities is documented in the Consultation Progress Reports for Rounds 1, 2, and 3, previously sent to the community at key milestones in the EA/IA process, and can also be found on the Project website. The letter encouraged the community to actively participate in the review of the Draft EAR/IS and provided an email and/or mailing addresses to submit comments. For any questions or to schedule a meeting with the Project Team, Michael also provided his email and phone number.

Contact Date: Jun 09, 2025 10:30 Method: E-mail
Topics to be Discussed: Revised Link to Access the Draft EAR/IS
Michael Fox and McKenna Baxter of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project team sent an email to Chief Gary Quisses of Neskantaga First Nation (NFN) with a revised letter attached regarding early circulation of the Draft Environmental Assessment Report / Impact Statement (Draft EAR/IS) for Review for the WSR Project. The letter advised the community that the Draft EAR/IS is now available for the community to review and provided a revised link to view the Draft EAR/IS on the website. The letter provided an overview of what is documented in the Draft EAR/IS and explained that it is being circulated in two stages to provide communities with an extended review period to provide comments on the document for a total of 120 days. The two stages of circulation are: 1) Early access for Indigenous communities from June 9 to October 7, 2025, and 2) Public and Stakeholders from August 8 to October 7, 2025. The letter explained that enclosed in the package is the Draft EAR/IS for the WSR Project for review which includes: One hard copy of the main body of the Draft EAR/IS, an electronic copy of the Draft EAR/IS and Appendices, and one hard copy of Plain Language Summaries for each section of the Draft EAR/IS in English, Oji-Cree, and Cree. The letter also noted that the draft Record of Consultation and Engagement with Indigenous communities, public, and stakeholders is not included in the Draft EAR/IS, but will be provided to the community when the Draft EAR/IS is released for public and stakeholder review on August 8, 2025. In the interim, consultation and engagement activities received from the communities is documented in the Consultation Progress Reports for Rounds 1, 2, and 3, previously sent to the community at key milestones in the EA/IA process, and can also be found on the Project website. The letter encouraged the community to actively participate in the review of the Draft EAR/IS and provided an email and/or mailing addresses to submit comments. For any questions or to schedule a meeting, Michael also provided his email and phone number.

Attached File: Web-WSR Letter to NFN Re Early Circulation of Draft EAR IS for Review-2025-06-09RevB.pdf

Contact Date: Jun 09, 2025 10:35 Method: Hand Delivered Letter
Topics to be Discussed: Hand Delivery of Draft EAR/IS
Tony McGuire and Adrien Harpel of TheyMedia went to Neskantaga First Nation (NFN) to hand deliver the hard copy of the Draft Environmental Assessment Report / Impact Statement (EAR/IS) on behalf of the Webequie Supply Road (WSR) Project team. The following documents were included in the package: One hard copy of the main body of the Draft EAR/IS, an electronic copy via USB of the Draft EAR/IS and Appendices, and one hard copy of the Plain Language Summaries for each section of the Draft EAR/IS in English, Cree, and Oji-Cree. Tony attempted to deliver the package to the band office, but NFN did not accept the delivery.
Attached File: Web-WSR Letter to NFN Re Early Circulation of Draft EAR IS for Review-2025-06-09RevB.pdf

Contact Date: Jun 09, 2025 19:54 Method: E-mail
Topics to be Discussed: Delivery of Draft EAR/IS
Michael Fox of Indigenous and Community Engagement (ICE) and the Webequie Supply Road (WSR) Project Team sent an email to Chief Gary Quisses of Neskantaga First Nation (NFN) with a letter attached to the email regarding the delivery of the Draft Environmental Assessment Report/Impact Statement (EAR/IS). The letter offered Michael's sincerest apologies for the way the draft EAR/IS was delivered to NFN. The letter recognized that the verbally unannounced, in-person delivery of the draft EAR/IS report by charter plane was unexpected and may have caused confusion or concern. The letter explained that the decision to use a chartered delivery was made on short notice due to the Canada Post labour strike position a few weeks before. Given that Canada Post could not guarantee delivery of the packages, it created uncertainty around delivery timelines for time-sensitive documents. It was the Project team's intention to provide hard copy to support First Nations in reviewing documents, which are also available online. The letter acknowledged that this method of delivery of the draft WSR EAR/IS report should have been directly communicated to NFN verbally in advance (not only in writing) out of respect for leadership and community protocols. The WSR Project team deeply regrets that this did not occur and understand the importance of maintaining trust and transparency in communications, especially when engaging with NFN on matters as important as the WSR Project. The letter stated that the team remains committed to working in a manner that honors the community's expectations and protocols. The letter also recognized that NFN decided not to accept the hard copies of the draft EAR/IS report. The letter requested that NFN let the team know if they change their mind about accepting a hard copy of the draft EAR/IS report, as a second attempt can be made to deliver to NFN via Canada Post. In the meantime, the letter stated that NFN can view the full report online and provided the link. The letter asked NFN to accept the team's apologies and encouraged NFN to let the team know how to improve the approach. The letter indicated that the team remains committed to meaningful and respectful engagement and welcomes the opportunity to speak with NFN directly about the draft report. The letter closed by thanking NFN for continued leadership and guidance. Attached to the letter was the email that was sent to NFN's Chief Gary Quisses on June 9, 2025, which indicated that the hard copy package of the Draft EAR/IS is currently "in transit" to the community.

WSR
WEBEQUIE
SUPPLY ROAD

November 2, 2021

Dear Chief,

On October 8th, 2021, after extended consultations, the Minister of the Environment, Conservation and Parks approved the final Terms of Reference with amendments for the Webequie Supply Road (WSR) project. You can find these amendments on the following website: https://www.ontario.ca/page/webequie-supply-road-project We are now proceeding with the environmental assessment in accordance with the approved Terms of Reference.

As part of the WSR communication and engagement activities, the project team produces regular project newsletters, which you find enclosed a number of copies for distribution to your community members.

If you have any questions, please do not hesitate to ask or phone me at 807-472-6147. We wish you and your community continued health and wellness.

Sincerely,

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road

WSR240-WEB-PR-LT-0299 Web-WSR letter to Chiefs re Newsletter and approved ToR-2021-11-01

November 22, 2021

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment studies. This upcoming week, **WSR Presents: Caribou and Wolverine/Wildlife and Wildlife Habitat/Species at Risk/Breeding Birds.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 23rd at 2:00-3:00 (EST)**. We encourage you and your community members to listen, for this will give your community membersthe opportunity to ask questions. You may call during the radio show at the **toll-free number:1-844-424-0500.**

In addition, the live streaming event is scheduled on the same day as the above radio show at **4:00pm – 4:30pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. All sessions are recorded and accessible on YouTube, you can subscribe at: Webequie Supply Road - YouTube. We have regular updates on our Facebook page that features community photos, informative videos, Frequently Asked Questions along with project information. You can follow WSR on Facebook at Supply Road | Facebook, Twitter, Instagram and http://www.linkedin.com/company/wfnsupplyroad You may also call with questions on the same toll-free number provided above during the live streams.

The WSR Project Team is offering opportunities of engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the WSR Project.

Engagement Options

Method	Description
Focus Group Sessions	With proper Covid-19 protocols in place, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment studies. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse groups(women, elders, youth, land users, etc.)
Community Sessions	With proper Covid-19 protocols in place, community information sessions can be conducted, whereby the WSR Project Team will discuss the Environmental Assessment process with a question-and-answer period at the end of the presentation.
Drop-in Sessions	With proper Covid-19 protocols in place, community members can drop-in at a safe location todiscuss the Environmental Assessment process with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the Environmental Assessment process facilitated by the WSR Project Team using Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the Environmental Assessment process to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the Environmental Assessment studies presentation and set up a conference call number to go through the presentation based on the area of interest your team wants to focus on and answer any questions.
Local Radio Call In Show	Using the local community radio, the WSR can present the Environmental Assessment studies with a local translator that the WSR will pay for and explain the Environmental Assessmentprocess. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the Environmental Assessment process.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching the WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, then we can mail these hardcopy WSR poster to your community for local distribution and all you need to do is email or call us to inform us that you need hardcopies of WSR poster.

Lastly, given the high and daily usage of social media channels by Indigenous leaders and members, you, your Council, and your staff can also follow us on Facebook, Twitter, Instagram, and LinkedIn to stay updated and repost it on your social media accounts to assist in information access, information dissemination, and information request associated with the WSR Project's environmental studies.

To obtain information on the Project, or to provide comments, please visit our website at http://www.supplyroad.ca or contact me at 807-472-6147.

Michael Fox
Regional Consultation Coordinator
Webequie Supply Road
michael.fox@supplyroad.ca

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Don Parkinson, Consultation Lead, SNC-Lavalin Inc.

INDIGENOUS KNOWLEDGE / INDIGENOUS LAND AND RESOURCE USE PROGRAM FOR THE WEBEQUIE SUPPLY ROAD PROJECT

Information Sharing Agreement

Purpose

The purpose of the Indigenous Knowledge and Land and Resource Use (IKLRU) Program Sharing Agreement is to:

- Document the shared understanding of how the Neskantaga First Nation IKLRU Study for the Webequie Supply Road Project will be completed;
- Document the anticipated activities that will be part of the IKLRU Program; and
- Document how IKLRU information will be integrated into the Environmental Assessment Report (EAR) / Impact Statement (IS).

Confidentiality and IK / TLU Sharing

- Webequie First Nation acknowledges that all IKLRU information is the property of Neskantaga First Nation and the individual knowledge holders who contributed to the study.
- Webequie First Nation will disclose the IKLRU as required through the regulatory process only.
- Webequie First Nation will store the IKLRU information in a secure location and it will be provided to the appropriate Project staff and consultants only.
- Webequie First Nation will use the IKLRU information to contribute to the EAR / IS.
- Webequie First Nation will not include the full IKLRU report or study in the EAR / IS.
- Webequie First Nation will provide relevant IKLRU information to the appropriate disciplines for use in their EAR / IS sections.
- Webequie First Nation will use the IKLRU information to assess impacts on Neskantaga First Nation land and resource use; thus, the IK section of the EAR / IS will summarize the IKLRU information without disclosing specific locations of use.
- Webequie First Nation will use the IKLRU information for the Project regulatory process only, including planning, design, assessment, construction, operation, maintenance and decommissioning.

IKLRU Study

Neskantaga First Nation and Webequie First Nation agree that the type of information in the IKLRU Study Plan and scope will be included in the IKLRU Study.

The IKLRU Study will include information about the geographic location of data collected. This can be as numerical coordinates or as a location on a map with appropriate reference points.

Webequie First Nation will accept any additional land and resource use-related information within the IKLRU Study Area, as community members deem appropriate.

Neskantaga First Nation and Webequie First Nation agree that upon completion of the IKLRU Study, Neskantaga First Nation will approve the Report for use in the EAR / IS.

Signing this Agreement

Neskantaga First Nation signing of this Sharing Agreement is no way represents their support for the Webequie Supply Road Project.

Re: Indigenous Knowledge / Indigenous Land and Resource Use Program for the Webequie Supply Road Project

Dear Chief Wayne Moonias,

We hope that this letter finds you and your community well.

Webequie First Nation (WFN) is the proponent of the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will extend from Webequie Airport to the mineral deposit area near McFaulds Lake as shown in the enclosed project map. WFN has started the provincial environmental assessment (EA) and a formal Notice of EA Commencement was issued on October 29th, 2021. The WSR Project is also subject to a federal impact assessment (IA) and the Notice of Commencement of the IA was issued on February 24th, 2020. Collectively the EA and IA are referred to as the "assessments" and will examine potential effects of the WSR Project including mitigation and monitoring, and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS). We will continue to provide you with updates as the assessment process continues, and welcome and appreciate your input throughout the planned consultation and engagement activities.

With this letter, we would like to share with you that we are commencing the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program for the Project. The IKLRU Program is a critical component of the information base upon which the assessments will rely. The information generated through the Program will be used in concert with scientific approaches, and both knowledge systems will be given equal consideration in forming the foundation for baseline conditions, predicting potential project effects, including potential impacts to your inherent Indigenous rights and interests.

The purpose of the IKLRU Program is to:

- Promote sharing of IKLRU information relevant to the Project;
- Help identify potential impacts of the Project, including those on Indigenous rights and interests; and

- Collaborate and work with Indigenous communities to enhance positive impacts or to identify measures to avoid/reduce potential effects on Indigenous rights and interests.

As traditional stewards of the land, we all must make certain that development in the area appropriately addresses the rights, interests, values, traditions, concerns, and aspirations of Indigenous communities within the assessment context, during the life of the WSR Project, and beyond. It is in this spirit that we invite Neskantaga First Nation to participate in the IKLRU program.

The IKLRU Program for the WSR Project will occur in two phases:

1. Collecting existing Indigenous Knowledge and information on Indigenous land and resource use that communities are prepared to share with WFN in order to help inform the early stages of the assessments; and
2. Completing project-specific Indigenous Knowledge and Lands & Resource Use studies, or compiling information/data in other form, that can be provided to the Project Team for integration into the assessment.

At this point, we are enquiring whether Neskantaga First Nation is interested in participating in the IKLRU Program in either (or both) phases of the Program. We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the IKLRU Program for the WSR Project. In addition, the Project Team can help communities access this funding, where applicable.

While the IKLRU Program is distinct from the Consultation Program for the WSR Project, the two are complementary and collectively serve to solicit Indigenous perspectives, values and inputs with respect to project planning and assessment process. You may share as much or as little IKLRU information as you wish, and in whatever form you prefer. Your community will also have the opportunity to review the EAR / IS to ensure accuracy of IKLRU information, including if it has been adequately, appropriately, and respectfully represented within the assessment process.

While there are significant benefits to integrating Indigenous Knowledge from your community in the assessment, we also recognize that this knowledge belongs to your community and that confidentiality needs to be respected. Our approach to working with your community on the IKLRU Program will be guided by the following key principles:

- The people of your community are a source of knowledge on uses of the land and its resources, associated cultural practices, and community values.
- We are your partner – our goal is to work together with you to conduct the IKLRU Program in a way that contributes to your community's well-being so that Indigenous Knowledge and land and resource use information can be meaningfully integrated into the assessment process.

Protection and confidentiality of IKLRU information is of the utmost importance to the Project Team. To honour and respect this important information, we propose establishing an Indigenous Knowledge Sharing Agreement with your community prior to the collection and use of your community's information. The Sharing Agreement would outline how confidential and sensitive information would be utilized in the WSR Project's assessment and design process. It would also adhere to all community-specific protocols and OCAP (ownership, control access and possession) principles. Once you've confirmed participation in the IKLRU Program, we will work with you to prepare the Sharing Agreement. We have attached a draft Indigenous Knowledge Sharing Agreement for your review and consideration.

In order to confirm that Neskantaga First Nation is interested in participating in the IKLRU Program, we ask that you contact us by January 27, 2022. Our Project Team will also reach out to you in a few days if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council to discuss next steps, including the methods and protocols your community will follow.

To express your community's interest or if you have any questions regarding the IKLRU Program or the WSR Project, please feel free to contact Michael Fox (807-472-6147; michael.fox@indigenousengagement.ca) or Brianna Patrick (204-223-5770; brianna.patrick@indigenousengagement.ca) of the Project Team.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Chief Cornelius Wabasse
Webequie First Nation

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Wayne Moonias,

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation (WFN) is conducting an Environmental Assessment (EA) study under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* for the Webequie Supply Road (WSR) Project, a proposed 107 km all-season road that will facilitate the movement of materials, supplies and people from the Webequie Airport to the mineral deposit area near McFaulds Lake (as shown in the enclosed project map). WFN has started the provincial EA and a formal Notice of EA Commencement was issued on October 29th, 2021. The Notice of Commencement of federal IA was issued on February 24th, 2020. Collectively, the EA and IA are referred to as "the assessments" and will examine potential effects of the WSR including mitigation and monitoring and the design of the Project. We are using a coordinated approach to ensure all federal and provincial requirements are met and will publish the results of the assessments in one body of the documentation called the Environmental Assessment Report / Impact Statement (EAR/IS).

Purpose of Socio-Economic Study

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socio-economic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. The study will involve the following:

- Collecting information on existing socio-economic conditions;
- Defining the study area(s) within which potential effects are considered;

- Assessing socio-economic effects, including identifying criteria and indicators to evaluate and measure the potential effects;
- Identifying appropriate mitigation measures to eliminate or reduce potential effects;
- Identifying net effects following mitigation; and
- Assessing cumulative effects.

Socio-Economic Information Required

As part of the socio-economic study, we are seeking information related to the preliminary criteria, also known as valued components (VCs), that have been identified to date. VCs are aspects of the environment that have physical, biological, social, economic, cultural, and health-related importance to Indigenous communities, public, federal and provincial authorities and interested stakeholders, and have the potential to change as a result of the Project. The preliminary socio-economic VCs reflect input received during the WSR engagement and consultation activities undertaken so far. Indigenous communities, groups and the public will have the opportunity to provide input and feedback to help further refine the criteria throughout the EA / IA process.

The preliminary VCs representing criteria for socio-economic information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;
- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

Socio-Economic Study Area

The socio-economic study consists of the following study areas to capture the potential direct and indirect effects of the Project:

Local Study Area (LSA) – the area where largely direct, and indirect effects of the Project are likely to occur, as shown in the attached Map. The LSA is divided into two (2) sub-categories which reflect the differences between the VCs for the socio-economic study:

- The LSA for **Population and Demographics, Community Services and Infrastructure and Local and Regional Economy** is defined as WFN and those communities who have asserted shared territory with WFN and/or who may experience the greatest potential effects of the Project
- The LSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined LSAs for the fish and fish habitat, surface water, vegetation, general wildlife, and air quality VCs.

Regional Study Area (RSA) – the area where potential, largely indirect and cumulative effects of the Project in the broader, regional context may occur, as shown in the attached Map. Similar to the LSA, the RSA is divided into two (2) sub-categories which reflect the differences between VCs for the socio-economic study:

- The RSA for **Population and Demographics, Community Services and Infrastructure, and Local and Regional Economy** consists of the 14 First Nations identified by the federal and provincial governments for engagement and consultation, as well as, City of Thunder Bay, Municipality of Greenstone, Township of Pickle Lake, Municipality of Sioux Lookout.
- The RSA for **Land and Resource Use** corresponds to the outermost boundaries of the combined RSAs for fish and fish habitat, surface water, vegetation, and general wildlife VCs.

Socio-Economic Information Gathering

Socio-economic information has been gathered by the Project Team from secondary sources through a desktop review of open-source data including Indigenous community and government websites, economic development plans, land use plans, and other reports and studies. We are now commencing our primary data collection program to help bolster and enhance this secondary source information. The Project Team is collecting information using the following methods to capture information regarding current social, economic and cultural conditions: 1) Surveys, 2) Focus Groups, and 3) Key Informant Interviews. **With this letter, we would like to invite Neskantaga First Nation to participate in the WSR socio-economic primary data collection program. The program components are outlined in further detail below.**

1. Community Socio-Economic Survey
   - Your community may choose from the following list of in-person and/or online survey delivery methods:
     a) Online survey – community members can complete the survey via Survey Monkey (an online survey tool). The link can be made available on your community's website and/or social media.
     b) Intercept surveys – survey coordinators can be placed in different locations around the community to survey community members. Note that a short training program will be provided to in-person survey coordinators/administrators (option b), including compensation for their efforts.

c) Community sessions – community members can complete the survey in a collective format with the survey projected on a screen.
d) Drop-in sessions – community members can drop in (e.g., band office) to complete a survey.
e) At scheduled Open House Events – open houses as part of the engagement and consultation activities planned for Indigenous communities, and in the City of Thunder Bay on-reserve and off-reserve community members will be offered an opportunity to complete the survey.

- Questions will focus on demographics (e.g., age, gender, income, education, employment, housing, social services, health, safety).
- Each survey will include a guide with directions.

2. Focus Groups
   - The aim of the focus groups is to allow for an in-depth understanding of the experiences and insights of community members and for participants to have an opportunity to talk at length about their issues of concern and aspirations.
   - Focus groups will be comprised of 6-10 participants each with a series of open-ended questions.
   - One session will be held for each diverse population group in the community, including women, men, Elders, youth, land users/knowledge keepers, etc.
   - The sessions will be carried out either in person or virtually, and with permission can be recorded using an audio/video device with a notetaker present to ensure comments are accurately captured.
   - Topics to be explored include access to land, resources, infrastructure and services, safety, employment, education and training, and experiences with development and aspirations for.

3. Key Informant Interviews
   - Interviews will be conducted with individuals in the community who have special knowledge or information to contribute to the socio-economic study, such as social and health services (e.g., childcare, wellness counselling, youth support, nursing clinic, etc.), infrastructure, economic development and housing.
   - Key informants will be interviewed either by telephone, videoconference, or during in-person engagement and consultation activities. Interviews will be approximately 30 to 60 minutes in duration, depending on the number of questions, and with permission will be recorded electronically to assist in the preparation of transcripts.

All primary data collection activities will adhere to the community's cultural protocols and be subject to OCAP (ownership, control, access and possession) principles. Additionally, any proposed in-person activities will adhere to provincial and community COVID-19 protocols and will respect community and participants' preferences and comfort levels. Your community may wish to have a

participatory research form to outline the purpose of the study, the type of information needed and how the information will be handled.

Participant Funding

We understand that the Province of Ontario is offering participant funding for eligible Indigenous communities to participate in the EA/IA process which includes the socio-economic primary data collection program. If you do not have funding in place, the Project Team may be able to help your community access this participant funding program, where applicable.

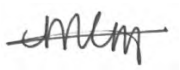
Next Steps

In order to confirm that Neskantaga First Nation is interested in participating in the socio-economic primary data collection program, please contact us by February 3, 2022. I will also reach out to you a few days in advance if we haven't heard from you. Once you have confirmed participation, we will contact you to arrange a meeting with Chief and Council, or the delegated person(s) to assist the Project Team, to discuss next steps, including opportunities to integrate components of the socio-economic primary data collection program with other upcoming engagement and consultation activities in your community.

To express your community's interest or if you have any questions regarding the socio-economic primary data collection program or the WSR Project, please feel free to contact me at 416-668-3298 or marian@indigenousengagement.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,



Marian Tibor-McMahon, Deputy Project Manager / Socio-Economic Specialist
Webequie Supply Road

Craig Wallace, Project Manager, SNC-Lavalin Inc.

Encl.
Project Map

Due to the COVID-19 pandemic and current restrictions in effect, the Project Team understands the health and safety concerns of in-person engagement activities. As such, the Project Team is providing a number of virtual primary data collection methods to collect socio-economic baseline information in a manner that is safe for community members.

Virtual Socio-Economic Primary Data Collection Options

Method	Description
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) with a series of open-ended questions facilitated by the Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms. One focus group with the following groups: women, elders, youth, land users, men.
Virtual Key Informant Interviews	Using any of the online platforms listed above or by telephone, to interview individuals with special knowledge or information on community infrastructure capacity and service availability and needs, housing supply and demand, community health and well-being, economic development, etc.
Online Surveys	Community members may complete a social survey using SurveyMonkey, an online survey tool. The survey will include questions about demographics (age, gender, income, education, employment), housing, social services, safety, and social cohesion.
Paper Copies of Survey	Paper copies can be provided to the community to place at community sites for community members to complete surveys. Surveys are to be scanned and returned to the Project team for analysis.
Virtual One-on-One Surveys	Project Team can administer the survey one-on-one with interested community members.
Phone Survey	Project Team can survey interested community members via telephone.
Virtual Community Session	Virtual community session where community members can complete the social survey in a collective format with the survey projected on a screen and a community member to translate the questions and answers. The Project Team collect data virtually.

WSR
WEBEQUIE
SUPPLY ROAD

Due to the COVID-19 pandemic and current restrictions in effect, the Project Team understands the health and safety concerns of in-person engagement activities. As such, the Project Team is providing a number of virtual information sharing methods to collect Indigenous knowledge and Indigenous land and resource use baseline information in a manner that is safe for community members.

Virtual Socio-Economic Primary Data Collection Options

Method	Description
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) with a series of open-ended questions facilitated by the Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms. One focus group with the following groups: women, elders, youth, land users, men.
Virtual Mapping Workshops	Open discussion with 4-6 land and resource users with a semi-structured guide facilitated by the Project Team using a videoconferencing platform. To facilitate mapping exercises with land and resource users, we can use Mural, a virtual platform that creates a collaborative workshop environment, making it easier to share notes and ideas over a map to indicate areas for land and resource use and areas of significance in real time.
Virtual Key Informant Interviews	Using any of the online platforms listed above or by telephone, to interview individuals with special knowledge or information on areas of historical / ceremonial / cultural significance, traditional activities, Indigenous Treaty Rights, waterways/travel routes, plants and plant gathering, wildlife and hunting, etc.
Online Surveys	Community members may complete a survey using SurveyMonkey, an online survey tool. The survey will include questions about Indigenous knowledge and Indigenous land and resource use, such as hunting activities, sites of significance, country foods harvested, location of water bodies, etc.
Paper Copies of Survey	Paper copies can be provided to the community to place at community sites for community members to complete surveys. Surveys are to be scanned and returned to the Project team for analysis.
Virtual One-on-One Surveys	Project Team can administer the survey one-on-one with interested community members.
Phone Survey	Project Team can survey interested community members via telephone.
Virtual Community Session	Virtual community session where community members can complete the survey in a collective format with the survey projected on a screen and a community member to translate the questions and answers. The Project Team collect information virtually.

February 4, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on the Environmental Assessment and Impact Assessment (EA / IA) process. This upcoming week's session is: **WSR Presents: EA / IA Process.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **February 9th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is exploring virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

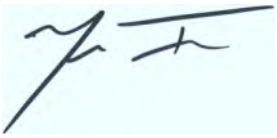
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

ARCTIC
VOL. 44, NO. 4 (DECEMBER 1991) P. 267-274

The Fisheries of an Ojibwa Community in Northern Ontario

M. HOPPER[1] and G. POWER[1]

(Received 26 January 1990; accepted in revised form 13 February 1991)

ABSTRACT. Subsistence fishing provides an important source of food for the remote Ojibwa community of Webequie, located along the Winisk River in northern Ontario. Field observations during the summer of 1988 were combined with a recall survey to estimate catches from October 1987 through September 1988. Of 133 potential fishermen, 90 were surveyed. The total community harvest was estimated to be 83 810 fish, round weight 108 210 kg. After adjustments, this provided 118 kg round weight/person/year, or 0.21 kg/person/day edible fish for consumption. Lake whitefish (*Coregonus clupeaformis*), walleye (*Stizostedion vitreum*), northern pike (*Esox lucius*) and suckers (*Catostomus commersoni* and *C. catostomus*) were dominant in the catch. Lake sturgeon (*Acipenser fluvescens*) attracts special fishing effort. Older males (> 40 years old) are the primary fishermen. Fixed gill nets take 95% of the harvest, most of which is consumed. Commercial fishing seems to be disappearing. Recreational fishing is a potential source of revenue. Subsistence fishing tends to be overlooked in development and management schemes but is clearly an important activity.

Key words: subsistence fishing, Ojibwa, native harvest survey, northern Ontario fisheries

RÉSUMÉ. La pêche de subsistance est une source alimentaire importante pour la communauté isolée d'Ojibwa de Webequie située le long de la rivière Winisk au nord de l'Ontario. Des observations sur place de l'été 1988 furent combinées avec un sondage de rappel pour estimer le nombre de prises pendant la période d'octobre 1987 à septembre 1988. Des 133 pêcheurs possibles, 90 furent sondés. Le total de prises effectuées fut estimé à 83,810 poissons, totalisant un poids rond de 108,210 Kg. Après des ajustements, cela fournit 118 Kg de poisson entier/personne/année ou 0.21 Kg/personne/jour de poisson comestible. Les prises dominantes furent le Grand Corégone (*Coregonus clupeaformis*), le Doré (*Stizostedion vitreum*), le Grand Brochet (*Esox lucius*) et le Meunier (*Catostomus commersoni* et *C. catostomus*). L'Esturgeon de lac (*Acipenser fluvescens*) attire des efforts spéciaux de pêche. Les hommes plus âgés (> 40 ans) sont les principaux pêcheurs. Les fillets maillants fixés sont responsable de 95% des prises, dont la plupart sont consommées. La pêche commerciale semble disparaître. La pêche sportive est une source potentielle de revenue. La pêche de subsistance a tendance à être négligée dans le développement et dans les plans de gestions, mais est clairement une activité importante.

Mots clés: pêche de subsistance, Ojibwa, relevés des prises effectuées par les aborigènes, les pêches du nord de l'Ontario

INTRODUCTION

Indigenous people in northern Canada rely on food from the wild, although they live in permanent settlements patterned after those in southern Canada for at least part of the year. Native harvest studies are carried out to estimate the quantities of fish and wildlife used over periods of time by groups of indigenous people (Usher *et al.*, 1985; Usher and Wenzel, 1987). Native, in this context, is an inclusive term for status and non-status Indian, Inuit and Metis (Usher and Wenzel, 1987). Native subsistence fisheries capture a substantial proportion of the fish harvested in the North. These fish are used locally for human consumption, dog food and trap bait. They may be given away or exchanged in the community but, in principle, not sold externally for cash (Usher and Wenzel, 1987; Berkes, 1988). This definition may be broadened to include sales to neighbouring villages (Craig, 1989). Subsistence fishing has been carried out for generations, while commercial and sport fisheries are recent introductions. Quantifying the harvest is one way of portraying the importance of fish to a northern community.

Most estimates of the fish harvest of northern native Canadians (Berkes, 1983; Boivin *et al.*, 1989; Berkes, 1990) are recent and were carried out in connection with development proposals. In neighbouring Alaska more has been accomplished (Wheeler, 1987; Andrews, 1988; Walker *et al.*, 1989; Craig, 1989), in part because of conflicts between subsistence and commercial use of valuable salmon species. Post-harvest questionnaire ("recall") surveys are the commonest method of collecting data and were used in Alaska, the Northwest Territories (Gamble, 1984) and in large-scale projects in northern Quebec (James Bay and Northern Quebec Native Harvesting Research Committee, JBNQNHRC, 1982). Most subsistence fishing and hunting by registered native people in Canada is not subject to statistical reporting. In recent years, however, non-native Canadians have expressed concern about the effects of native harvesting on northern fish and wildlife stocks (Usher, 1987). Northern development and the need to conserve fish stocks for local harvest have precipitated a need to measure harvests to document native dependence on local renewable resources and assess the consequences of the development (Pearse, 1988; Berkes, 1990).

The Ojibwa of northern Ontario have traditionally depended on a regular harvest of fish (Rogers, 1962). Whitefish (*Coregonus clupeaformis*), walleye (*Stizostedion vitreum*), northern pike (*Esox lucius*), suckers (*Catostomus catostomus, C. commersoni*) and sturgeon (*Acipenser fluvescens*) were important components of their diet. Webequie was stated to have been established on the site of a traditional fishing camp. There are no estimates of the subsistence harvest by the community or any commentary on the current state and prospects for commercial and sport fisheries. This study concentrates on the subsistence fishery, since the other fisheries were of minor importance in 1987-88. It also discusses some of the problems the community is facing in regard to its fisheries.

MATERIALS AND METHODS

Webequie (53°59′N, 87°23′W) is located about 520 km north of Thunder Bay, Ontario, on Eastwood Island, Winisk Lake (Fig. 1). The Winisk River flows through the lake and empties into Hudson Bay. The community consists of approximately 535 Ojibwa Indians and about 12 non-native teachers, nurses and the Hudson Bay Store manager. The Indians are engaged in a subsistence-based economy in the surrounding Hudson Bay lowlands, hunting and trapping along the northern margin of the boreal forest and fishing in the larger lakes

©The Arctic Institute of North America

and rivers. In the last 20 years the settlement has undergone considerable change and it now has many of the facilities found in the South, including an airport, school, nursing station, community centre and council offices.

Study of the subsistence fishery was encouraged by the Band Council following an investigation of the sports fishery in 1987 by Henschel (1989). We were assisted by a community advisor, an experienced fisherman who was known and respected in the community. A combination of recall survey, catch diary and direct observation was used. Field work and interviews were conducted between 16 June and 18 August 1988. The community advisor served as translator, participated in interviews as required and liaised with the Band Council. The Council advised us that the inclusion of all adult males (> 18 years) would account for the community's fish harvest. Any contribution by females and younger persons would be reported in the adult male total. To launch the project, daily broadcasts were made over the local radio station for a week. These described the study, raised interest and encouraged participation.

Ideally, all potential subsistence fishermen should be included in any investigation to avoid bias in the data, but results of previous harvest studies showed this to be impractical. Therefore, following discussions with the community advisor, a stratified sampling procedure was adopted based on the level of fishing activity. Fishermen were divided into four groups labelled high, medium, low and no fishing. The high group contained those who fished throughout the year, whenever conditions allowed, using predominantly fixed gill nets. The medium group also used gill nets but concentrated their fishing effort in the open water season and were less active at other times. The low group fished only in open water, mainly with rod and reel on weekends; the remainder did not fish. We spent more time collecting data from the high group because it was assumed they harvested the bulk of the community's catch (Rogers, 1962; Berkes, 1979; JBNQNHRC, 1982; Gamble, 1984; Boivin, 1987; Andrews, 1988).

A recall survey was used to estimate the community's catch for a one-year period. Ninety (67.7%) of 133 potential fishermen were interviewed. Questions were designed to establish the types and amounts of fishing equipment available, where

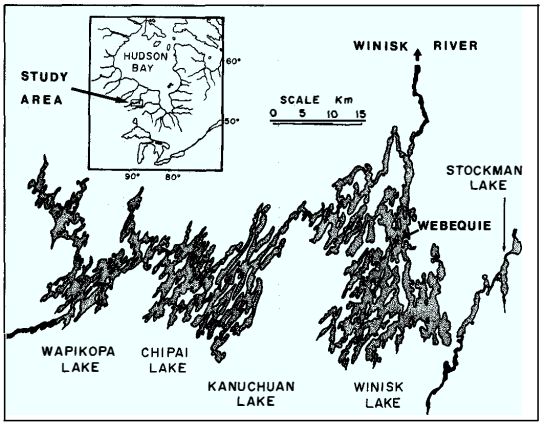

FIG. 1. Map showing the location of Webequie and the lakes generally used for subsistence and commercial fishing.

and when it was used and the species and quantities of fish captured. The initial interviews ranged from 5 to 75 min (average 20 min); subsequent interviews were shorter. The duration depended on whether translation was needed, how interested the participants were in elaborating on the questions, whether they volunteered additional information and how much time they had available. Most interviews (86%) were in the individuals' homes and the rest at mutually convenient locations. About 60% were conducted in English; the remainder were in Ojibwa and translated. The majority of the 43 individuals not interviewed were unavailable due to temporary employment (mostly firefighting) away from the community; only one refused to be interviewed. These fishermen were assigned to groups on the basis of the community advisor's knowledge of their fishing activity. It was considered more accurate to do this than to assign them to groups in the same proportions as those fishermen who were interviewed. This is partly because they tended to be younger men, with fewer dependents, who were still establishing themselves as fishermen.

The longest recall periods were 8-9 months, depending on the date of the first interview. Subsequent interviews were shorter and planned on a weekly basis to update catch and effort records and encourage participants to complete their catch diaries. All information was given on a voluntary basis and no authority or forms of remuneration were used. Care was taken to avoid excessive burden on respondents (Tobias, 1987). Questions were committed to memory and answers were recorded on blank paper rather than on official-looking forms. Respondents were encouraged to recall fish harvests by species in measures with which they felt most comfortable. Individuals uncertain about a response (e.g., 25-30 walleye) were advised to choose the lower value. This ensures that the survey findings are conservative (Tobias, 1987). Double counting can be a major problem if attempts are not made to minimize this error (Usher *et al.*, 1985). Therefore, specific instructions were given prior to an interview to avoid this. Fishermen were asked only to report catches from nets under their direct and constant care (Tobias, 1987). They were not to report any fish they took home when helping with another individual's net. The reliability of recalled information was checked by comparing recalled data with catch diary records and by comparing partners' recall of their companions' catches with companions' recalled catches.

The interview process provided records of the subsistence harvest from October 1987 to July 1988. For August and September 1988, catch diaries were intended to complete the records for the annual cycle. Unfortunately diaries were not returned. According to the community advisor, this was due to complexity of the diary, forgetfulness and declining interest in the study. Catches for these months were, therefore, estimated by the community advisor and checked against information provided during interviews on the usual fishing activity and success during this period. Fishing effort and catches were taken to be the same in August as in July but decreased in September because of migratory waterfowl hunting. Thus, September catches were estimated to be 80% of those of August. The weight of the harvest was estimated by converting numbers to weights of fish using the average round weights of each species obtained from field measurements. Observing fishing trips in the field allowed us to verify information provided in diaries and at interviews. Ten gill-net sets and nine angling trips were witnessed. At each gill-net fishing

site, net length, mesh size and the way the net was fished were recorded. The numbers and species of fish caught were noted (including any discarded) and fork lengths (± 0.5 cm) and round weights (± 25 g) measured. Similar information was collected on angling trips. Nine sturgeon fishing trips took place from the community while we were there; records of these were obtained from interviews.

No commercial fishing took place during the eight-week study period and only three individuals fished for a week after our departure. Catch records for 1970-90 were supplied by the Ontario Ministry of Natural Resources in Geraldton. Literature and comments made during the recall interviews provided some details about the decline in commercial fishing and also about problems associated with the sport fishery.

Calculation of the mean numbers and weights of fish caught by fishermen in the different activity groups was based on numbers reported caught in each month from October 1987 to July 1988. It was assumed these numbers were accurate. For calculation of the community ten-month totals, stratified finite population sample means and variances were calculated (Barnett, 1974) and confidence limits estimated as twice the standard deviation of the stratified finite population mean. This will provide approximate upper bounds on the true 95% confidence intervals and is required because no general rule for determining the appropriate number of degrees of freedom in stratified sampling problems exists.

RESULTS AND DISCUSSION

Fishing Gear and Harvest Cycle

Fishing methods of the Ojibwa and Cree Indians are similar (Rogers, 1962, 1973; Winterhalder, 1977; Berkes, 1979) and were confirmed in interviews with experienced Webequie fishermen. We observed two methods in use, fixed bottom set gill-netting and angling. Multifilament nylon gill nets caught most of the fish harvested. Except for sturgeon fishing, mesh sizes were 102, 114 and 127 mm stretched measure (4, 4.5 and 5 inch), of which 87% were 114 mm. The nets were 26.8 ± 3 m (88 ± 10 ft) long and 0.9 m (3 ft) deep and several were often attached together. Sturgeon nets were 229 mm mesh and made of stronger twine. Materials to make nets are normally purchased through the Band Council at a 1987 price of $60 per 100 ft of 4.5 or 5 inch mesh webbing and $0.75 per lead or float. During the ice-free season nets are checked daily, usually in the morning, because most fish are caught at night. In late July and early August, when water temperatures reached a seasonal high of about 20°C, nets were checked twice a day to prevent fish spoilage (especially lake whitefish). In winter, nets are checked only once or twice a week.

Angling has become popular in the last 20 years and provides some harvest. It is the preferred method of young males and is used through the ice-free season. Artificial lures (spoons and plastic jigs) are used to catch walleye, northern pike and brook trout (*Salvelinus fontinalis*). The rod and reel are usually bought at the Hudson Bay Store, where prices ranged from $75 to $200 in 1987.

Several elders from the community mentioned the use of fish traps in the past but none has been constructed or used for many years.

Fish catches fluctuate over the year (Fig. 2), with about 52% of the harvest taken through the ice in winter. Peak catches occur in October, when trapping begins; at least 50 men were involved in 1987-88. Gill nets are set for trap bait and several trappers mentioned they ate more fish than normal while on their trap lines. Freeze-up occurred in the last week of October and for about 10 days nets could not be set. In anticipation of this, fishing effort was increased to obtain enough fish to last until the ice was secure. This was also noted among the Round Lake Ojibwa by Rogers (1962). These factors and, perhaps, fall movements and congregations of spawning lake whitefish (Scott and Crossman, 1973) contributed to the large October harvest.

Nets were set under the ice as soon as it was thick enough, and catches were high in November. The fishermen were replenishing depleted fish supplies and trapping was still occurring. December brought the trappers back to the community for Christmas. During the festive season, fishing was reduced and the harvest was smaller. Catches continued to fall through January and February, when winter storms and bitterly cold weather caused all but the most dedicated fishermen to abandon the activity.

March brought a sharp increase in the fish harvest. Spring spawning fish, such as suckers, walleye and northern pike, become more active as they congregate and move to the shallow margins of lakes and rivers where the nets are set (Winterhalder, 1977). Canada geese arrive in April and participation in the spring hunt has religious significance to the natives of the Ontario Hudson Bay Lowlands (Prevett *et al.*, 1983). The combination of goose hunting and ice break-up at the end of April was responsible for the lowest catches of the year. By mid-May, open water fishing was again possible and fish catches increased. The warmer weather of June encouraged anglers and gill-net fishermen to fish and the harvest continued to increase. During late June and early July, very

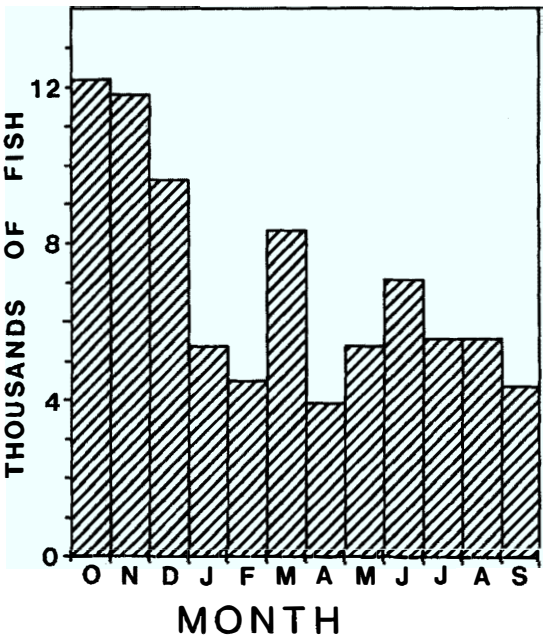

FIG. 2. Numbers of all species of fish harvested in the Webequie subsistence fishery, October 1987 to September 1988.

dry weather contributed to an outbreak of forest fires and many of the men were occupied fighting fires. Seasonal employment also peaks during summer. These factors were responsible for the moderate July and August fish harvest. Several older fishermen mentioned that summer had been the time of greatest harvest in the past. In the fall, many fishermen hunt geese and waterfowl, which conflicts with fishing. Participation in this hunt is less than the spring hunt (Prevett *et al.*, 1983) and fish harvests do not decline as much.

Fishing Locations

The distances travelled to fish varied according to whether the fishermen returned to Webequie to sleep or camped overnight and whether gill nets were used or if it was an angling trip. All gill-net fishing recorded between 18 June and 18 August that did not involve overnight camping was within 15 km of Webequie and was confined to Winisk Lake (36 locations). Twenty-seven of 33 locations in which overnight camps were used for gill-net fishing were beyond 15 km from the community. Usually fishermen took their families and camped for several days. Fishermen using rod and reel would travel farther to fish, up to 25 km on day trips, often to locations along the river. They would usually camp overnight (4 out of 5 trips) if distances were beyond 25 km.

After the lakes have frozen, gill nets are moved closer to the community. All locations mentioned during interviews were within 10 km. An exception to this is when nets are set from overnight cabins by Indians tending trap lines. These are spread over a wide area and some were up to 60 km distant.

Cost of Fishing

An investment of capital is required for an individual to fish in northern Ontario and income often dictates the amount of fishing that can be done.

The canoe and snowmobile are the major forms of transportation and a large portion of a fisherman's income is needed to acquire them. Canoes cost an average of $2800, while a typical 15 HP outboard motor costs $2500. Approximately 86% (n = 70) of the individuals interviewed owned at least one canoe and motor. The average period of use for one of these boats and motors is 4-5 years. Snowmobile prices are higher, depending on the type of machine. No data were obtained on the number of operable snowmobiles per individual, but most households had at least one near their house. Their period of use is estimated at 5 years. It is difficult to prorate annual depreciation costs of a canoe or snowmobile for fishing because they are used for many purposes (general travel, hunting, fishing, trapping).

Gasoline costs $1.10 per litre ($5.00 per gallon), and each five-gallon tank requires 500 ml of oil ($2.50 each). The average distance for a day trip using gill nets was 11 km (n = 36). This distance would be travelled in approximately 30 min; several individuals reported that a 15 HP motor uses a gallon of fuel an hour. Thus the fuel cost of a daily round trip would be $5.50. The average distance travelled for a day trip of angling was 13 km, approximately a 40 min canoe ride at a cost of $7.30.

A typical list of equipment taken on an overnight fishing trip during the summer includes: gasoline, oil, various tools for repairing equipment, spare motor parts, life jackets, paddles, rope, gill nets, rod and reel, rifle, ammunition, axe, cooking utensils, Coleman lantern, naphtha gas, tent, tarpaulin, sleeping bag and extra clothing. If this equipment were purchased at one time, initial cost would be high. However, most items are acquired and replaced over time, so that annual investment is reduced to a few hundred dollars.

Only two purchases of groceries and miscellaneous supplies for an overnight fishing trip were observed. These averaged $50, but from such a sample it is difficult to get a good indication of typical cost.

Lake sturgeon fishing is regarded as a special activity by the Webequie fishermen because if enough are caught there is the chance to sell the catch commercially and also because sturgeon are considered one of the best fish to eat. Nine trips in 1987 lasted 2-5 days and involved distances of 27-125 km (average 45 km). Fuel costs averaged $55; food and supplies added $100-150 to expenditures. A float plane was rented on three of the trips at a cost of $1.75 per mile and an average cost of $186 per flight. Sturgeon sold for $7.06 per pound in 1987, and that year two men earned $2500 from the catch of one trip.

Observed Catches and Disposition

Lake whitefish, walleye, northern pike, longnose sucker, common white sucker, burbot, cisco, and lake sturgeon were caught in gill nets by native fishermen. Walleye, northern pike and brook trout were caught by angling, the latter species only in the fast water and rapids of the Winisk and neighbouring rivers.

The average catch in ten summer gill-net sets was 27.6 (± 6.0 S.E.) fish; seven species, including two sucker species (longnosed and common white), were recorded (Table 1). The catch per net was quite variable, so the standard error was large. All lake whitefish and walleye were kept for consumption; eight (36%) of the northern pike were left ashore. Several individuals indicated that only northern pike > 60 cm were eaten. Most suckers (76%) were also placed ashore. These results are typical of summer catches in Winisk Lake. According to interviews, there is considerable variation with the time of year and among locations in catch rates and species composition but not in consumption patterns.

All lake sturgeon fishing was done some distance from the community. Sturgeon were caught on six of nine trips. The average catch was three per trip. The fishermen indicated that 1988 had been a bad year for sturgeon fishing but no explanation was offered.

Angling supplied all of the brook trout, 18% of the walleye and 5% of the northern pike caught and provided about 5% of the fish harvested. Nine angling trips were observed. The aver-

TABLE 1. Numbers and percentage of different species in ten gill-net catches from Winisk Lake, July-August 1988

Species	Number	Range	Percentage
Lake whitefish	175	0-55	63

Burbot	3	0-3	1
Cisco	2	0-2	1
Totals	276	5-63	100

age catch and keep was nine walleye; all northern pike were released. Two trips to specific locations downriver yielded an average of three brook trout. Most brook trout are caught while guiding when expenses are paid by tourists.

Use of Catch

Fishermen selected from their gill-net catches fish for consumption. Species preferred for eating were lake whitefish and walleye. The relativelty high fat content of lake whitefish may explain its popularity (Winterhalder, 1977). Suckers (both longnose and common white suckers) and northern pike were eaten to a limited extent. Neither burbot (*Lota lota*) nor cisco (*Coregonus artedii*) were eaten. Lake sturgeon and brook trout were rarely caught in regular gill-net catches but were considered a delicacy. Fish brought back to the community were shared primarily with family members and residents who could not afford to fish, were old or were in poor health. Excess fish were frozen whole, smoked and/or dried. Except for sturgeon, fish were not sold in the community.

Most of the catch is used for human consumption (the last sled dog team was killed by wolves in 1984). Only a small proportion is fed to family pets. Trapping is an important source of income for many men in the community. Suckers and other species not eaten are used for trap bait during the trapping season and in summer are left ashore to attract fur-bearing animals for later trapping. In the Northwest Territories, Corkum and McCart (1981) found that 73-78% of the domestic fish harvest was consumed even though there was considerable reliance on sled dogs.

Estimated Community Subsistence Harvest

The 90 fishermen interviewed were placed into groups on the basis of their level of fishing activity (Table 2). The 43 fishermen not interviewed were assigned to groups by the community advisor. The mean numbers of fish caught by each group were quite different, corresponding with the differences in fishing effort. Catches by the 90 interviewed fishermen for the ten months to the end of July 1988 (Fig. 3) show that in this period the high group caught >2000 fish, the low group <1000 fish. Ninety-five percent of the catch was taken in gill nets. The numbers and weights of fish harvested in this period by fishermen included in the survey and estimates for the community are given in Table 2. Fishermen in the high activity group caught 49% by weight of the catch, the medium group caught 26% and the low group 25%.

The annual harvest of each species by number and weight is given in Table 3. Almost 95% of the catch was composed of suckers, northern pike, lake whitefish and walleye in decreasing order by weight of catch. Brook trout and lake sturgeon contributed little to the totals, although they are valued by the community.

The total harvest is not a valid estimate of fish used for human consumption. Of this total, no burbot or cisco were kept and, based on observed summer gill-net catches and observations and interviews in the community, only about 60% of the northern pike and 25% of the suckers were eaten. When these are subtracted, 54 860 fish, weighing 66 180 kg, were available for consumption during the year. This represents 103 fish (124 kg) per person. An estimated 5% of this

fish was used for pet food and trap bait. To convert round fish weight into edible food portions, the conversions used were: lake whitefish, 67%; walleye, 71%; northern pike, 60%; suckers, 65%; brook trout, 60%; and lake sturgeon, 65% (JBNQNHRC, 1982). The harvest provided an estimated 77 kg per year (0.21 kg per day) edible fish per person.

Reliability and Accuracy

Native people rely on oral transmission of their culture, which places great emphasis on accurate recall (Arima, 1976; Usher and Wenzel, 1987). The recall of fish (and small game) has been found to be less accurate than for rare or large game animals. This is because harvesters do not usually count their fish and thus they have no number to remember (Berkes, 1983; Usher and Wenzel, 1987).

Several methods were used to check the reliability of the recalled information. Four partially completed catch diaries distributed in December 1987 were compared with recalled data from interviews in June-July 1988. Recalled data were within 20% of recorded data and all underestimated it. During interviews, the names of individuals who accompanied fishermen were obtained. Fishermen would often comment on their partners' catch. At a later date, partners were interviewed and asked to recall their companions' catch. This was done on 12 occasions. In four cases, agreement was exact; the maximum discrepancy in the rest was 12%. These comparisons suggest that our recall data is quite reliable. Since interviews were designed to give minimum totals where there was doubt and fishermen showed no tendency to exaggerate, any bias in the harvest estimate would tend to make it low.

Commercial and Sport Fisheries

No commercial fishing occurred between 16 June and 18 August 1988 and very little occurred during 1988. This conforms with the generally depressed state of northern Ontario native-run commercial fisheries in recent years. Commercial records for Webequie (Table 4) provided by the Ontario Ministry of Natural Resources (OMNR) for the period 1970-90 showed catches had fallen to nil in 1989 and 1990. Fishing usually takes place on Winisk, Stockman, Kanuchuan, Chipai and Wapikopa lakes (Fig. 1). Licenses and quotas are assigned by species by the OMNR. These are distributed to the fishermen by the Band Council but, in recent years, quotas have been large enough not to restrict fishing initiative. Catches must be flown to Pickle Lake, where they are processed and sold through the Freshwater Fish Marketing Corporation in Winnipeg.

A tourist fishing and hunting operation called Winisk River Wilderness Camps is operated by a number of individuals in the Webequie community. Camps are located on the Winisk and its tributaries and offer trophy brook trout as well as walleye and northern pike fishing. In the fall, the camps are used for hunting geese and moose.

The camps were very successful in the 1970s but since then have not done so well. The Indians attribute this to a decline in the brook trout fishery. When operating at their peak, the camps employed as many as 15 individuals, mainly as guides. Many former guides stated that until the last 2-3 years they were able to make a good income during the season. In 1988, the Winisk River Wilderness Camps joined the newly formed Native Tourist Organization in Ontario. Through this organization, the community is hoping to expand its advertising and attract more tourists. This should alleviate one factor that may have contributed to the camps' poor performance.

TABLE 3. Annual Webequie community harvest by kind of fish, October 1987 – September 1988[1]

Fish	Number harvested	Mean weight (g)	Total weight (g)	Percentage by number	Percentage by weight
Lake whitefish	22 470	1140	25 530	27	24

CONCLUSIONS

Our results have provided what we believe to be a conservative estimate of the annual harvest of fish by the inhabitants of Webequie. Like other traditional communities, Webequie is quite dependent on its subsistence fishery. This was expected, since fishing has always been a basic subsistence practice for most native groups in northern Canada and often prevented starvation when other wild resources were not available (Power, 1979; Berkes, 1990). Alton Mackey and Orr (1987) found that fish provided 30% of the country food of the Inuit of Makkovik, Labrador. The bush diet of the Cree of Pinehouse, Saskatchewan, was 41.2% fish (Tobias, 1987). Other studies in Canada have found fish to account for from 25 to 53% of the diet (Rogers, 1963; Balikci, 1980; JBNQNHRC, 1982). A

variety of animals are eaten by the people of Webequie; geese, ducks, moose, hare, partridge and fish are common foods.

Our results were not designed to estimate the proportion of fish in the diet. The per capita annual weight of 77 kg is relatively high, considering the Canadian average of 117 kg per capita for fish, meat and poultry combined (Usher, 1987). It is much higher than the U.S. per capita consumption of all fishery products, which was estimated at 7.9 kg in 1989 (O'Bannon, 1990). It is similar to those native Alaskan communities with the highest per capita catches where fishing tends to be concentrated on the summer and fall migrations of anadromous species (Craig, 1989), although there are no high-yielding anadromous stocks available to the Ojibwa of Webequie.

Berkes (1983) has converted the harvest values for a number of studies into kg round weight per person to facilitate comparisons. Round weights have the advantage for comparisons of not being subject to various conversion factors used to estimate edible weights. Webequie's value of 124 kg fish per capita (as well as 78 kg per capita used for other purposes) falls in the upper range of estimates for other northern Canadian groups (Berkes, 1990). However, it should be emphasized that this estimate is for one annual cycle and catches may vary considerably from year to year. Our interview results indicated that, although the harvest cycle is similar each year, the weather and the availability of other game can affect the harvest, as can employment opportunities (Berkes, 1990).

A few fishermen were responsible for supplying the community with fish. Twelve individuals in the high fishing activity group accounted for almost half the community total, while those in the high and medium groups (24 fishermen) harvested 75% of the year's catch. Much of this catch was distributed throughout the community to kin and others unable to fish. This was also found by Berkes (1979) and Boivin (1987) and appears to be characteristic of native subsistence fisheries.

The estimated community catch, about 84 000 fish, average weight 1.3 kg, is of considerable magnitude. It is taken from waters that can be expected to yield only about 2.3 $kg \cdot ha^{-1} \cdot y^{-1}$ (Ryder, 1965). This implies the harvest represents the yield from about 500 km^2. This area of water is accessible within about 25 km radius of the community. It is also exploited, especially on overnight trips in summer, when most fishing occurs more than 15 km from the village. A need to distribute the fishing over such a wide area emphasizes the requirement for cheap fuel to support the current subsistence practices.

Analysis of a James Bay Cree fishery revealed that the present population used less than 10% of available fish production (Berkes, 1979). A change that occurs when previously nomadic hunters move into permanent settlements is that there is a sharp increase in population. A consequence of this is likely to be increased fishing pressure on local stocks. In the mid-1970s, Berkes (1979) noted that overfishing of whitefish occurred in the area surrounding Fort George, Quebec. Given the current doubling rate of approximately 25 years for native populations, it is questionable how long the northern fish stocks can be maintained (Usher, 1987). Outboard powered boats and snowmobiles increase the area available for hunting and fishing, which compensates to some extent for the negative effect of living in permanent settlements (Berkes, 1979). This is only possible if the community can meet the expenditures.

Webequie fishermen complain about the high price of fuel and feel it limits the distance they travel. However, most choose to make frequent short day trips. Berkes (1982) found that the most favourable energy input:output ratio was when fishermen established field camps rather than relying on day trips from the settlement. But this conflicts with family interests, children's schooling and access to medical and other facilities. The health of the subsistence fishery is closely linked to the cost. If fuel and equipment prices rise faster than incomes, the subsistence fishery may not be economically feasible, and this could affect the quality of the native diet.

Many southerners and non-natives have underestimated the economic significance of subsistence fishing to the natives and too quickly assumed that it was declining as a means of livelihood. The high price of store-bought food in the community emphasizes the value of the subsistence economy. Nowak (1977) calculated that local food could account for one-quarter of the total real income of a family. The subsistence harvest is also important for the physical and social well-being of families. A number of intangible and unquantifiable factors, such as taste preferences, traditional food preparation and eating practices, the esteem by which a successful hunter is held in a native community and simple satisfaction of being in control of one's means of livelihood, combine to make any dollar estimate of the value of the native renewable resource harvest totally inadequate from the native's perspective (Resource Management Consultants Ltd., 1980).

By contrast, the future of the commercial fishery does not look very promising. The development of this fishery from its introduction in the 1930s to becoming an economic mainstay of many communities in the 1950-70 period is outlined by Rogers (1972). In 1977-78, the mean commercial harvest for all commercial fisheries operating in the jurisdiction of the Freshwater Fish Marketing Corporation (Manitoba and northwestern Ontario) was only 2500 kg, with a mean value of $2063 (Thompson, 1981). The Department of Northern and Indian Affairs subsidized commercial fisheries in the northern communities in the past, but not in recent years (Anderson, 1985), resulting in a decline. Subsidies cannot be justified on economic development grounds because the fisheries have no potential to be self-sufficient in the foreseeable future (Thompson, 1981). Since fisheries' subsidies are merely forms of welfare, it may be desirable to increase social benefits while developing local markets in northern communities (Riewe *et al.*, 1983). Whatever happens, the potential conflict between commercial and subsistence fishery harvest must be considered. Any promotion of commercial activity where subsistence fisheries occur must be fully justified and fish stocks protected from over-harvest.

Sport fishing may be an alternative to commercial fishing as a source of income. The Winisk River Wilderness Camps, opened in 1967, have never been seen as an opportunity to provide appropriate employment to Indian people. Many of the natives are looking for jobs that permit them to stay on the reserve. The sport fishery allows them to maintain traditional lifestyles and resist pressures to move to the cities (Anderson, 1985). Since Webequie is located in ideal fishing country, there is potential for development of the sport fishery, but it must be managed carefully. Recent membership in the Native Tourist Organization of Ontario should help reactivate interest in the camps.

In the North, the problem of allocation of fishery resources can be acute. Commercial, sports and subsistence users may all be competing for the same stocks in an area where productivity is basically low. Many natives feel the subsistence fishery will lose to other interests; conversely, non-natives are concerned about the impact of native fishing on northern fish stocks. In the boreal region as a whole, the importance of subsistence and sport fisheries harvest is much greater than that of commercial fisheries (Riewe *et al.*, 1983). For fisheries managers to develop policies that are socially acceptable, practical and equitable to all users, they must have accurate information. Reliable and accurate subsistence data may be the most difficult to obtain, yet they are an integral part of the information required. Fish and wildlife are still, for the most part, abundant in the North and must continue to support the native economy as well as provide for the use and enjoyment of others (Usher, 1987).

ACKNOWLEDGEMENTS

We thank the people of Webequie for their friendly and generous participation in this study and for sharing their knowledge of fish and fishing. Special thanks go to Mathias Suganaqueb, Peter Jacob, Sammy Jacob, Fred Jacob and Johnny Neshinopaise. Tina Spanjers, John Henschel, T. Tobias and Ron Zondervan are thanked for providing advice, assistance and encouragement when needed. We thank the referees for their constructive comments, which helped to improve an earlier version of this manuscript. The study was made possible by a Northern Studies Grant awarded through the Association of Canadian Universities for Northern Studies to Mark P. Hopper and a grant from the Ontario Ministry of Natural Resources, Geralton.

March 18, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on Indigenous Knowledge. This upcoming week's session is: **WSR Presents: Indigenous Knowledge - Part 3.** The Project Team has planned an Indigenous Knowledge series, this upcoming week being the third part in the series.

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **March 23rd, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1- 844-424 -0500**.** You can also email your questions to brianna.patrick@indigenousknowledge.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

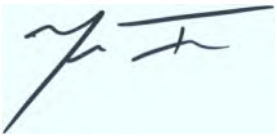
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

May 2, 2022

Dear Chief Moonias,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps.

We will be offering a community information session, via Zoom, on **Monday, May 16 between 12pm and 1:30pm** for Neskantaga First Nation, where there will be a presentation on the WSR Project activities. We anticipate the community information session to be approximately 1.5 hours in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://maverickav.zoom.us/meeting/register/tZIucu2pqT8iHdFvWkupECVBXVBIMyUPHeGF.

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: Meeting ID: 863 5417 4875 & Passcode: 037791

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: https://www.supplyroad.ca/neskantaga.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

All-Season Community Road Study

1 Introduction and Background

1.1 History of the study

On August 31, 2011, the four First Nations, including Eabametoong, Webequie, Neskantaga and Nibinamik signed the East West Collaborative Agreement that formalized their collective interest in looking at options for a community service road. As part of this agreement, a First Nations Study Group was assembled, with one representative being appointed from each of the four communities.

Formal scoping of this study took place on July 3, 2014 in Thunder Bay via a meeting of the East West Study Group. Over the course of the remainder of 2014, the draft study scope and budget were finalized, then submitted to FedNOR and MNDM for review. On March 1, 2015, at the Prospectors and Developers Association of Canada (PDAC) convention in Toronto, approval of the project was announced, with the Government of Canada and the Province of Ontario each investing $393,814 to complete the regional community service corridor study.

Now that the study had been approved and formalized, the East West Study Group met on March 23, 2015 to prepare a formal Request for Proposals (RFP) for hiring a consultant to conduct the technical aspects of the study. The RFP was written, and the budget structured to accommodate the inclusion of Marten Falls First Nation should they choose to join the study. They had previously chosen note to participate in this study. The RFP was issued, with 18 firms expressing interest and 10 firms actually submitting proposals. The Study Group met again on July 10, 2015 to review submitted proposals and select a consultant to undertake the work. SNC-Lavalin Inc. was selected to execute the technical portion of the project. On July 23, 2015, the project kick-off meeting took place between the Study Team and the selected consultant.

Although the opportunity to join the four First Nations of Webequie, Neskantaga, Nibinamik and Eabametoong in the study, remained available through the structure of the RFP as previously mentioned, they remained consistent with their original decision not to join the study.

1.2 Study Context – Ring of Fire and Community Infrastructure

The four First Nations involved in the study are all members of the Matawa Tribal Council, which consists of nine First Nations, including Webequie, Eabametoong, Neskantaga, Nibinamik, Constance Lake, Marten Falls, Ginoogaming, Aroland, and Long Lake 58 First Nations. The Matawa member First Nations are currently working with the Province of Ontario on what is called the Regional Framework Agreement. This agreement outlines how the Matawa First Nations and the Province will cooperate on the Framework's four pillars of: resource revenue sharing, long-term environmental monitoring, infrastructure planning and social and economic development (see figure 1-1 below).

Figure 1-1: The Four Pillars of the Community Driven Regional Framework *(Source: Eabametoong First Nation)*

For the Matawa First Nations, the intent of the Regional Framework initiative is to:

- Assist its members in making informed decisions about potential developments in their traditional territories;
- Provide assistance to community planning initiatives as well as joint priorities;
- Ensure that First Nations are intimately involved in decision-making regarding any development activities that may take place in their traditional territories.

The all-season community road study sits firmly under the infrastructure pillar of the Regional Framework, together with other key infrastructure components:

- Power (including hydro, solar and wind)
- Broadband
- Water infrastructure (drinking and waste water/sewage)
- Housing

1.3 Study Scope/Mandate

This study was funded with the assistance of funding contributed by the provincial and federal governments on an equal share basis. The program was administered on behalf of the four

participating First Nations, by Webequie First Nation. Each community appointed a Technical Coordinator to liaise between the consultant study team, community leaders and community members. The Technical Coordinators were a vital part of the study process. They provided information, organized meetings, received input from community members, received guidance from community elders, and received direction from community leaders.

1.3.1 Purpose of the Study

This study consisted of three main activities working in parallel: (1) engaging and informing the communities to help them decide whether they wish to continue with further planning of an all-season community road; (2) helping to identify potential corridors for an all-season road should the communities wish to continue the all-season community road planning process and (3) assessing the business case for an all-season road (does it make economic sense?).

At the conclusion of the study, the goal was to get a clear indication from the communities as to where to proceed with regard to the development of an all-season community road- either the process is abandoned, or the planning process continues to progress to next phase of study.

1.3.1.1 Three Questions

1.3.1.1.1 Question 1 -- Should There be An All-Season Road?

The study team engaged community members via three visits to each community over three rounds of community engagement as the study progressed in order to understand opportunities and concerns regarding a possible all-season community road. While this will be discussed in more detail in Section 3 *Community Engagement,* the study team used a variety of efforts to ensure awareness of the project by community members:

- Engagement of community members by targeting specific age groups to encourage freer discussions where members may not be as hesitant to speak, as they might be in larger groups.
- Provision of support in the form of technical information (i.e., community newsletters, community engagement reports) to ensure community members have the information they need to make a thoughtful decision that weighs both the pros and cons of an all-season community road.
- Researching previous cases of all-season road connections to remote communities to ensure community members understand and get access to information on both the good and bad aspects of a potential all-season road.
- Use of a variety of techniques to encourage participation at community meetings, such as opportunities for community members to write their comments/questions instead of voicing them.
- Distribution of project information via various channels (i.e., project website, Facebook page), community newsletters, project presentations on local community radio stations.

1.3.1.1.1.1 Building Community Consensus

The project team members and local project Technical Coordinators encouraged community members to continue discussions after the project team would visit each community. It was emphasized that the decision to proceed with an all-season road was one that requires significant thought involving the weighing of many potential benefits and concerns. During project team visits to the schools, students were also encouraged to discuss the all-season road with their parents and other family members. Community Technical Coordinators were also provided with tools and resources such as additional mapping materials, handouts and custom presentations to help them continue the conversation.

1.3.1.1.1.2 Building Consensus as Four Communities Working Together

After each round of community engagement, the project team produced a newsletter that summarized what was said in the communities and provided additional information via a section on frequently asked questions, where questions that were asked or were anticipated by the project team were answered. A detailed report of each round of community engagement was produced and distributed to each community. The overall intent was to provide all communities with the same information. The project team's round three presentation summarized issues raised by all communities in rounds 1 and 2 and identified: (1) in which community the issue was raised and whether the issue was raised frequently or not frequently. Meeting minutes were recorded by the project team for every meeting that took place during each round of community engagement.

1.3.1.1.2 Question 2 -- Where Should the All-Season Road be Built?

Where the road should be built is typically determined by a number of factors:

- Distance to communities/major centres
- Terrain type (i.e., esker, muskeg)
- Number and width of water crossings
- Environmentally sensitive features (i.e., spawning areas, caribou habitat)
- Traditional knowledge areas (i.e., burial sites, hunting/fishing areas, camps)
- Connection(s) to highways and other First Nation communities (for future connections)

Community members were given mapping materials through all 3 rounds of engagement and asked to provide additional information and to give input and opinions on the suitability of the road options presented, as well as to suggest any other options to be considered.

1.3.1.1.3 Question 3 -- Is there a business case for the All-Season Road?

While not exclusively a business decision, part of a pre-feasibility type of assessment such as this study requires examining, at a high level, whether or not there is a business case for the road. The business case is comprised of a number of components, including:

- Capital cost of road construction
- Road maintenances costs
- Comparison with the cost of maintaining/operating the existing winter road system
- Comparison of freight costs before/after construction of an all-season road
- Impacts of changes in remote status on Ontario Works benefits and community transfer payments

Community members were very interested to learn about and discuss the economic pros and cons of an all-season road, especially as to how the economics of the road might affect their family's quality of life and standard of living.

1.3.2 Specific Scope of ASCRS

1.3.2.1 Pre-Feasibility

The scope of the study is considered to be a pre-feasibility study (see Figure 1-2).

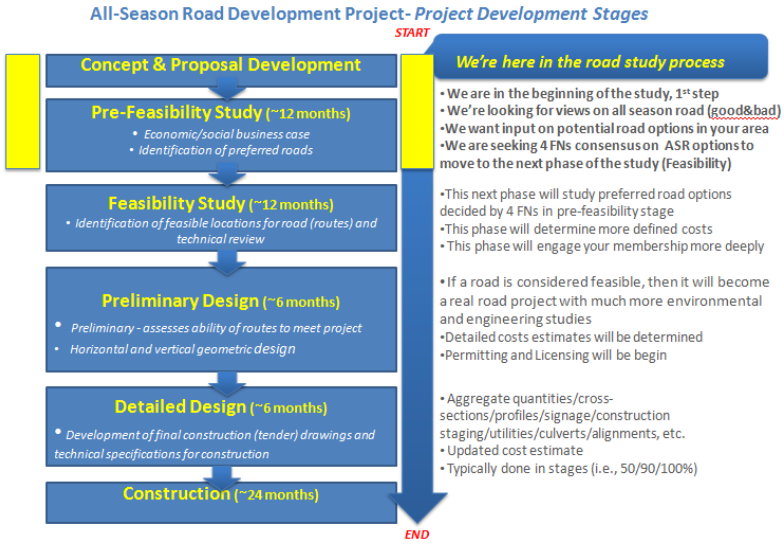

Figure 1-2: Typical project development stages

If the communities were to agree to continue with the planning process for an all-season road, a preferred corridor would also have to be identified from the options presented. Finer positional

adjustments of the road corridor would be made during a feasibility study, taking into consideration factors such as:

- Ground-truthing of desktop information
- Geotechnical consideration for bridge abutments and road
- Construction- sources of aggregate
- Traditional knowledge areas
- Baseline aquatic and terrestrial field data collection

1.3.2.2 Not an Industrial Road

1.3.2.2.1 Community Service Road

This study has always been considered to be focused on an all-season community service road rather than an industrial road to connect to the Ring of Fire mineralized zone. Its intention was always to (1) link the four communities together; and (2) link the communities to the existing highway system. Figure 1-3 provides a press release from the federal government.

News Release Article from Government of Canada Gouvernement du Canada

Archived - Harper and Wynne Governments Invest in First Nations and Economic Development in Ring of Fire Region

March 1, 2015 — Toronto, Ontario

The Honourable Greg Rickford, Canada's Minister of Natural Resources and Minister for the Federal Economic Development Initiative for Northern Ontario (FedNor), and the Honourable Michael Gravelle, Ontario's Minister of Northern Development and Mines, today announced a joint investment of more than $785,000 to support economic development and community access in Northwestern Ontario.

The Ministers made the announcement at the 2015 Prospectors and Developers Association of Canada's International Convention in Toronto – one of the world's leading mineral exploration conference and trade show.

The Government of Canada and the Province of Ontario will each invest $393,814 to enable the Webequie First Nation, in partnership with the First Nations of Eabametoong, Neskantaga and Nibinamik, to complete a regional community service corridor study.

This investment is consistent with the federal and provincial governments' position that targeted investments can help advance community access in the Ring of Fire region.

The study will examine the benefits of developing an all-season transportation corridor connecting First Nation communities in the area with existing roadways, enabling them to capitalize on opportunities related to resource development in the region, including the Ring of Fire.

Figure 1-3: Press release from the Government of Canada regarding All-Season Community Road Study *(Source: Government of Canada website http://news.gc.ca/web/article-en.do?nid=941259)*

1.3.2.2.2 No Connection to the Proposed Eagles Nest Nickel Mine

The Terms of Reference for this study focused only on studying an all-season connection between the four communities and the existing provincial highway system. It did not reference a connection to Noront Resources' Eagles Nest mine, or any other proposed or existing industrial activity. While this may be a study that will be undertaken at some point, it was no part of the scope of work for the current study.

1.3.2.2.3 Provincial Industrial Road Study

The Province of Ontario, through its Infrastructure Ontario group, is currently undertaking a study to assess the feasibility of a potential connection between Noront's Eagles Nest Mine and the provincial highway system to the south. This study has no relationship to the current study.

1.3.2.3 Desk-Top versus Field Data

This all-season community road study is a pre-feasibility study and, as such, focuses on a high-level/desktop review and assessment of project data. No field data were collected in conducting the study. Field data collection will occur in subsequent phases of study should the communities choose to continue the all-season community road planning process.

As mentioned earlier in this section, examples of field data to be collected in the next phase of study could include:

- Ground-truthing of desktop information
- Geotechnical assessments for bridge abutments and roads
- Preliminary identification/mapping of traditional knowledge areas
- Baseline aquatic and terrestrial field data collection

Subsequent field data collection would occur as part of a feasibility study, where, for example, more detailed geotechnical information would be obtained to more precisely position the road within the identified corridor.

1.3.2.4 Initial Cost Estimates (i.e. Class "D" Estimates)

The cost estimates presented in this report are equivalent to government-defined Class "D" cost estimates. Class D cost estimates are based on conceptual, or sketch designs. They are typically order of magnitude cost summaries based on unit costs. In the case of this all-season road study, these estimates are based on construction costs per kilometre for the road and the number of water crossings of various span ranges (i.e., <5m, 5-30m, 30-60m and >60m). More information is provided in Appendix 6 - Engineering Technical Brief.

1.4 Study Funding

As discussed in Section 1.1 History of the Study, on March 1, 2016, the Federal and Provincial governments announced that they would each contribute $393,814 to the study. A portion of

these funds were directed toward community engagement, with another portion set aside for the technical component of the study that would focus on providing community members with the technical information necessary to decide : (1) whether to continue the process of planning an all-season community road; (2) which road corridor they prefer to connect their communities together and where that road corridor will connect to the provincial highway system; and (3) Is there a business case for an all-season road? Will an all-season road be economically sustainable?

1.5 Schedule

As mentioned previously, this study is a pre-feasibility study. There are a number of additional phases subsequent to pre-feasibility before construction, including feasibility, preliminary design, and detailed design. Typically the environmental assessment process is conducted in parallel with the engineering/feasibility and design stages.

1.5.1 ASCRS Schedule

1.5.1.1 When could Vehicles be on the Road

The question many community members asked was "*When could vehicles be on the road*?" Typically, the project development process in the absence of any substantial delays would take at least 3-5 years until the completion of construction. Phasing of the project could lessen this time, as portions of the road could be completed and opened to, for example, connect communities first so that they can begin using the road and appreciate its utility.

All-Season Community Road Study

2 The Regulatory Context

2.1 Environmental Assessment

2.1.1 Class EA versus Full EA

Overview

The Ontario *Environmental Assessment Act* provides two types of environmental assessments (EAs) in Ontario- individual EAs (also known as "full" EAs) and streamlined EAs. Class EAs sit within the category of streamlined EAs. Individual EAs are typically undertaken for more complex projects, usually of a larger scale. These projects would have the potential for causing significant environmental effects. Individual EAs require direct approval from Ontario's Ministry of the Environmental and Climate Change (MOECC). Class EAs differ from individual EAs in that they are typically undertaken for projects whose effects are more easily understood and thus can be effectively managed.

Table 1-1: Comparison of Ontario Individual and Class EA Processes *(Source: Ontario Ministry of the Environment and Climate Change website)*

Individual EA	Class EA
Step 1 *Develop and submit a Terms of Reference* • Submit Notice of Commencement to Director, Environmental Approvals Branch (Ministry of Environment and Climate Change, MOECC) • Submit a Terms of Reference summary form • Consult with the public, aboriginal communities and government agencies • Document consultation process and submit to MOECC with Terms of Reference • Prepare and submit Terms of Reference document- contents: o Proponent information o EA preparation methodology o Purpose of study/undertaking o Rationale and description for undertaking and alternatives to undertaking o Technical description of assessment and evaluation o Commitments and monitoring o EA consultation plan o Discussion of ability to adapt to different project circumstances o Identification of any other approvals required	*Proponents of Class EA projects follow a process that involves self-assessment and decision-making.* ***Provided a project falls under an approved Class EA process*** (i.e., Class EA for Minor Transmission Facilities), Class EA for Remedial Flood and Erosion Control Projects, etc.), proponents can then follow the streamlined EA process to plan the listed activities/projects as outlined in the approved Class EA document. Proponents may proceed directly with the project without review or approval by the Minister provided that the proponent has fully complied with the prescribed Class EA process under which they fall. In the event of outstanding environmental concerns and/or non-compliance with the prescribed Class EA, anyone may request that the Minister of Environment and Climate Change issue a Part II Order, which requires the proponent to complete and individual EA.

All-Season Community Road Study

Individual EA	Class EA
o After EA submission, proponent can request a "timeout" to make amendments to Terms of Reference MOECC Role • Consultation with public, Aboriginal communities and government agencies • Coordination of technical review of Terms of Reference document • Provision of recommendation to MOECC Minister as to approval/non-approval of Terms of Reference document (within 12 weeks of date of submission to Ministry) Mediation • Minister can request mediation regarding a matter prior to making a decision • Proponent can initiate the mediation process	***If the project does not fall under an existing, approved Class EA process,*** a Terms of Reference must be prepared and submitted to MOECC for review and a decision. This class EA document outlines proposed planning processes involved for the class of project submitted, including assessment potential environmental effects, assessment of alternatives and consultation with aboriginal, public and government agency groups. If the class EA document is approved by Minister and Cabinet, the proponent is then able to follow the approved, streamlined EA process to plan the listed activities.
Step 2 *Prepare an Environmental Assessment* Responsibilities of Proponent • Submit Notice of Commencement to Director, Environmental Approvals Branch • Upon approval of Terms of Reference, prepare EA document • Consult the public, aboriginal communities and government agencies Contents of EA document • Record of consultation • Monitoring framework pending approval of undertaking • Commitment list • Description of actions to mitigate, prevent and manage environmental effects • Description of environmental effects that may be caused by project	
Step 3 Submit an Environmental Assessment • Submit an Environmental Assessment summary form to provide the Ministry with project information to post in the EA area of their website • Submit the EA document to the Director, Environmental Approvals Branch for review and decision by MOECC	
Step 4 Public and Government Review • Ministry consultation with the public, Aboriginal communities, government experts and any other parties that express interest • Seven-week window for public comment • Mediation can be requested by proponent or any other interested persons at any time	

Individual EA	Class EA
during EA process	
Step 5 MOECC Review Review entails: • Review of all public, Aboriginal community and government agency comments • Proponent's response to the comments • Assessment as to proponent's compliance with approved Terms of Reference • Discussion of how proponent has satisfied requirements of EA act • Ministry has 5 weeks to write and publish their review	
Step 6 Public Consultation on the Ministry Review • Public, government agencies, Aboriginal communities, proponent or any other interested parties can provide comments in writing to MOECC or request a hearing • Five-week window for providing comments • Comments in writing are for the purpose of identifying any outstanding issues with suggestions as to how these could be resolved	
Step 7 Minister's Decision • Approval comes from Minister and Cabinet- project cannot proceed without this approval • Minister has 13 weeks to make the decision once the five-week public comment window has closed Minister's options: • Refer EA to mediation • Refer EA to Environmental Review Tribunal for a hearing • Table a decision- approve, approve with conditions, or refuse the EA	
Step 8 Implement the Project and Monitor Compliance *Implementation of the Project* • Upon EA approval, proponent needs to obtain other approvals as necessary (i.e., those under Species at Risk Act, Ontario Water Resources Act, Planning Act, Environmental Protection Act) • Construction can begin only when all approvals are in place *Monitoring of Compliance and Effects* Compliance Monitoring • Assessment as to whether project been implemented in compliance with EA	

Individual EA	Class EA
commitments, conditions of approval and monitoring framework for all phases of construction and decommission • Proponents are required to file annual compliance monitoring reports to the Ministry Effects Monitoring • Post EA approval, used to verify expected environmental effects and determine if additional impact mitigation measures are necessary • Ministry can request additional effects monitoring if deemed necessary *Minimum Legislated Timelines* • 12 weeks for review and decision on EA Terms of Reference • 30 weeks for review and decision on EA • Timelines are lengthened by time required for proponent to make any amendments	

In summary, individual EAs are for larger, more complex projects whose environmental impacts are less understood and therefore cannot be as confidently managed, without deeper study, as those associated with a Class EA.

Federal CEAA versus Ontario EA

The *Canadian Environmental Assessment Act* (CEAA) was established in 2012 and provides the legislative platform for federal environmental assessment throughout most of Canada. CEAA 2012 applies to undertakings that are described in the Act under *Regulations Designating Physical Activities*, as well as those projects designated by the Minister of the Environment.

The Canadian Environmental Assessment Agency is responsible for administration of the federal environmental assessment process in Canada. A federal EA may be necessitated due to negative environmental effects of a project on areas under federal jurisdiction or be the result of a federal decision regarding a project. Some projects may also fall under provincial environmental assessment.

In order to determine whether the Federal Government has an EA responsibility or interest, proponents are advised to contact the Ontario Assessment and Approvals Branch (EAAB) of the Ministry of the Environment and Climate Control (MOECC) in writing as early as possibly in the project planning process. This written notification should include information such as:

- Proponent's (and any consultant's) name and contact information
- Brief project description

- Delineation of study area
- Basis for opinion that individual EA may apply
- Basis for opinion that CEAA might apply
- Identification of other approval requirements
- Identification and description of any steps taken in EA process to date
- List of agencies contacted to date by proponents and nature of contact with these agencies
- Project description
- Preliminary schedule for submission of EA ToR

Once both the EAAB and CEAA become aware of the project, they will contact each other and discuss subsequent steps in the process. Both parties will communicate with each other throughout the EA process when necessary, with the EAAB providing coordinated guidance to the proponent as the process progresses.

Further details are available in Figures 2-1 below, which describe the key steps, roles and responsibilities for coordinating both “Traditional” and “Focused” individual environmental assessments with Federal screenings. The term “Traditional”, as it relates to environmental assessments, refers to those projects not as advanced in the planning process and a preferred “alternative to” has not yet been identified. In this case, federal authorities do not get involved until later in the process. “Focused” refers to a situation where CEAA is involved earlier in the process due to the fact the “preferred “alternative to” is known earlier- at the ToR stage.

CEAA 2012 applies to projects that are described in *Regulations Designating Physical Activities,* as well as to those projects designated by the Minister of the Environment. “Physical Activities”, as defined in the Act, include “*the construction, operation, decommissioning and abandonment of an all-season public highway that will be more than 50 km in length and either will be located on a new right-of-way or will lead to a community that lacks all-season public highway access.*” On this basis, it is highly likely that the all-season community road project would be subject to a Federal EA.

WSR240-REF-0109 NFN-All-Season Community Road Study-2022-05-02

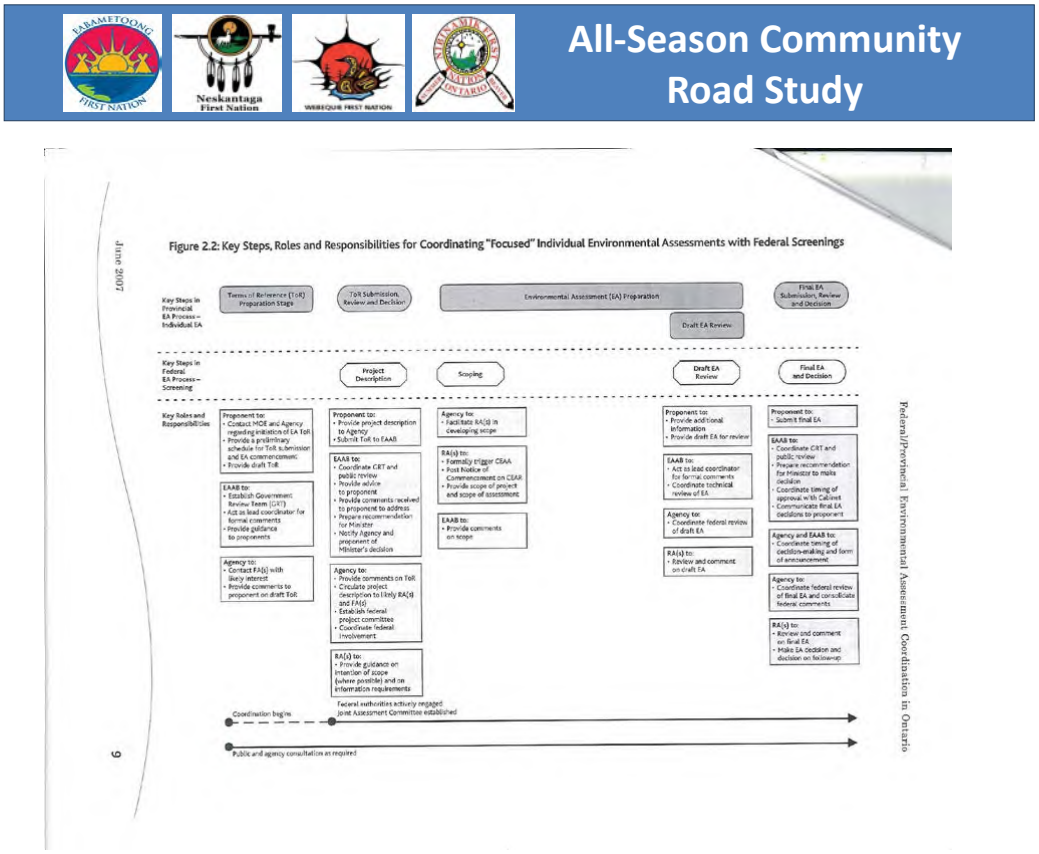

Figure 2-1: Key steps, roles and responsibilities for coordinating both "Traditional" and "Focused" individual environmental assessments with Federal screenings

(Source: Federal/Provincial Environmental Assessment Coordination in Ontario- Facilitating Implementation of the Canada-Ontario Agreement on Environmental Assessment Cooperation, Ontario Ministry of the Environment and Canadian Environmental Assessment Agency, 2007)

2.1.2 Public Lands Act

The *Public Lands Act* is the means by which Ontario regulates the use of crown land in Ontario. Crown Land is defined as lands which the Province of Ontario owns. The Ministry of Natural Resources (MNR) administers the *Public Lands Act*, and stewardship of crown lands. It includes the beds of most lakes and rivers and shore lands covered year-round or seasonally by rivers, lakes, streams or ponds. Crown Land does not include private land, nor federal lands and water bodies, such as the Trent-Severn and Rideau Canal waterways. There are a number of activities on Crown Land which require a work permit. These activities include construction of a road and water crossings, such as bridges, except when being done under the *Crown Forest*

Sustainability Act. Work permits are applied for through MNR, although these permits may not be the only permits required, as others may be required from agencies/organizations such as:

- Conservation authorities
- Ministry of the Environment and Climate Change
- Department of Fisheries and Oceans Canada
- Transport Canada
- Local municipalities/townships
- Other provincial ministries
- Utilities (i.e., gas, electric)

2.1.3 Highway Traffic Act

Ontario's *Highway Traffic Act* (HTA) is used to regulate the use of public roadways, including vehicle licensing and registration, administration of vehicle loads, classification of traffic offences, classification of vehicles and many other transportation-related issues including speed limits, signage, use of hand-held devices, accessible parking permits, child seats and vehicle safety inspections. The HTA represents Ontario's rules about transportation and applies to all public roadways, or "highways". In the HTA, "highway" is defined as "*a common and public highway, street, avenue, parkway, driveway, square, place, bridge, viaduct or trestle, any part of which is intended for or used by the general public for the passage of vehicles and includes the area between the lateral property lines thereof*."

2.2 Project Proponency

Every environmental assessment (EA) in Ontario, regardless of whether it is an individual or streamlined EA requires a proponent. The Ministry of Environment and Climate Control (MOECC) defines proponent as "*a person, agency, group or organization that carries out or proposes to carry out an undertaking or is the owner or person having charge, management or control of an undertaking."*

If the all-season community road progresses into an environmental assessment process, a proponent or proponents would be required to lead the process and serve as Applicant. The following section outlines some scenarios for proponency.

2.2.1 First Nations as Proponent

It is possible that the First Nation communities (or a separate entity established by this group) connected by the road could be the sole proponent of the project. Assuming that First Nations would not be funding the project to a significant degree, it is highly likely that the primary funding agency or agencies would want to at least be a co-proponent, in order to retain at least some jurisdiction over the road.

2.2.2 Government Agencies as Proponent

Under a scenario where provincial and/or federal government agencies would be funding the project, one or both of these agencies could serve as sole project proponent. Based on our observations and survey of community input, this scenario could be of concern to the First Nations communities that would be connected by the road, as they would likely feel that they would not have any control or say on road-related issues such as security.

2.2.3 Partnerships and Co-Proponency

One possible scenario for execution of subsequent planning steps in the all-season community road project could be a project partnership, where the First Nations being connected by the road (or a separate entity established by this group), would partner with either government and/or a private sector entity to serve as project co-proponents for the environmental assessment. Although not required, it is possible that the Co-proponents could also serve as partners in the construction and/or operation of the road.

2.2.3.1 Public Partners

Under this scenario, the First Nations being connected by the road (or a separate entity formed by this group) would partner and collaborate with government to serve as EA co-proponents and later in the construction and/or operation of the all-season community road.

2.2.3.2 Private sector Partners

This scenario would involve the First Nations being connected by the road (or a separate entity formed by this group) partnering with a private sector entity or entities to serve as EA co-proponents. It is possible, although not required that these Co-proponents could remain partners through the construction and operation stage, where the private sector entity could, for example, receive a guaranteed return on investment over a defined period of time in return for providing operations and maintenance services. There are many combinations of responsibility that could be considered with a variety of different partnership arrangements.

2.2.3.3 Private-Public Partnerships

Private-public partnerships involve a partnership between a public agency, Crown corporation, or even First Nations and a private sector entity that is interested in building and likely owning and operating the roadway on behalf of the public agency. Again, there are many variations as to how the partners would interact, based on financing/funding, source of operating revenues and level of ownership.

2.2.4 Ownership and Governance

In terms of ownership of the road, there are a number of scenarios possible:

- *First Nations as Sole Owner*
- *Government as Sole Owner*

- *Co-ownership by First Nations and Government*
- *Co-ownership by First Nations and the Private Sector*

Governance over the road may not necessarily equate with ownership. For example, it is possible that government could have a 100% equity stake in the road but have a co-management agreement with the First Nations being connected by the road. Under this scenario, a separate entity representing both government and the First Nations could co-manage the road corridor and perhaps other designated lands, as well as the administration, maintenance and operation of the road.

Ownership and proponency do not necessarily have to be the same. A party could agree to be the proponent for the purpose of conducting the EA and permit process, but may not, in the end, be the project Owner. There are many factors that will have to go into deciding these complex arrangements. However, a common theme that was raised in all three rounds of community engagement, is that the First Nations want some degree of ownership and control.

3 Community Engagement

3.1 The three rounds of community consultation

3.1.1 Approach to community engagement

Community Engagement for the study was divided into three rounds of engagement with each round providing increasingly more detailed levels of technical information to help community members make informed decisions. Two off-reserve sessions were also held in Thunder Bay.

Round 1

Round 1 focused on introducing the study and included details such as what the study is about, who is leading the study, and how the process of road corridor selection is typically done. A meeting was held with Chief and Council to provide an overview of the study and to obtain direction as to how to proceed with communicating information to membership. A community meeting was held and a feast provided. Two presentations were given to maximize participation. Members in each community provided translation services. Each community meeting was recorded. Community members requested that alternate tools such as a project website and Facebook page be used to both provide information to community members unable to attend the meetings.

Round 2

Round 2 presented five corridor options. These options were created based on previously developed corridors by resource companies and the existing winter road system. Additional technical information, including possible good things and bad things associated with an all-season road, as well as background information on general terrain and geology in the study area were provided to each of the communities. A meeting with Chief and Council took place to provide an overview of the data being presented to the community members. The community sessions divided attendees into specific age groups as directed by the Community Technical Coordinator. The website and Facebook page were introduced, and the same five corridor options were presented. Due to concerns about speaking outside of their peer group and general shyness, sheets of paper were given to each individual to write down comments and questions. These comments and questions were later read aloud anonymously to the group and responded to by the project team members. A community meeting and feast was also provided for those unable to attend the age-specific sessions.

Round 3

More technical information was provided to the communities in Round 3 regarding characteristics of the terrain each alternative would travel through as well as the number and width of water crossings. In addition, detailed information was provided in terms of estimated constructions costs of corridor options and other cost factors such as road maintenance, freight savings and potential changes to Ontario Works benefits and community transfer payments. Based on community input from the previous two rounds of engagement and previously studied corridors by the First Nation communities themselves, new corridor options were presented. As per recommendation from Chief and Council, Round 3 focused more on community youth. A band staff meeting was held, as well as a community meeting and feast was also provided to share the new information with the rest of the community. Again, due to concerns with speaking outside of their peer group and shyness, sheets of paper were given to each individual to write down comments and questions. These comments and questions were later read aloud anonymously to the group and responded to by the project team. Video interviews with Staff Sergeant Merle Loon of Nishnawbe-Aski Police Service were shown to the community members. Simultaneous translation was provided for each meeting, with each meeting being recorded, with the videos being posted on the project website. Additional effort was made to encourage community members to use the website and Facebook page as project resources.

Meetings with Off-Reserve Members

Chief and Council requested after Round 2 that an off-reserve meeting be held in Thunder Bay to ensure that all membership would have the opportunity to be involved in the study. The first off-reserve session included Eabametoong, Nibinamik, and Webequie. Two presentations were given to maximize participation. An overview of the Study was provided to all three communities, and the initial five corridor options were shared. Breakout sessions took place to allow for each community to discuss the study and ask questions. The Community Technical Coordinators provided translation services for their respective communities, and the meeting was recorded and placed on the project website. A separate session took place for Neskantaga due to unforeseen circumstances, with the same information provided.

The second off-reserve session took place after Round 3 and included members from Neskantaga, Nibinamik, and Webequie First Nations. No members from Eabametoong First Nation attended this meeting. The same technical information shared with on-reserve community members in Round 3 was provided to the off-reserve community members. This information included statistics, costing, and the new corridor options recommended by each community. Simultaneous translation was provided and the session was recorded and posted on the website.

3.1.2 Descriptions and Purpose of each Round of Engagement

3.1.3 Round 1 of Community Engagement

As part of Round 1 of community engagement, all four participating First Nations were visited during the two consecutive weeks of August 24, 2015 and August 31, 2015. In order to ensure community visits included as many community members as possible, as well as Chief and Council, only two communities were visited in each of the two weeks. Specific dates were as follows:

Nibinamik First Nation- August 24, 2015
Eabametoong First Nation- August 25, 2015
Webequie First Nation- September 2, 2015
Neskantaga First Nation- September 3, 2015

Community visits consisted of an initial meeting with Chief and Council to introduce the project and conduct a general discussion on issues related to current and previous all-season road initiatives, as well as available key information such as traditional knowledge and community land use information. Following the Chief and Council meeting, an open house format meeting was conducted in the afternoon. Presentation materials consisting of handouts and wall-mounted storyboards including maps were provided. The handout and maps are included in Appendix 3. Once the open house portion of the meeting had been completed, the consulting team project manager formally introduced the project. This presentation outlined the purpose of the study and provided an overview of the process and typical timelines of the process of all-season road development from concept development through to construction. A question and answer session followed each study presentation. A community feast ended the engagement session in each community.

Prior to the meetings, each community was e-mailed a flyer publicizing the meeting (see Appendix 4). These were posted on bulletin boards in the First Nation administrative offices. Radio announcements were made informing the community of the upcoming meeting and, in the case of Eabametoong First Nation, flyers were delivered door-to-door to further increase awareness.

Given the importance of the study and the need for community members to be as informed as possible in making the decision whether or not to proceed with an all-season road, it was critical that project information be made as accessible as possible. In order to maximize community awareness of and participation in the project, translation to Ojibway and Oji-Cree was conducted by a community member at each meeting. The consulting team representative, who is coordinating the overall project on behalf of the four participating First Nations, was responsible for organizing logistics. A video record of each event was translated and forwarded

to each community for broadcast on local cable television. As well, a project website was created to allow controlled access to selected project information.

Chief and Council in each community were briefed as to study objectives, scope of work and schedule by the Consultant team. Chief and Council provided a wide range of comments on opportunities and issues of concern with regard to the possibility of an all-season road. The project manager underlined the importance of timely acquisition of traditional knowledge (TK) and community land use planning information once the non-disclosure agreements are finalized with each participating First Nation. Chiefs and Councils provided details regarding available information, including maps and reports. Specific details of meetings with Chief and Council are available in the Chief and Council Meeting Notes portion of this report (Appendix 1).

Meeting attendance varied in the communities, with highest attendance in Eabametoong and Neskantaga. There was youth and elder participation in all communities. Community members were provided with details of individual non-disclosure legal agreements regarding TK information that would be made between SNC-Lavalin and each of the participating First Nations. The Agreement was signed in the presence of community meeting attendees in Nibinamik First Nation, Webequie First Nation and Neskantaga First Nation). Webequie First Nation, Neskantaga First Nation and Eabametoong First Nation requested that references in the Non-Disclosure Agreement to the “East-West Corridor Group”, be changed to the “All-Season Community Road Study Corridor Group”. The purpose of the change was to ensure they were not showing any particular preference to an east-west corridor, and to distinguish this study from studies conducted by resource companies. In the cases of Webequie First Nation and Neskantaga First Nation, these changes were applied manually to the existing non-disclosure agreement and initialed by both parties (SNC-Lavalin Inc. and the respective Chief). Eabametoong First Nation chose to review a modified agreement and have it approved through a subsequent meeting of Chief and Council. Agreements with all four participating First Nations have now been finalized and signed. During his presentations, Stephen Lindley made the point that although Marten Falls decided not to formally participate in the study, their lack of participation should not exclude consideration of interconnection with Marten Falls First Nation to ensure a more regional approach to road planning. The consulting team project manager warned that funding agencies could be hesitant to contribute to the advancement of the project if this study was not considered to be regional inn scope. Leadership in all communities acknowledged that interconnection of Marten Falls First Nation needs to be considered in the identification of a preferred corridor.

3.1.3.1 Comments by Community

Eabametoong

A representative of community leadership stated that since the study is community-based, it has to rely heavily on community input.

A representative of community leadership mentioned that Marten Falls has indicated preference for a north-south road alignment. She warned that the Province and Federal Government would only fund one road and Noront, while preferring an east-west route, ultimately would take any road access.

A representative of community leadership stated that she sits on the Matawa Chiefs Council and needs to ensure that there is alignment between the All-Season Community Road Study and activities associated with the Regional Framework that has been negotiated between the Province and the Matawa member First Nations.

A Band Councillor suggested that neighbouring communities should gain access to revenue that results from economic development. For example, if the Road were to connect to the Ring of Fire, there should be an associated revenue stream to FNs.

A Band Councillor stated that the community would be overwhelmed and would have many questions. A representative of the study consultant team re-emphasized the need to have families discussing the issue of the road amongst themselves as early as possible in the process, and then continue these discussions in larger groups before Round 2 of community engagement.

Neskantaga

A Band Councillor asked whether there could be a comparison done with a road from Pickle Lake with one from Nakina. A representative of the study consulting team responded that this would be done as part of the study, along with any other connections to existing all-season roads that may be identified as the study progresses.

Nibinamik

A representative of community leadership stated that there were common ideas about pros and cons of an all-season road:

Pros: reduced food/fuel costs, increased medical availability
Cons: increased access to substances; social challenges

Webequie

A representative of community leadership stated that the community is generally supportive, but there are some concerns about “opening up” the community. The Chief also mentioned that the community does realize that eventually the road will have to connect to the Ring of Fire.

A Band Councillor stated that the Consultant Team has to ensure that the community understands the purpose of this study is consensus building- that there is no road imminent. All participating communities must consent in order for the process to move forward.

A Band Councillor mentioned that the study has to consider the benefits of community member training to maximize community employment and procurement opportunities. He stated that some of the membership had already been trained for construction-related jobs and that there needs to be identification of the types of skills that can be transferred to other projects once the road is build.

Webequie First Nation, given its position at "the end of the road" and closest to the Ring of Fire, acknowledged that they have to respect the three other First Nations involved in the project and will depend on them for their support in order for the all-season road to progress through the development process.

3.1.4 Round 2 of Community Engagement

Round 2 of community engagement for the All-Season Community Road Study included visits to all four participating First Nations between November 4, 2015 and December 16, 2015. Given the nature and intent of the Round 2 meetings, it was necessary for the project team to spend two days in each community. Meetings were also held in Thunder Bay to accommodate off-reserve members of the four First Nations. Specific dates were as follows:

Neskantaga First Nation- November 4-5, 2015
Eabametoong First Nation- November 11-12, 2015
Nibinamik First Nation- December 1-2, 2015
Webequie First Nation- December 15-16, 2015
Off-Reserve Community members (Victoria Inn, Thunder Bay) – January 07, 2016
Off-Reserve Community members (Victoria Inn, Thunder Bay) – January 29, 2016

The intent of Round 2 of the community engagement process was to focus on talking with community members about whether the road is a good thing or not and to get input on road corridor alternatives that have been identified to date. The Community Engagement would typically consist of three sets of meetings; one set with First Nation Chief and Council and Administration Staff; a general community meeting; and small group discussions with different groupings of community members (by age group and/or role in the community).

Three key questions are being addressed by the Study:

1) Do the communities agree to develop an All-Season road (do the good things out-weigh the bad things);

2) If an all-season road is to be built, where should the corridor be located and where should it connect to the provincial highway system; and

3) What is the business case for the road; how will it be paid for; who will own and operate it.

Meetings with First Nation community staff were intended to better understand the following:

1) Costs of basic needs such as housing, food and fuel.

2) The delivery of social services.

3) The delivery of health services.

4) Traditional land use areas/community land use plans.

In addition to meetings with Chief and Council and a general community meeting, meetings were also undertaken in small groups, organized by age group and/or role of the individual in the community. Separate, or sometimes combined meetings were conducted with trappers and land users. In these meetings, participants talked about potential impacts and benefits of an all-season road, followed by discussions about corridor options that have been looked at so far. Participants were also asked to provide information on sensitive or sacred lands as an addition to TK information that had been collected and mapped previously.

Prior to the meetings, each community was e-mailed a flyer publicizing the meeting (see Appendix 4). These were posted on bulletin boards in the First Nation administrative offices. Community Technical Coordinators further publicized meetings via word-of mouth discussions, radio announcements and, in some cases, flyers distributed door-to-door throughout their community. For the off-reserve meetings, a flyer was distributed to members via e-mail. This is also included in Appendix 4.

In order to maximize community awareness of and participation in the project, translation to Ojibway and Oji-Cree was conducted by a community member at each meeting. Michael Fox, who is coordinating the overall project on behalf of the four participating First Nations, was responsible for organizing logistics. SNC-Lavalin provided project information and input received to date, and led many of the discussions. Consultant team members made detailed notes that were compiled later as official meeting notes for each community. These notes are available in Appendix 1.

A project website was launched (www.communityroadstudy.com) to provide key project information, as well as translated video of Round 1 engagement meetings. As well, a Facebook page (www.facebook.com/communityroadstudy) was established to encourage discussion both within and among the participating First Nation communities.

Chief and Council/Senior Administration staff meetings were conducted prior to community meetings in Eabametoong (November 11-12), Nibinamik (Dec 1-2, 2015), and Webequie (December 15-16). Time constraints and staff availability prevented these meetings from taking place in Neskantaga (November 4-5). A suggestion was made that the project team should gather additional information about the actual/realized impacts and benefits of an all-season road as experienced by other communities that have been connected to an all-season road in recent years. Suggestions included doing this by further research, by providing a speaker from a previously connected community to present during the Round 3 Community Engagement meetings, and/or providing a recorded video presentation by the speaker that could be presented to or made available in each community. Another suggestion was to utilize Community Liaison Officers to a greater extent in order to more effectively disseminate project information. There was also general concern that ”outsiders” will encroach into traditional territory once an all-season road is built, providing greater access to these lands and putting pressure on natural resources. Some suggested the First Nations should have co-management or shared responsibility of land use management with the Province. Administrative/regulatory jurisdiction over the road is also a very important aspect of First Nations ownership and control of the road. It was recognized that these are political issues that need to be discussed amongst leadership and perhaps in the Ring of Fire Regional Framework Agreement negotiations. Specific details of meetings with Chiefs/Councils and Administration staff are available in Appendix 1).

Although meeting attendance varied in the communities, the Project Team believes that providing smaller focus group/workshop style meetings contributed to increased attendance, and contributed to a higher comfort level for participants to speak at the meetings. Participants also appeared more comfortable speaking in the presence of peers in their own age group. In situations where community members were more hesitant to speak verbally, the Project Team provided pens and paper so that participants could write down their questions/comments for the Project Team to address to the whole group. There was participation by all age groups in all communities, although youth (under 24 years of age) were generally the least well represented.

Off-reserve members were very engaged in Round 2 of community engagement and expressed clear interest in continuing to participate in the all-season road study to the same degree as those members residing in communities. There was valuable input received from Participants specifically when they were discussing potential road corridor options. Participants provided input on notable landscape features, soil types and traditional knowledge sites or areas within the community’s traditional territory. Participants also provided valuable input on their preference for road corridor options.

3.1.4.1 Comments by Community

Eabametoong

One community youth aged 18-24 indicated that he would like to learn about other situations where an all-season road has been built to connect a remote community and suggested that guest speakers be invited to inform community members about this.

A community youth 18-24 expressed concern that opening up the area may introduce licensing requirements for hunting and fishing and could potentially impact lakes and rivers. A representative of the consultant team responded that it is unlikely that status First Nation members would be required to have a license within the community's traditional territory, but that details would have to be worked out at a later stage in the study.

One community youth aged 18-24 asked if any species-at-risk had been identified yet in the area. A representative of the consultant team responded by saying that the preferred corridor would have to be identified prior to undertaking a species-at-risk study. Another member stated that an important question for the community to ask themselves is whether the road will impact the ability to preserve their culture. A fellow community member responded that the loss of culture is already happening because parents don't take their children out on the land as often as in the past. It was their opinion that spending time out on the land is imperative to feeling and maintaining the connection to the land and learning the culture and language.

A community youth aged 18-24 asked whether the road would impose traffic laws. A representative of the consulting team answered that there will definitely be traffic laws, but at this point it is not known whether the road will be public or private, or which jurisdiction it would fall into. Another question was asked by a member regarding whether community members would need a driver's license to drive on the road. A representative of the consulting team answered by saying that likely yes, community members would need driver's licenses and insurance, but this would be an overall benefit to the community, as it teaches driving safety, encourages community members to get insurance and helps in the pursuit of employment opportunities.

One community youth aged 18-24 asked how involved the study team was with the land use planning team of Eabametoong First Nation. A representative of the consulting team stated that the consulting team has acquired all (to its knowledge) relevant traditional knowledge information compiled by the community and is incorporating this information into the process of identifying possible corridors for an all-season road.

A community youth aged 18-24 asked how the community would make the decision regarding an all-season road. A representative of the consulting team stated that communities would

have to decide the process on their own, be it by referendum or some form of consensus building process.

One community youth aged 18-24 asked whether the government would help certify and train community members to work on the road during construction and operations/maintenance stages. A representative of the consulting team indicated that details of training would have to be worked out, but that yes, the government would very likely provide these opportunities as part of the project.

A community youth aged 18-24 asked how much lead time people will get for training prior to road construction. A representative of the consulting team responded by saying that it would depend on the trade or specific job for which that individual was being trained. He also stated that the best-case scenario for start of construction would be three years.

A community youth aged 18-24 asked what the estimated maintenance costs of the road would be and who would be responsible for maintenance. A representative of the consulting team stated that the maintenance costs wouldn't be known until the type of road is decided later in the Study process. It is possible the maintenance costs could be similar to those of the winter road. The type of road would be decided by its intended use. In terms of maintenance responsibility, that would most likely be determined by whom actually owns the road.

A community youth aged 18-24 asked whether the size of the community would change with an all-season road in place. A representative of the consulting team responded by saying that it is difficult to predict whether the community will increase or decrease in population.

A community youth aged 18-24 asked whether the road would have an impact on climate change/global warming. A representative of the consulting team said that there would be an increase in the number of vehicles in the area. Further study is required the degree to which this would contribute to climate change.

A community youth aged 18-24 asked whether there would be "guards" on the road. A representative of the consulting team stated that there would likely be individuals responsible for the safety and security of the road.

A community youth aged 18-24 asked who would own the road. A representative of the consulting team responded by saying that it normally depends on who puts up the money to build the road. He mentioned that First Nations could borrow money to have at least a partial equity position in the road.

A community youth aged 18-24 asked whether it was likely that more companies would come into the communities and provide job/economic opportunities. A representative of the consulting team stated that because of an all-season connection, communities would become more

attractive to both First Nation and non-First Nation businesses. However, development within the community would happen according to the community's own objectives and protocols.

A community youth aged 18-24 asked whether construction would take place year-round and how it would be staged. A representative of the consulting team mentioned that the easiest time for construction is winter, because environmental impacts are less, but also said that construction can occur year-round.

A community youth aged 18-24 asked how trap line holders/trappers are going to be consulted as to where the road should go. A representative of the consulting team stated that he hopes trappers will identify themselves and they will be specifically included in both the current round and the next round of community engagement. He suggested that individuals, including trappers, use the traditional knowledge map available at the meeting to provide additional traditional knowledge information.

A community youth aged 18-24 asked what types of bridges could be used at the Split Rapids crossing if that route were chosen. A representative of the consulting team responded by saying that since the engineering review had not yet been completed, this question could not be answered confidently, but that typically concrete box culverts would be used to cross smaller streams and either concrete or wood and steel bridges would be used to cross the larger streams and rivers.

A community youth aged 18-24 asked whether the remaining two community engagement meetings will be sufficient to ensure traditional knowledge information is incorporated and considered in the process of identifying a potential road corridor. A representative of the consulting team stated that the consulting team is currently in the process of obtaining traditional knowledge data from Eabametoong First Nation and that the team encourages community members to identify any additional sensitive areas by delineating these on the maps provided. In each community engagement session, community members will be given the opportunity to ensure proposed corridors take all provided traditional knowledge information into consideration.

A community youth aged 18-24 asked whether there will be a website available for the communities to track study progress. A representative of the consulting team stated that a website is being finalized and will provide community members access to project information such as maps, newsletters, meeting notes and videos.

A community youth aged 18-24 asked whether there was a plan already in place for an all-season road. A representative of the consulting team stated that there was no plan already in place and that communities must first decide whether they want an all-season road at all. He also discussed the fact that Marten Falls is currently not participating in the study but still needs to be considered in the process to some extent, as any all-season road will need to connect to

the community. In addition, he mentioned that talks are ongoing between Webequie and Marten Falls at the Chief level in regard to them joining the study.

A community elder stated that community members cannot blame an all-season road for any loss of language, only themselves. He believes that parents are the ones who are not teaching their children the language. He prefers that an all-season road end short of the reserve, thus preserving some level of remote status with the federal and provincial governments.

Another community elder suggested that the community conduct a separate meeting with the Land Use Planning and Resource Team. He also would like to, with the installation of an all-season road, have the right to purchase land near his trap line and start a hunting/guiding business. Additionally, he mentioned that there would be no use in having an all-season road unless First Nations actually owned the road. He also does not necessarily believe prices will drop substantially and wants to be connected to neighbouring First Nation communities.

A community elder asked what would happen after the road is built and “the South comes to the North”. A representative of the consulting team responded that this is not known- the purpose of the study is to gather as much information as possible so that communities can make informed decisions.

A community elder suggested another route option from Pickle Lake, directly east to Eabametoong following the height of land -- has fewer water crossings. He also suggested a workshop be conducted where a matrix of pros and cons could be constructed to facilitate decision-making.

A community elder expressed concern about the impact on the traditional territory, particularly the environment. He referenced the days when tree planting was being conducted on the traditional territory, stating that garbage remains on the lands from that time. If a rail connection were to be considered, he would be very concerned about the potential for derailments. He doesn’t want to be the one to decide if there is to be a road, but does want to participate in the discussions.

A community elder prefers Corridor Option 5, as he prefers the link to Armstrong. He stated that the children and grandchildren have to be considered. He also mentioned the need to consider hydro and wind power opportunities, particularly in the Split Rapids area.

A community elder supported the road; sees the cost of goods dropping and is not particular about where the link to the South will be. He is concerned about trap lines and, generally, the impact of the road on traditional values.

A community elder stated that she doesn’t understand the process, but definitely sees the need for an all-season road. She is also somewhat concerned about the social impacts of the road.

A community elder indicated that she was undecided as to what option she preferred, but was concerned about her trap line, as well as impacts on the environment and traditional values.

A community elder stated a preference for Corridor Option 5. She said that it depends on the individual as to whether they will use the road to their benefit or disbenefit. She is concerned about the protection of traditional sites, as well as the impact on fish habitat. She also mentioned that past history in their area has seen that proposed development just goes ahead without adequate First Nations consultation and input. The member questioned where the corridor options came from and a representative of the consulting team stated that they were generated both from previous suggestions (i.e., Options 1 and 3) and following existing winter road corridors. In addition, he mentioned that the proposed corridor options were to stimulate discussion and could be modified, or eliminated altogether. He also indicated that new options could emerge from the process of community engagement as well.

A community elder stated a preference for Option 5. Her family's traditional territory is in the Armstrong (White Clay) area. She is aware of the existing logging roads in this area and their conditions.

Another community elder also originated from the White Clay area mentioned previously. She considers this her family's traditional territory and it is very special to her.

A community elder stated a preference for Option 5. She believes that good things will come from the road. She wonders where the funding will come from to support the road's operation and maintenance. She sees an improvement in health care with the arrival of the road. She does have concerns about protection of traditional sites and the ability of the provincial government (stated as MNR) to respect their traditional territory. Also mentioned by her was the need for improved power to support a potential hospital or high school.

A member of the community Stewardship Program discussed the program and its role in gathering information on the four pillars (social, economic, environmental, infrastructure) of the Regional Framework. He stated that the road study fits within the Regional Framework infrastructure pillar. Another member of the community Stewardship Program explained the role of video and multimedia in helping community members better understand the four pillars of the Regional Framework.

A community member over the age of 25 stated that his daughters have had health issues and shared a story about his daughters being delayed in getting appropriate health care. He sees the road coming and believes it would provide faster and better access to health services. In his opinion, the road needs to be planned right, using routes that are best for the environment and community. He thinks that the road would provide a means by which high school students could come home more often, as well as opportunities for new businesses.

A representative of community Leadership explained that the road study evolved from both the Regional Framework Agreement and the East-West Road Corridor Group. She emphasized that we have to ensure that we do not separate the Framework and the Road Study. She mentioned that it was important to not ignore Marten Falls – they opted out of the study, as it is their position to have a north-south road. It is still very important to consider them in the process. A representative of community Leadership also stated that she wants the road study maps to be available in the new resource centre.

A community member over the age of 25 relayed a story about a friend who had been opposed to an all-season link to Nakina due to increased access to substances. He recently passed away, but before he died, he said he had not been thinking about the future at the time he opposed the road. The member used to work at the power plant and was aware of how much money was spent on fuel. He realizes there would be significant fuel savings with an all-season road. Additionally, an all-season road would provide better access to trap lines and hunting. In his view, the road is going to come; it is better to take control of the process by being involved in moving the road project ahead. He thinks that First Nations should consider making their own laws and regulations to control outsider access. He said that if preserving remote status is important to communities, then the road should stop short of the communities. He also stated that he is tired of being poor and that the community should look forward to business opportunities and prosperities. He also thinks that the road will provide easier access to health services and help students finish their education outside the community because they will feel safer and less lonely. In his opinion, house-building costs will drop. Currently, airlines can charge what they want for freight, including building materials.

A community member over the age of 25 stated that community members have to start getting ready for a road. If the road is built, communities will lose their remote allowance, so they need to be prepared for such a time by getting a job, getting an education and getting a vehicle. The member also suggested that a north-south road be looked at between Eabametoong and Marten Falls.

A community member over the age of 25 identified a number of advantages to an all-season road: connection to other communities: more frequent visits with children in high school, more willingness by community members to get training and reduced reliance on air freight. The individual then identified some disadvantages: less safety in communities, reduced welfare payments and industrial encroachment from the south. She also was concerned about how young people can be helped to prepare for when the road does come. Currently, there is no day care, training centre and education centre.

A community member over the age of 25 suggested that the study team look at the experiences of other communities who have already had their remote communities connected to an all-season road network.

A community member over the age of 25 warned that if the First Nation communities participating in the study continue to "stall", the Mushkegowuk Tribal Council communities may go ahead and build an all -season road to Attawapiskat, as they are already undertaking a feasibility study.

Neskantaga

A community elder stated that past elders envisioned an all-season road, which at that time was perceived as something negative. The elder expressed concern regarding potential non-aboriginal ownership of the road, that First Nations have "no money", and there is the possibility of increased substance abuse through greater access to drugs and alcohol. However, this individual also mentioned that there is an all-season road not too far from Eabametoong through which drugs and alcohol currently enter the community and that these substances also enter the community via the winter road, so the drugs and alcohol will always be available to the community one way or another. It was mentioned that members have to understand not to use the road in a bad way, but a good, productive way. It was stated that the elders should not stop or outright support the road and that this should be a decision made by the community. In reference to traditions and culture, the member's opinion was that it was up to individuals to ensure that their culture and traditions are preserved and passed on to the younger generations.

Another community elder clearly stated he did not support the road, citing concerns regarding negative impact on young people, traditional livelihood and destruction of the land due to opening up of the traditional territory, over-hunting, increased government regulation and forest clear-cutting. He is also concerned about being seen as one of those who "opened up" the road, referencing 1959, when the elders helped define the reserve ("the box" as he called it), something he deeply regrets and does not want a similar situation happening to others.

Another community elder sees value in the road opening up new opportunities and reducing reliance on government funding, stating there are currently not many opportunities available. He is suspicious that government must want something in return for the road (i.e., access to mineral resources), and is concerned about the impact of mining on the water system and not sure how First Nations could possibly afford to operate and maintain the road. At this point, he cannot say whether he would support a road, needs more time to think, as well as more information such as costs before he makes a decision.

Another community elder recalls that when the airport began operating, they were assured that food prices would drop but it never happened, so he is skeptical regarding the possibility of lower prices. He cited an example of how at Mishkeegogamang First Nation, the quality of the housing did not improve despite an all-season road connection. He wonders who will pay for the road and how First Nations will get the money to pay for and maintain the road. At this point, he

does not support the road and suggests that the decision be put on hold for five years in order to see what the next generation will say.

A community elder stated that it is simply a matter of time before the road comes. He believes it is for young people to decide whether there should be a road. The elder warned that land could not be replaced once it is destroyed. He sees advantages from the health care perspective, as some medical transportation is not covered by insurance and there will likely be fewer missed appointments.

A community elder stated that he was raised on the land and never went to school. He considers the land very precious. He is concerned that people from the south will take over their traditional territory. An example cited was tourist camps, where community members have been told not to interfere with non-aboriginal people hunting and fishing. If a road is to be built, he believes it should be done to the east on the muskeg so that it does not destroy trees.

Another community elder stated that non-aboriginal people do not understand that they are different. He stated that Nishnawbe culture is very complex and difficult to understand and there needs to be more discussion of traditional values and culture so that it can be better understood and valued. It is important to understand the value of what will be impacted in order to make a proper decision on the road. The decision regarding an all-season road needs to fully involve First Nations and be a First Nations decision. He emphasized that he is not against the road; he is saying that traditional land use must be respected in the process of deciding whether a road is wanted and, if so, where it should go.

A community elder is concerned about the young generation and what has happened in other locations (i.e., missing and murdered aboriginal women). She is also concerned about the environmental impact of the road (i.e., impacts on water quality, trees, fish, animals) and increased flow of alcohol and drugs into the community from all-season road access. She is currently against the road, as it would be essentially giving up her land. The land is sacred to her and she doesn't agree with what non-aboriginals have done to her traditional lands.

Another community elder is concerned that a decision on the road has already been made. She thinks that high quality mineral exploration and forestry areas need to be reserved for development by First Nations if they choose to develop these areas. She is concerned about the elders being blamed by the younger people for the decision regarding the road. There is suspicion that the price of goods in the south will increase due to increased demand from community members coming down to shop. She is concerned about the economic sustainability of the community and stated that it is hard to run a viable business in the community due to high costs. She is not yet prepared to say yes or no to an all-season road. When asked by a representative of the consulting team whether there is a benefit to being

connected to other communities, she said yes due to the fact that many community members have relatives in neighbouring communities.

One community member asked how the road would be paid for without mining. A representative of the consulting team responded that it could possibly be paid for through, for example, tourism, cost savings, as well as fees/tolls and access permits.

Another community member asked whether the road project would provide work for locals. The member stated that some people had been skills trained through the KKETS program and there are no jobs. Their certificates will soon expire. A representative of the consulting team stated that first priority for jobs would be to First Nations workers and contractors. If the project were to proceed, a local skills inventory would be taken and compared with the work required to build, maintain and secure the road. He also stated the road wouldn't be in construction for at least three years, but that the time to consider training, especially for more skilled employment, is now.

A community member mentioned that he is very concerned about burial sites, emphasizing that these are very sacred places. He also said that he has spent years looking for and marking these sites.

A question was asked by a community member as to whether there would be an agreement between First Nations, the government and private companies regarding the road and who the owner of the road would be. A representative of the consulting team stated that whoever owns the road will likely charge for the use of the road. He also mentioned the need for a partnership agreement between whichever entities will be involved and that the intent would be aboriginal ownership.

A question was asked regarding how the decision will be made regarding whether or not to proceed further with an all-season community road. SA representative of the consulting team stated that this has to be decided internally by each community. He mentioned there are many factors to consider, such as who specifically decides (i.e., on/off-reserve), elders, whether to conduct a referendum and, if a referendum were to be conducted, specific referendum questions.

A community member aged 25-34 provided a number of advantages of an all-season road, including cheaper freight, improved health care (i.e., fewer missed appointments), more frequent visits with children in high school, lower grocery prices and an increase in the number of individuals with driver's licenses. She also said that there would be a reduced feeling of being "trapped" in the community, and this might reduce the frequency and severity of social and mental health issues and help high school students attending school in the cities to come home more often. She believes that the road will provide an opportunity for community members to experience the best of both (i.e., traditional and "Western") worlds and suggested that the road

would bring with it good business opportunities, such as shuttle and bus services. As for the impact of an all-season road on traditional values and culture, she believes that parents are responsible for passing this on. Her parents take her children camping and her son enjoys hunting. Her parents also hunt and fish to provide some of the food for her family. While she does not hunt and trap on a regular basis, she enjoys walking in the bush and fishing. She wants her children to be trained and educated and believes that an all-season road will improve the high school experience because parents will be able to see their children more often. She does not want her children to feel "trapped" on the reserve. She believes if young people feel less "trapped", there would be less substance abuse and suicide. The member stated that the needs of the youth are different from those of the elders. The elders are very concerned about preserving tradition, while the youth want to travel and explore. She believes the loss of traditional language by the youth is a result of exposure to television and the internet, as well as parents simply not speaking the language. She considers it important for the all-season road to link all of the neighbouring communities, as many members have relatives there they would like to visit, particularly for certain events such as funerals. The member stated that she prefers the Pickle Lake connection using the existing winter road connection.

The children all indicated they are proud to be Nishnawbe. Approximately 20% of the children could speak or understand Ojibway language.

One community member aged 35-54 suggested that the project team look closely at other locations where all-season roads have been extended into communities. He personally has seen both positive and negative impacts of large construction projects such as the construction of an all-season road. He sees that there has been a transition from a traditional to a modern economy and it is all about jobs now, not living off the land.

Another community member aged 35-54 has seen a lot of damage done to the land through mineral exploration activities such as the use of explosives, drilling, etc. He believes the road is for the future, for the youth and sees benefits such as more educational opportunities, new business opportunities and reduced cost of freight. At the same time, he also foresees other environmental impacts such as deforestation, fuel spills and effects on spiritual elements of the land, including the "little people" who live inside the earth. He would like to see the traditional lands under aboriginal/community control and mentioned that his father advised him to make claims where the aggregate deposits are located.

A community member aged 35-54 talked about how there is currently a community member waiting at the nursing station to be transferred to a hospital in the south, but has been unable to be transferred due poor weather. He said that she would have already received medical treatment by now if she could be transferred by other means, such as an all-season road. He sees the economic opportunities a road would provide, as well as greater access to training and education for young people. There is concern on his part that the road will provide opportunities

for people from the south to hunt and fish in places previously not accessible. It is his view that it is the community and parents' responsibility to teach the culture and language to the children. He says that he organizes and conducts traditional ceremonies in the community, but very few people attend. One of these ceremonies is the "Shaking Tent" ceremony that is principally done to predict the future. He believes that social impacts of the all-season road, such as increased access to alcohol and drugs, can be prevented by individuals choosing how they want to live.

Another member aged 35-54 stated that he wants to see an agreement between the government and First Nations that would specify who would be responsible for/have control of the road prior to giving approval for the road. He supports Corridor Option 1 and believes that the option connecting to Armstrong would be complicated by negotiations with the forestry companies. In regard to trapping, he considers the practice as being no longer sustainable.

One community member aged 35-54 indicated that his biggest concern is the environmental impact. His daughter is working in the south and wants to "make it" in the mainstream. When she returns home, she struggles with issues such as poor housing and water quality. The member doesn't consider himself a traditional/cultural person, but enjoys being out on the land and wants to hunt and fish. He considers an all-season road something for the future, but emphasized that communities need to get enough information to make an informed decision- they need to know what they are saying yes or no to.

A community member aged 35-54 is concerned about who will make the final decision regarding the road and how that decision will be made. He is concerned about how a scenario where a community is not in agreement with the others about a proposed route and how that situation will be dealt with. He feels that a decision-making framework needs to be agreed upon by the four communities. Another member indicated the community has a development protocol that provides a mechanism for community consensus. He suggested the community look into utilizing that procedure for determining community support for the road. The member indicated that members have to be present at the meeting to be a participant. It is noted that this could affect off-reserve membership participation.

One member aged 35-54 stated that he supports the road, but only if agreements between the government and First Nations are in place beforehand.

A member aged 35-54 stated that an all-season road would be an asset to the community, as it would promote tighter connections with neighbouring communities and strengthen the traditional culture through the ability to more easily conduct ceremonies and pow-wows involving multiple communities. He also feels that a road connection would help to keep off-reserve members connected to their home community. He wants to see more employment opportunities and realizes that change is going to come eventually. It is also his opinion that government should provide First Nations with more control over their land.

Another member aged 35-54 believes that all children and grandchildren in the community want employment, education and improved housing. She supports an all-season road that would connect to neighbouring communities. She acknowledges that there will be a lot of challenges from the road that won't go away (such as social issues), but stated that this is up to individuals to make these life choices. It is her view that the road will provide cheaper groceries and better access to a wider retail selection. She is concerned with the impact on the land, as well as wildlife and the little people.

One member aged 35-54 indicated that he would like learn about other situations where an all-season road has been built to connect a remote community and suggested that guest speakers be invited to inform community members about this.

Nibinamik

A Band Councillor asked whether a potential all-season road would be a provincial or a private road and who would pay for the road. A representative of the consulting team responded that this depends to a large extent on where funding comes from. He also mentioned that the current winter road maintenance costs would be factored into the cost/benefit analysis for the all-season road. The same community member mentioned during part of a larger subsequent discussion on all-season road impacts that after Mishkeegogamang First Nation had become serviced with an all-season road, substance/alcohol abuse dropped from approximately 60% of the community to 10-20%.

An Administration staff member stated that community members need more information and the Community Liaison Officer needs to be involved through the development of a communication strategy. He also suggested a full-time Coordinator from each community as part of the study team.

A representative of community Leadership stated that it is very important for people to understand that Noront Resources and the government have their own timeline for the all-season road project. If the four First Nations stall for too long, they will lose control of the process and it would be driven by these proponents. He also stated the need to ensure that First Nations control the laws and policies associated with the roads through ensuring substantial participation in joint or co-management of land / land development and ability to control access to the land.

A Band Councillor asked how the land beside the road would be managed, given that it will be built within Crown Land. He stated that there had been previous instances where roads have been built in traditional territory, but non-aboriginal development has occurred on these roads. A representative of the consultant team stated that this will depend on ownership of the road and regulatory jurisdiction, as well as arrangements made between First Nations, government agencies and private sector firms that may/may not be involved in the all-season road

development. The same member stated that First Nations are fully aware of their jurisdiction and their inherent rights. They are trying to impress upon the government that there is already governance in place in the jurisdictions through which the road may run. A representative of community Leadership responded by emphasizing the importance of ensuring that road discussion occurs around the Ring of Fire Framework Agreement negotiations.

An Administration staff member mentioned that there should be discussion with the community about changes in transfer payment funding and what benefits would be lost by having and all-season road. He stated that information is available in each community's audited financial statements that are now required and are available online to help with the cost/benefit analysis for the road study. He also suggested that each community member be able to give their opinion on the road and that this be done in written format for ease and accuracy of translation through a community survey.

A Band Councillor stated that he agrees with the road but suggested using security tools such as gates to control access from "outsiders". He emphasized the need to think of future generations and also suggested building treatment centres along the road to promote healing in a more familiar environment that is closer to family.

A Band Councillor is of the opinion that the membership is particularly concerned with what resources will be removed from the land once an all-season road is built.

A representative of community Leadership stated that there is always a top-down decision-making approach in the community. He stated that there needs to be more due diligence at the community level and that leadership needs to focus on the community wants and needs.

A community elder stated that many elders in the past have said that if members do not allow an all-season road to go through, industry will build the road itself. He emphasized that this is a significant concern. He also asked, given the scenario of a critically ill community member, whether they would still be airlifted out. Also expressed by the same community member, was skepticism of the road being only for use by community members. He indicated that this might be the case now, but perhaps not in the future. Another question he asked was whether there would be the possibility of starting First Nation-owned businesses related to shipping, taxi/mass transportation and fuel sales. A representative of the consulting team responded that these were indeed possible businesses that could be developed.

A community elder asked whether driver's licenses and insurance would be required by those using the all-season road and, if so, whether this would apply to other vehicles such as snowmobiles and quads. A representative of the consulting team responded by stating that it would have to be determined whether the road would be a provincial highway or private access road, and therefore subject to different laws.

A community member stated that he supports the road and that if the First Nation communities do not decide to support an all-season road, the government will find a way to build the road to the Ring of Fire without First Nations involvement.

A community member agreed with the previous community member, stating that government and/or industry will build the road regardless of whether First Nations support it. He stated that there is enough development happening in the area to support road tolls. He sees opportunity in selling First Nation-owned commodities, such as fish and gravel.

An informal survey was conducted to determine the current level of support for an all-season road. Six elders supported the road, with five individuals supporting Option 5 and the other having no specific preference.

One community member stated that if the all-season road were built, community youth would leave for education. The individual expressed concern about challenges in maintaining the community youth population.

An Administration staff member stated that he supports the idea of the road but not the options provided to date. He is concerned about who will maintain the road if and when industry leaves the region. He mentioned that if Option 1 is adjusted, other nearby First Nations such as Wunnumin Lake will be able to connect to the road and more communities will benefit. He supports a link to Highway 808, as it would need only a single additional crossing.

A community member said that he is in favour of the road, stating that due to global warming, there is no other option but to build an all-season road, as the winter road season is getting shorter and shorter and costs of re-supply are going to go higher. He mentioned that he is aware of the road pros and cons and feels that the cons can be mitigated. It is his view that the road will bring economic development to the communities and will reduce the cost of living in communities. He sees the road as an opportunity for transmission lines and associated economic development opportunities and prefers road corridor options located on higher ground, as they are more cost-effective, referring to Option 1 specifically. He is concerned how the road is going to be regulated and maintained. He sees the road as an opportunity to exercise some control over the movement of cargo to the north.

A community member stated that the all-season road had been considered previously through community surveys. He also said that the community meets only when someone visits and that they need to start meeting and discussing the all-season road issue together.

Children asked questions about the security of the road, expressing worry about terrorists entering the territory. The majority of the children indicated they would want a road, without knowing any other information.

One community member asked what would happen to a chunk of diamond if it were found during road construction. A representative of the consulting team stated that there are existing mining regulations regarding harvesting mineral resources and these would apply in this case.

A community member stated that Neskantaga has previously charged Nibinamik a large sum of money for use of the winter road and asked whether there had been discussions on drafting up a contract stating that individual First Nations cannot charge each other for use of their road segments. A representative of the consulting team stated that ultimately the answer came down to governance of the road, which is often determined by ownership

One community member asked who will maintain the road and mentioned that some communities are better at maintenance than others. A representative of the consulting team stated that one possible scenario would be a road authority owned equally by the four First Nation communities.

Webequie

A Band Councillor indicated that there is a cost associated with First Nation staff providing support to any study through activities such as gathering data. He stated that government funding is declining and the community needs better access to jobs and economic development. It is his view that the all-season road will open up community members to more opportunities such as education. He emphasized that if an all-season road were to be built; First Nation communities would need to have some control over land use and land management in their traditional territory. Reconciliation of past wrongs must be part of the all-season road negotiation process, as people in the Pickle Lake region have been very “brutal” to the Nishnawbe people. He suggested that the study team carefully examine the Aroland, Geraldton and Armstrong links. He also stated that an elder be hired as part of the study team.

A Band Councillor asked whether there was a possibility for the road to be upgraded at some point in order to accommodate it being used to support mining operations. Michael Fox indicated that this was possible.

A Band Councillor mentioned that he would like to have more project information sessions in the community. He feels it is important to give the community as much information as possible to make informed decisions and ask what they want. Community members should be asked where they prefer the road to connect to the existing all-season road network.

A Band Councillor indicated that his position on the all-season road issue is neutral and that, to this point in time, he has not been provided with enough information to convince him that his quality of life would improve. It is his opinion that all four communities need to be connected. In addition, he stated that Webequie would support Marten Falls if they chose to look at their own

all-season road and would also support them as the First Nations lead in an examination of the feasibility of an industrial road to Black Thor.

A community member stated that the community has to learn from the experiences of other communities on the real impacts and benefits of an all-season road. He asked who would own the road and indicated that if construction is not undertaken carefully, environmental impacts can be quite serious. He also stated that it would be better if Matawa Tribal Council, not individual member First Nations, were involved in the ownership of the road in order for all member communities to benefit from any revenue generated from the road.

A community member stated that he sees other First Nations such as Kasabonika Lake benefiting through having a main or trunk road to connect to. He indicated that the study might be more beneficial if it addresses the needs of all of the communities in the immediate area. He stated that since the 1960s, the four communities tried to work cooperatively on numerous initiatives, with no results. Michael Fox mentioned that the scope of later stages of the study could be expanded to include other communities.

A community member mentioned that he has participated in previous sessions and understands how there was consensus among the four communities to do the study. He supports the road and believes there will be time to look at the good and bad aspects of it. When asked by a representative of the consulting team what should be the next step in the process to look at the good and bad aspects, he said that the terrain in the area needs to be looked at in order to identify eskers and aggregate sources. A representative of the consulting team responded by saying that our team of terrain analysts is currently using desktop methods to identify key information such as location of eskers, aggregate sources and soil types. The same community member also suggested looking at traditional sites and a representative of the consulting team responded by saying that the project team has acquired traditional knowledge information from each of the communities.

A community member mentioned that there are neither resources nor capacity in the community to identify terrain types, aggregate sources, etc. A representative of the consulting team responded by saying that the project team does not expect the community to collect this information, but to provide whatever information they can to the team so that it can be mapped and considered in the process of identifying potential road corridors.

A community member stated that there has to be community consensus regarding potential business opportunities that may result from the road. He believes that if communities do not have this consensus, then one community could potentially blockade the road.

A community member emphasized the need to protect the land accessed by the road, particularly from forestry and mining. He wonders how activities such as clear cutting can be prevented from happening. If there is too much accessibility, or no control over the road, there

could be uncontrolled development of tourist camps. He would like to see First Nations have land use plans in place along the road corridor.

A community member suggested that there be only one entry point to the road to control access into the territory. This would control use by “outsiders” and serve as a checkpoint for drugs and alcohol.

A community member mentioned that he had earlier suggested to a represent of the Ring of Fire negotiating team the idea of moving a portion of reserve land onto the road alignment in order to allow First Nation communities to create/apply aboriginal laws and controls and to have ownership. He prefers the Nakina/Geraldton connection, as he is of the opinion that Pickle Lake does not have as much to offer in terms of wholesale goods such as building supplies, etc.

A community member expressed concern about how few community members had attended the meeting. He suggested that Chief and Council conduct a survey to ask whether they support an all-season road or not and, if they do support the road, which corridor (i.e., east-west or north-south) they prefer. He is of the opinion that the results of the survey will guide the project team as to whether more community engagement is required. He suggested that people would be more engaged if they knew there was strong support for a road.

A community member suggested getting information somehow to/from off-reserve community members. He believes the road will bring in both good and bad things.

One teacher asked about the estimated cost of the road. A representative of the consulting team responded that for a road approximately 325 km long, the cost would be approximately $500 million-$1 billion. He stated that bridges for river crossings have the most impact on cost, and that better cost estimates would be generated by the end of the study and presented in Round 3 of community engagement.

Another teacher asked what kinds of bridges would be built on the road, as students would be interested because they are learning about bridges in Grade 6. A representative of the consulting team indicated that the types of bridges would include pre- cast concrete bridges and culvert bridges, as well and steel and wood span bridges.

A representative of the consulting team asked how many of the elementary students thought the road was a good idea and the majority of the students raised their hands in support.

A community elder stated that previously they had been told that power would only cost $20/month. The community was satisfied with that price, but it now costs $100-$150/month and many community members are unable to afford those rates. He also mentioned that First Nations should be involved in ownership of the road, working together with other

funders/owners. This is the only way to ensure a level of First Nations control and an ability to set rules for the road.

A community elder wants community members to be provided with information in advance of the community engagement meetings so that they are better prepared. Before each round of community engagement, he wants to know what was said in previous meetings. He feels that community members will be better prepared and will know what questions to ask. The elder also suggested that members/selected members of the four communities be assembled to discuss the all-season road. He also mentioned that if a survey were to be undertaken, it is important to include elders and middle-aged individuals, as well as youth because the youth would always say “yes” since they are not engaged/informed enough to make decisions.

A community elder stated that she could not decide yet what to say or where the road should go. She feels that it is always the same people that come to the meetings- others need to be more involved. In her view, the community needs to come together and make a clear decision as to what to do.

One community member suggested that the road both start and end on a First Nation reserve in order to maximize control.

A community member suggested that information come to the community prior to the next meeting and suggested that it be done in the form of a videotaped presentation that can be shown to the community.

One community member suggested having a more direct route, with Webequie and Nibinamik independently connected to Neskantaga, then on to Eabametoong.

A community member said it would be good to see a road, but understands that many good and bad things will come with it. She added that her community has to work together with the other communities to ensure rules and laws are in place. It is her view that the road is for future generations.

One community member feels that her community needs to work together with other communities to look for consensus. In her view, the community has been talking about the road for too long. She wants to see lower costs for groceries and building materials in the community. She also stated that the communities have no money to invest in a road.

Off-Reserve Members

An Eabametoong community member stated that with an all-season road, people will have the ability to obtain their own food outside of the community at lower prices. They expressed concern, however, regarding how children will be kept secure in the community and prevented from running away.

An Eabametoong community member could see a scenario where a scheduled bus service would run between communities, as well as out of the communities to major centres such as Thunder Bay.

An Eabametoong community member mentioned that an all-season road would allow people to travel into Thunder Bay to get their own building supplies and fix their own homes, instead of waiting for the band to do so. She said that currently, community members have to travel further away to harvest trees for heating their homes. Because of this, soon they will have to rely more on diesel generation, so an all-season road will help by moving the community one step closer to being connected to the power grid. Also, she mentioned that having an all-season road will help with moving building supplies associated with necessary upgrades to the water treatment and sewage systems.

An Eabametoong community member asked whether the Ministry of Transportation of Ontario would maintain the road if it is owned by the Province of Ontario. A representative of the consultant team responded that yes, it likely would be through contracts similar to the winter road maintenance contracts with the First Nations, but that no decisions have been made.

An Eabametoong community member asked how First Nations will be able to get jobs associated with the road, given that union workers typically get highest priority, followed by those with the most seniority and those with a Grade 12 education. Given that most First Nations community members are typically non-unionized or uneducated, he figures most of the jobs will go to someone else and the communities will only receive a very small proportion of the jobs. A representative of the consulting team responded by giving the example of the Lower Mattagami Hydroelectric Project being conducted in partnership by OPG and Moose Cree First Nation. In this case, First Nations were encouraged to come forward with a list of those members were already trained or in training programs. An agreement was reached with the unions to give qualified aboriginal job candidates priority. He mentioned that these kinds of employment arrangements would be part of the negotiation process associated with the all-season road project.

A Neskantaga community member asked whether off-reserve membership would have employment opportunities associated with the all-season road construction. Stephen Lindley responded by saying that in order to get people trained to get these jobs, training needs to start now and for people that are already trained, they need to maintain their certification so that they can take advantage of the job opportunities when they happen. The same community member stated that she prefers an option that would not result in longer travel times to Pickle Lake. She then asked why this is the first time off-reserve membership is being informed of the project. She also asked why the study team does not utilize a younger off-reserve member to get involved with the study and conduct meetings with fellow off-reserve members. The member also suggested that if the all-season road project were to proceed, communities should consider

building an alcohol treatment facility for the people. In conclusion, she believes this road will allow families to see each other more often and pay less for food and other goods. She recommended that the project team conduct further off-reserve meetings. A representative of the consulting team responded by mentioning that the idea of building a treatment centre had been suggested previously. He said that while people have said that the road will increase substance use, others view it as improving access to treatment and healing.

A Neskantaga community member asked if there have been any culturally significant sites identified as a result of consultation. A representative of the consulting team responded by saying that the study team have collected traditional knowledge information from each community that will be treated as “no -go” zones. In addition, he mentioned that the team has met with trappers, elders and other land users to obtain more traditional knowledge data.

A Neskantaga community member asked whether the forestry company owns or has exclusive access to these forestry roads and whether that would complicate this option. A representative of the consulting team responded that while it would be cheaper to use existing roads, access or use of these roads would likely require another set of negotiations/discussion with the forestry companie(s).

A community member stated that they would prefer Option 1, as it would not make use of any existing roads or have to deal with any existing road users. They expressed concern that if the government owns or controls the road, it will severely limit First Nations involvement. A representative of the consulting team responded by saying that there are two basic questions involved in this for First Nations: (1) Do we want the road? ; and (2) If we want the road, under what terms and conditions?

A community member asked if there was ever a discussion about the use of inspection checkpoints, similar to those at border crossings, to limit the flow of illegal substances entering into First Nation communities. A representative of the consulting team responded by stating that there has been discussion of tollgates for toll collection, but to date no one had suggested integration with inspection services

A community member commented that boundaries have to be created so that First Nations can have their own by-laws and regulations in order to protect their traditional territory. In their opinion, this would prevent unwanted people from entering the territory and wasting valuable natural resources. The member stated that the all-season road would help control the cost of goods. A representative of the consulting team responded by saying that this was a common theme mentioned in previous community meetings. He also mentioned that in parallel to development of an all-season road (if the communities choose to proceed with it); communities should be preparing economic development plans so that they can be prepared to benefit from the road to the greatest degree possible.

A community member asked where the funding for the study was coming from. A representative of the consulting team responded that the federal government, through FEDNOR and the provincial government, through the Northern Ontario Heritage Fund Corporation, each are funding 50% of study costs. A representative of the consulting team also provided the links to the project website (www.communityroadstudy.com) and Facebook page (www.facebook.com/communityroadstudy).

Focus of conversation was on community members discussing various route alternatives based on key terrain features such as eskers, as well as positioning the road so as to optimize connections with communities to the north, including Wunnumin Lake and Kasabonika Lake.

A Nibinamik community member stated that First Nations community members do not realize that they don't need all of the processed foods available in local stores, as there is more than enough food and medicine available on the land to sustain them. In her view, Chiefs and Councils simply do what other communities are doing and are "blinded" by technology and everything that looks convenient.

A Nibinamik community member stated that she has been in Thunder Bay since 2011 due to an accident her daughter was involved in that required a high degree of medical care. Her husband is also sick. When she told her daughter about attending this meeting, she was excited at the thought of being able to return home. She has brought her daughter home a few times now, but it is very expensive by plane. She does not oppose the road, as, in her words "we cannot stop the future, it's already happening."

A Webequie elder sees great benefit in the road, as it would allow off-reserve community members to travel more cheaply and easily back to their communities to visit their families and homelands. He also sees it helping to reduce the cost of living. He is greatly concerned with increased public access to traditional territory and believes that planning needs to take place that ensures impacts are mitigated and non-First Nations people do not impact their traditional territory.

A Webequie elder is concerned about public access from industries such as mining and forestry if an all-season road were in place.

A Webequie elder stated that the project team has to look at opportunities along the proposed road such as water, aggregates, etc. and consider rest stops for passenger cars/families along the all-season road.

A Webequie elder recommended focusing on the youth in any road construction project by involving them in training and skills development related to road construction and maintenance. He stated that when youth are bored and not doing anything, they tend to get into trouble.

A Webequie community member supports the road. He mentioned that the winter road brings in more drugs and alcohol. He sees benefits from families in Thunder Bay being able to visit family members in communities more regularly. He also stated that there are several jurisdictional issues and challenges associated with different types of roads such as public roads, private roads, etc.

A Webequie community member stated that controlling access to the road is the biggest issue he is hearing from community members. He believes the benefits such as business opportunities have to offset the impacts.

A community member asked why government and corporations think they own the project when the money is coming from the public and the land via resources and not their own pocket. A representative of the consulting team responded by saying that this is exactly the purpose of the Regional Framework discussions currently being conducted with the Province. When First Nation communities are at the negotiating table for any project now, the value of the land is now playing a significant role in discussions. Models for agreements are now much different than those drafted previously.

One community member stated that people in the communities think that life for off-reserve members in the city is great. She said the truth is that it is difficult being a member of First Nations living in the city, as we don't have access to fresh air, water and everything nature has to offer, plus they have to pay taxes. In her view, First Nations people should be teaching our children to live off the land instead of bringing them into the city.

A community member asked how long the study will take and when the final decision regarding the road will be made. When her family first moved into Nibinamik, the elders said that they have not had any outside contact because of the social problems that occurred in Mishkeegogamang once the all-season road was in place. The elders wanted to remain isolated and did not want an airport because it would allow more contact with the "outside world." These elders have now passed and now there are a lot of young people with substance problems and there is no work. There is no new development, no improvement in the community because of these substance problems. Neskantaga First Nation has their own training facility and should use this to their advantage to train their people. A representative of the consulting team responded by saying that these are all issues that need to be addressed before decisions can be made about the road. The same community member responded by saying that all-season road access is being driven by the greed of companies to have access to mineral resources in the Ring of Fire. She suggested slowing down the process of reaching out to the communities, as they are not yet prepared to deal with the large developments that are going to happen. She added that First Nations people have to use education to develop skills so their own people can control access to the road.

A community member asked whether the government is funding the road and who will be "in charge" of the road. A representative of the consulting team responded by saying that there is no answer to this question yet, as there are a lot of other items that need to be considered before control and ownership is determined. He also reiterated that there would be overlap between the all-season community road study and the Framework Agreement negotiations.

3.1.5 Round 3 of Community Engagement

Round 3 of Community Engagement for the All-Season Community Road Study included visits to all four participating First Nations between May 5, 2016 and May 17, 2016. Given the nature and intent of the Round 3 meetings, it was necessary for the project team to spend two days in each community. A meeting was also held in Thunder Bay to accommodate off-reserve members of the four First Nations. Specific dates were as follows:

Neskantaga First Nation- May 5-6, 2016
Nibinamik First Nation- May 9-10, 2016
Webequie First Nation- May 11-12, 2016
Eabametoong First Nation- May 16-17, 2016
Off-Reserve Community members (Prince Arthur Hotel, Thunder Bay) – May 29, 2016

The intent of Round 3 of the community engagement process was to provide community members with detailed information assembled by the project team regarding the following questions:

1) Do the community members and communities support development of a community-based all-season road?
2) If there is community support for an all-season road, where is the best location for the road corridor?
3) Is there a business case for an all-season road? Will an all-season road be economically sustainable?

The community engagement would typically consist of four sets of meetings; an initial meeting with Chief and Council, a youth meeting or youth open house, a general community meeting and concluding with a band staff meeting.

Chief and Council meetings were done initially to organize the logistics and approach for the two days of community engagement. In response to input from leadership in all communities to try to better engage and inform youth in the communities, meetings were organized with door prizes to improve attendance and duration of stay at meetings. General community meetings were accompanied by dinners, again to optimize attendance and duration of stay in order to further disseminate project information. The final meetings were with band staff and the object of these

meetings was to provide these staff with project information that they could disseminate should they receive queries from community members unable to attend any of this round's meetings.

Prior to the meetings, each community was e-mailed a flyer publicizing the meeting (see Appendix 4). These were posted on bulletin boards in the First Nation administrative offices, and, in some cases, distributed by hand throughout the community. Community Technical Coordinators further publicized meetings via word-of-mouth discussions and radio announcements. Project team members were radio guest in Nibinamik, Neskantaga and Webequie First Nations. For the off-reserve meetings, a flyer was distributed to members via e-mail. This is also included in Appendix 4.

In order to maximize community awareness of and participation in the project, simultaneous translation to Ojibway and Oji-Cree was conducted by a professional simultaneous translator at each meeting. Simultaneous translation services were provided in Webequie, Nibinamik, Neskantaga and Eabametoong. Fox High Impact Consulting who is coordinating the overall project on behalf of the four participating First Nations, was responsible for organizing logistics. SNC-Lavalin provided project information and input received to date, and led many of the discussions.

Consultant team members made detailed notes that were compiled later as official meeting notes for each community. These notes are available in Appendix 1.

Chief and Council meetings were conducted prior to community meetings in Neskantaga (May 5-6, 2016), Nibinamik (May 9-10, 2016), Webequie (May 11-12) and Eabametoong (May 16-17).

A representative of community Leadership in Nibinamik expressed the importance of the all-season road study not getting ahead of the Regional Framework negotiations, as these two activities had to move in tandem. He also mentioned that elders had expressed the importance of continuing with discussions on the road study so that government doesn't take over the process. There was general agreement to the idea tabled by the project team to assemble a quorum of leadership from each community in Thunder Bay for a meeting in mid-June. At this meeting, leadership would:

1) decide whether to continue the all-season road planning process and, if
2) they did decide to continue this process,
3) select a preferred corridor for the all-season road.

Specific details of meetings with Chiefs/Councils and Administration staff are available in the Meeting Notes portion of this report (Appendix 1).

The youth meetings were initiated by an overview of the Round 3 presentation provided by the project team, then followed up by dividing attendees into two groups who would each discuss Question 1 (Do the community members and communities support development of a community-based all-season road?) and Question 2 (If there is community support for an all-season road, where is the best location for the road corridor?).

3.1.5.1 Comments by community

Eabametoong

One Band Councillor asked who would be responsible for law enforcement/security associated with the road. A representative of the consulting team responded that if it were provincially owned, the OPP would have responsibility; if privately owned, it would be enforced by NAPS.

A Band Councillor stated that the province's 2018 deadline is driven by the election. Stephen Lindley stated that beyond this date, the current government could not commit the funding for a road.

A community member asked whether the community could maintain their remote status for the purposes of Ontario Works benefits and community transfer payments if the road were constructed. A representative of the consulting team stated that this was unlikely.

A community member asked how fast first responders could get to the scene of an accident.

Another community member asked whether other communities that have all-season roads still prohibit alcohol.

A community member asked for the projected timelines for completion.

A community member asked whether the government is waiting for a report.

A community member stated that any design for a road needs to include optional routes in the event of a washout or accident.

A community member asked whether members are aware of the liability of owning a road.

Another community member asked how much a bridge would cost to insure. A representative of the consulting team stated that these are all good questions, but they would need to be answered by further study as the planning process progresses.

A community member asked whether Eabametoong's current forestry initiative (harvest rights to specific areas) would be considered as part assessing the feasibility of the project should the community choose to continue with the planning process for the all-season road.

A community member asked about how further planning and development of the all-season road might affect the broadband project and asked whether it would be coordinated with the road study. They mentioned that current routing is along the winter road corridor.

Another community member expressed concerns about social issues stemming from the all-season road and how these would be dealt with given that the community isn't currently dealing with the issues at hand now. The member asked how the children can be healed if the parents haven't healed themselves.

A community member stated that leadership of each of the First Nation communities needs to be in control of their territory and that the road needs to benefit the communities first, not industry.

A community member expressed concern about the loss of additional benefits (i.e., Ontario Works, community transfers) resulting from reduction in remote status and asked whether remote status would be preserved if the road did not directly connect to the community.

A community member asked has how much influence this all-season road study has on the Ring of Fire and whether this study is tied other community benefits.

A community member stated that when you start abusing the land, bad things happen. He mentioned that non-First Nations people couldn't comprehend the fact that in native culture, everything is alive.

Another community member stated that they should start building the road to connect the communities first so that members can see the benefits and can be ready when it is connected to the highways.

Neskantaga

A Band Councillor stated that it is difficult for both leadership and community members to attend activities because air travel is very expensive.

In the youth sessions, the positive aspects of the road identified were: (1) Better access to health care; (2) Reduced cost for supplies and services; (3) Wider variety and greater amount of food available; (4) More opportunities to obtain skills for better jobs; (5) A reduced/eliminated feeling of being "trapped"; (6) Employment opportunities associated with the road; and (7) Cheaper travel.

In the youth sessions negative aspects of the road that were identified included: (1) Traditional activities would be affected; (2) Increased access to substances; (3) Loss of comfort and security; (4) More opportunities for criminal activities (i.e., murders, kidnapping); and (5) Nothing will actually change.

Question 3 (Is there a business case for an all-season road? Will an all-season road be economically sustainable) was discussed as a group. A number of questions were asked, including: (1) Would the road coming through affect the hunting cabins and would these cabins be forced to shut down?; (2) How will the road be maintained?; and (3) If this becomes a reality, would those who work on the winter road lose their job or still be employed to work on the road?

A community member asked about the need for vehicle insurance. A representative of the consulting team responded that if the community adopts the Highway Traffic Act (HTA) within the boundaries of the reserve, drivers would be required to have vehicle insurance, registration and licensing. Similarly, if the all-season road is considered legally to be a public highway, rather than a private road, the HTA will apply.

A community member stated that they would like to hear about changes in quality of life from members who had an all-season road built previously. The member mentioned that they drive through Mishkeegogamang and see poverty and therefore wonder what the benefits of the road are. A representative of the consulting team mentioned that he had recently spoken to a member of Lac Seul First Nation and they said that they would never go back to the old way of life, as they have benefitted from improved medical services, overall convenience and lower costs.

Another community member asked whether there is any comparison available on the cost of groceries for a family pre/post all-season. A representative of the consulting team stated that more information would be required in order to answer this question, but ultimately market forces would determine it.

A community member stated that the prices in urban areas increase when the winter road is open and asked whether an all-weather road would change this trend. A representative of the consulting team stated that food prices increased all over Ontario and Canada last winter due to cold weather, change in U.S. exchange rates and higher fuel prices.

One community member stated that they were almost 100 years old and that they have been hearing about the road since the community began. They were told that everything would be cheaper once the airport was built, which was not the case. They were also told that water quality would be better, but it has been 20 years since they have been able to drink from the tap. The member stated that community members do not know the full effects of an all-season road and that the Neskantaga people should be able to live off the land and have jurisdiction. They further stated that if the road were used in the wrong way, more negative issues will appear in the community; if used in the right way, there would be many benefits to the community.

One community member stated that he is worried that the water from the south is polluted and will only get worse, noting that he has seen many strange bugs and animals that are hurting people.

A community member asked how traditional activities will be affected when/if the road is built and who would own/control the road. Stephen Lindley stated that there is no First Nation that has the money, nor wants to spend to build and/or maintain the road. This is a point of negotiation between the province and the First Nations. He also mentioned that there is potential for the First Nations to have control over the road, at least to a degree, without having the money.

A community member then asked how far outside of the reserve limits would they have "control" of the road. A representative of the consulting team stated that there is more potential for negotiation of rules on a private, rather than a public road. He reiterated that this is all part of negotiation of the type of road between the province and First Nations.

One community member stated that they could put the funding they receive as members ($4/year) toward maintaining the road. The same member indicated that more information around environmental impact and land-based stewardship will need to be provided to the community as the planning process continues, such as through and environmental assessment.

Nibinamik

A representative of community Leadership stated that it was important to not let the all-season road study get ahead of the Regional Framework negotiations.

A Councillor stated that they have been encouraged by elders to continue discussions on the road study so that government doesn't take over the process and leave the First Nation communities without a strong voice.

A Councillor stated that a land use planning-based Shared Territory Protocol had been signed with Neskantaga two years ago and is in the implementation phase. They added that Webequie wants to join this protocol, as they have already signed agreements with Noront and Marten Falls.

On top of the good things and bad things listed in the Round 3 Handout, the youth identified the following positive aspects of the road: (1) More jobs, opportunities, and businesses; (2) Can travel at anytime; (3) Closer access to medical hospitals (4) Ability to take family vacations.

On top of the bad things listed in the Round 3 Handout, the youth identified the following negative aspects of the road: (1) Land disturbance; (2) Marital issues; (3) Vandalism and stealing; (4) Loss of language; (5) Loss of trap lines; (6) More opportunities for criminal activities (Gangs, predators, and drug traffickers have access to the communities).

A youth stated that food prices are too high and that her paycheck disappears as soon as she goes grocery shopping to feed her family.

A youth stated that there should be checkpoint security for safety, such as a border patrol.

A youth stated that the road would affect the younger generations; more drugs would get into the communities. The youth referred to the epidemic back in 2012 with the use of oxytocin.

Webequie

In the youth sessions, positive aspects of the road were identified as: (1) It will help us to get off the island, open doors, and get better educations; (2) More opportunities to visit family members in other communities or major centres; (3) More opportunities in general for travelling; (4) Lower food prices; (5) More business opportunities; (6) Better opportunity for an arena; (7) Better opportunities for education, jobs, improved health care; (8) Lower housing costs; (9) Reduced freight costs; (10) Cheaper travel.

In the youth sessions, negative aspects of the road were identified as: (1) Less would get to the community due to Webequie's location at the "end of the road"; (2) Increased access to substances; (3) Non-First Nation people will come and may or may not take our younger generations – abductions; (4) More members would leave the community; (5) More outsiders/non-First Nations people could access the community; (6) Pollution of trap lines; (7) Loss of interest in culture; (8) Less protection of land and water.

One youth suggested building wind turbines for power generation, as it would be cheaper and easier to deliver the tools, supplies, and equipment by road.

Another youth suggested building hydro turbines for power.

A community member stated that this is the third round of community meetings and community members still don't ask enough questions. The member had concern about social issues resulting from the road, but saw the road as providing cheaper freight and food. Also expressed were concerns about the lack of elders at the meeting and the overall impact of the road on the community.

A community member mentioned that they have been told that they will get employment from the road, but don't see in the study exactly how First Nation people will get employment. Employment should be focused on, as, according to this member, all they see in non-First Nations people working in the community. The member also wondered why two options were eliminated. A representative of the consulting team explained why the two options were eliminated and further discussed the pre-feasibility and feasibility stages of project development.

A community member asked why Marten Falls was not shown as being connected in any of the corridor alternatives. A representative of the consulting team responded by stating that they were invited to join the group, but decided not to, as they are set on a north-south connection to the provincial highway system.

One community member asked about the impact of climate change and natural disasters on the all-season road and how that would impact the study or future planning works related to the road.

A community member asked what options other communities met so far with in Round 3 have shown preference to. A representative of the consultant team indicated that Nibinamik generally prefers Options 6 and 7, while Neskantaga prefers Option 9.

A community member mentioned that it is close for Eabametoong First Nation to connect to the existing logging road (Ogoki Road). A representative of the consulting team indicated that Eabametoong has spent money to look at the Split Rapids connection to link with the Ogoki Road.

A community member stated that they prefer that distances along the road among communities should be minimized to the greatest degree possible and mentioned that a connection to Pickle Lake is preferred because he believes not as many people would encroach on their land as opposed to a link to the south.

A community member asked if the winter road would still be maintained. A representative of the consulting team stated that there would possibly be a transition phase between the winter road and all-season road.

A community member mentioned that the community has to start thinking about transmission and other things that could come with the road. Mining companies and governments have long-range plans, so should First Nation communities.

Off-Reserve Members

A Nibinamik member stated that Summer Beaver has had arrested development for a number of years. They could see the all-season road being built and causing deterioration of the community similar to what happened in Mishkeegogamang. Also mentioned was that the education system has never been adjusted to meet the needs of community members and that leadership through Chief and Council, rather than an Elder's Council, was an idea imposed by non-First Nations people.

A community member asked whether there would be better housing, water systems and job opportunities if the all-season road were built. Other questions asked were whether or not the all-season road will encourage members to stay in the community and whether health care

services would improve. A representative of the consultant team responded that leadership is looking at the possibility of continuing with the study to better answer these kinds of questions.

A community member stated that youth were asked directly if they would leave if the all-season road was built and none of them said they would, they would only leave to visit major centres for short trips.

A community member asked why the road was being “forced” on community members. They indicated that it appears to be “someone else’s idea” as part of a “secret agenda.” The member is of the opinion that there is significant potential in the traditional territories of the communities for tourism.

Another community member stated that people have different aspirations for their community, themselves and their family and these help drive their decision regarding the all-season road.

A community member commented that it appears the all-season road is already going to go ahead. In their view, it appears there has been a lot of money spent on the community meetings. They oppose the road when they think of the potential impact on their grandchildren and great-grandchildren of more substances entering the community. They stated that they have heard about other communities who have had an all-season road built, with no benefit to the communities. The member wonders whether there actually will be better housing, education, health services and lower grocery prices. In their view, members need to take into consideration the cost of gas and vehicle wear and tear.

A community member asked whether it might be possible for non-First Nations people to have to pay a toll to use the road. In their view, the government charges for use of provincial parks, so why can’t non-First Nations people be charges to use the road, camps, rivers, etc. that are in their traditional territory? The same member stated that there is a need for better financial oversight and general sharing of information by leadership, as members are not as informed as they should be. A project team member responded by saying that leadership is very busy juggling many complex issues. They continued by mentioning that what is being looked at is the road and its associated benefits and concerns. The project team is looking at how to best mitigate these concerns.

A community member mentioned that that, having worked in their community for many years, they have noticed that each community is different and has their own approach to managing it issues. In their view, there should be a liaison worker that can connect with off-reserve members. The member also mentioned that substance abuse has always been present and that it will never disappear. It is the responsibility of each community to create awareness as to how its members can help themselves.

All-Season Community Road Study

A community member stated that if there were an all-season road connecting to Highway 808, there could be a checkpoint there that could serve as a border to allow for inspection. Another suggestion has been to not build the road all the way to Highway 808, but to use the river crossing as a winter road. The same member stated that there are still outstanding issues between Neskantaga and Nibinamik in the development of their shared territory protocol regarding potential resource development in traditional lands.

A community member asked what other NAN communities think about the all-season road. A representative of the consultant team stated that other communities outside the four involved in the all-season road study are looking to connect to this all-season road. Some communities have already realigned the winter road to connect via an all-season road to Pickle Lake (Weagamow). A representative of the consultant team stated that Chiefs and Councils are not rushing into the decision and that all impacts and implications would be looked at and studied.

A community member stated that the road is going to happen; it is just a matter of who is going to build the road, when and how fast. Government and the resource companies are not going to wait for First Nations. The member continued by stating that they have a lot of questions about the road if the project involves the First Nation communities, which is why conducting the next phase of study, is so critical. Community members have a choice- they can use the road in a good way or a bad way.

4 Question 1: Should There be an All-Season Road

4.1 Community profiles – An Overview

The socioeconomic profile of the 4 FN communities shows some differences between them. Table 1 illustrates that the First Nation community of Eabametoong has 5 times (1060) the population of Neskantaga, which is the smallest community (230). There are no non-aboriginal peoples in Webequie and few (25) in Eabametoong for a 2.3 ratio of non-aboriginal identification in the community. The four communities are homogenous of aboriginal descents.

Table 2 points up to an important difference between all the selected region and nations with the 4 communities of the Northwest of Ontario: the total population is much more homogenous in the later. Questions of degree of penetration and access to traditional land might not be such an issue.

4.1.1 Education and Training

In terms of education, First Nations education levels are significantly lower than overall provincial education levels. This reality has a clear impact on employment opportunities and well-being. Nibinamik seems to have a higher proportion of high school graduates or above (38.6%). However, this is below First Nation provincial average.

Table 2 shows that the level of education in terms of high school certificates or above is the lowest of the five selected regions and nations for the 4 communities without ASR in Northwestern Ontario as well as for the Inuit of Nunavik.

4.1.2 Labour Force

The labour force population is generally more revealing than the overall population or the population aged 15 years old and over, since it doesn't take into account the inactive population. The labour force is defined by Statistic Canada as people of working age (15 years old and over) who are participating workers, either employed or looking for employment. Students, people who are unwilling or unable to work and people who are retired, are not included in the labour force. Communities with a low participation rate therefore have more people who fall in those categories. For example, a community with a low participation rate like Eabametoong may have a population of 1 060 but an actual labour force of 335. It is important to note that the "worker" definition commonly used in statistics does not include subsistence or other traditional activities that are more present in First Nation communities. It seems that higher population equal lower participation rate. This can easily be explained by the lack of jobs and opportunities within communities.

Compare to communities in NWT, the unemployment rates are much lower in the NWT and much more interesting for the communities with AWR served. The employment rates for the Cree communities are even better with almost 80% compare to 28.6 % for the 4 communities without AST in Northwestern Ontario.

4.1.3 Income

Earning differs from income as it does not take into consideration government transfers and other sources of income, making it easier to compare different populations based on employment earnings. The average annual earnings is $16 450. Nibinamik having the highest median earning with 18 716 and no data are available for Neskantaga. Aside from the Inuit communities from Nunavik which no access to road transportation exists, the average incomes - including earning - are lower for the 4 communities. We observe a favorable difference between the communities served by AWR. Differences are less important for communities in NWT that includes not only aboriginal communities.

4.1.4 Crime

The Nishnawbe-Aski Police Service (NAPS) covers a large area of approximately 200,000 square kilometers in Northern Ontario. The NAPS is divided into three sub-regions: the Northwest, Northeast and the Central Region. The latest is comprised of 7 Matawa communities consisting of the 4 communities of this study as well as Aroland, Constance Lake, and Marten Falls First Nations. The Central Region office is located within NAPS General Headquarters in Thunder Bay.

In the Central Northern region, the leading cause of criminal activity in communities is prescription pills and alcohol.[1] Violent crimes defined as homicide, assault and sexual assault totalize 970 in Nishnawabe, which represents a decrease compared to the data used in the table for 2012-2013.[2] There is less gang activity in the Central Region than the Northwest region, but gang activity is present in Eabametoong and Neskantaga. Connection to gangs comes from Regina, Toronto and Ottawa.

“The nature of the NAPS service jurisdiction poses challenges given the relative isolation of our communities and the sheer size of the NAN territory, that being over 700,000 square kilometers.”[3]

Compare to other selected regions, the anticipated phenomena would be to see higher numbers of crimes due to easy access to transportation. This is to be nuanced by many other factors. In any cases, the 4 communities without ASR in Northwest Ontario have a higher number of

crimes (95) and the region as such has a higher level of crime (1185) compare to 314 for the NWT.

4.1.5 Health & Well-Being

The Community Well-Being (CWB)[4] index was developed by Aboriginal Affairs and Northern Canada Development to help measure the quality of life of First Nations and Inuit communities in Canada relative to other communities over time. It is a method to assess socioeconomic well-being and facilitates the comparison between First Nations and Inuit communities and other Canadian communities. Statistics Canada's population census produced "well-being" scores (from 0 to 100) for individual communities based on four indications: (Aboriginal Affairs and Northern Canada Development, 2010):

- Education level (High school; university);
- Labour force (participation, employment);
- Income (total per capita); and,
- Housing (Quantity: defined on the basis of overcrowding, Quality: defined on the basis of major repairs).

In 2006, the average community well-being (CWB) score for First Nations communities in Canada was 57, well below the average CWB score for non-aboriginal communities estimated at 77. The relative flatness of First Nations' CWB score distribution indicates that First Nations' well-being is very diverse and that the average CWB score is not necessarily representative of most First Nations communities, like it is for non-aboriginal communities. Indeed, 85% of all First Nations communities have a CWB score anywhere from 40 to 70, compared to 83% of all non-aboriginal communities with CWB scores from 70 to 85 (Aboriginal Affairs and Northern Canada Development, 2010).

In Ontario, the gap between First Nations communities and non-aboriginal communities is more substantial than the national average (20% gap). First Nations have a much lower average CWB score. Furthermore, this major gap has persisted since 1981. Table 1 shows a smaller variability between the 4 communities: they are anywhere from 46 to 50. The community of Eabametoong has an average CWB score of 46.

Compare to selected region and nations, Crees (65) and Inuit (59) have a better score for community well-being than the 4 communities of Ontario (48). This can be partly explain by the numerous resources development project in the areas as well as the agreements and treaty that protect traditional territories and favored aboriginal control over access to and the use of tradition and community land.

[4] Aboriginal Affairs and Northern Canada Development. (2010, April). *First Nation and Inuit Community Well-Being: Describing Historical Trends (1981-2006).*Retrieved from www.aadnc-aandc.gc.ca.

In terms of health issues, it is difficult to capture specific data for each communities but it is clear that area characteristics, such as socio-economic conditions and remote location are part of the equation that explain the elevated injury rates in high-percentage Aboriginal identity areas. There is a higher all-cause injury hospitalization rates based on socio-economic status in Northern Ontario's First Nations communities, compared with similarly located non-Aboriginal communities[5].

4.2 Overview of Good Things and Bad Things

Prior to Round 2 of community engagement and included in the information package provided to community members for this round was a table (see table 4-1) of potentially good things and bad things about an all-season road. This table was compiled by the project team to “seed” community discussions on the topic. It was the result of what the project team would anticipate as good and bad aspects of the road and what had been expressed by community members in Round 1.

All-Season Community Road Study

Table 4-2: Possible Good Things and Bad Things About an All-Season Road

Possible Benefits (Good)	*The following are very preliminary possible benefits and negative (bad) effects of all-season road construction and operation. Until further environmental assessment is conducted, these possible benefits and effects are only "possible" and how big the benefits and effects cannot be estimated.* Economic ➢ Lower cost of basic needs such as food, building materials and fuel ➢ Increased economic opportunities along the road ➢ Opportunity for First Nations to own and operate the road ➢ Road corridor could be used for transmission lines and fibre optic cable- cheaper power and better, faster internet ➢ More "people traffic" in First Nation communities ➢ Wider range of goods and services available ➢ More ecotourism business opportunities available ➢ Employment during construction and operation ➢ Opportunities for revenue generation from road ownership and subsequent investment in economic development opportunities Education / Training ➢ Opportunities for capacity building and business training (based on community ownership of the road) ➢ Opportunities for youth- employment and easier access to education and training. ➢ Training programs more accessible and affordable ➢ Parents can see their high-school aged children more often ➢ Possible higher overall education levels and capacity Health Services ➢ Improved access to health care clinics and personnel ➢ More routine, preventative health care - fewer emergencies ➢ Improved diets due to cheaper, healthier food available (i.e., less diabetes, rickets) Social Benefits ➢ Better and more accessible support for substance abuse/mental health issues ➢ Higher household incomes from increased economic activity; improved standard of living ➢ Better connection to neighbouring communities/relations all year
	Other ➢ Possible for electricity transmission lines to be built more cheaply within the road corridor: o Reduced reliance on diesel generation o Reduced environmental impacts from diesel generation o Lower cost and more reliable electricity o No further restriction on growth based on capacity of diesel generators o Possible for connection to hydro power generation ➢ Possible for fibre optic cable lines to be built more cheaply within the road corridor: o Improved high speed internet connection o Improved telecommunications o Reduced costs of telecommunications and internet connection
Possible Impacts (Bad)	Natural Environment ➢ Possible impacts to the natural environment could occur from road construction and operation. o Possible impacts to animal habitat and animal movement o Possible impacts to plants (loss of habitat) o Possible impacts to water resources (from erosion and fuel spills) Social/Health ➢ Easier access to substances, possibly causing more health and social issues in the community ➢ More exposure/movement to urban areas ➢ More outsiders coming into the area causing possible social issues Economic ➢ Possible loss of government transfer payments previously paid due to remote isolation status ➢ Easier access from the south for outsiders, including tourists and resource developers, to get onto traditional territories for hunting, fishing, resource exploration, etc. could put pressure on animal populations and movements Culture ➢ Easier access to the outside and more internet access could put pressure on traditional language, traditions and culture ➢ Possible for outsiders to access and affect sacred areas/lands/places ➢ Easier access to the south could reduce interest and participation in traditional activities (trapping, hunting, fishing, berry picking, etc.) ➢ More outsiders coming into the area causing possible pressure to decrease use of traditional language and culture

4.2.1 Considering the "Balance" of Good Things and Bad Things

Community members see both good and bad things about the road- few appear to have firmly entrenched positions one way or the other. They clearly recognize that the decision is a balance between these good and bad aspects. One message that was very clearly made was that members want more information, particularly as it relates to the following issues:

- Ownership of the road and what that might entail
- Regulation of the road, particularly as it relates to: (1) security; and (2) controlled access
- Policing of the road and implications of the Highway Traffic Act if it is applied to the road
- Protection against potential environmental impacts
- Road maintenance and liability for road and crossing structures

4.3 Health Benefits and Concerns

The communities unanimously see a number of health care-related benefits from an all-season road:

- More preventative health care since community members will have fewer missed appointments and more regular check-ups
- Improved diets from the availability of cheaper, healthier food that will undoubtedly be available due to reduced freight costs
- Fewer health emergencies

As for concerns, some community members cited the potential for environmentally-derived health problems from contamination of ground and surface water from mining activities. In addition, some members expressed concern for potential health hazards from road construction, such as the impact of on spawning areas and fish habitat from water crossings or road operation from fuel spills impacting water quality and corresponding health of fish and wildlife.

4.4 Policing, Licensing, Insurance -- Benefits and Concerns

4.4.1 Operating Vehicles on the Road

The rules and regulations under which vehicles would operate on the all-season road will depend on the eventual ownership and governance of the road itself. It would also undoubtedly be the result of discussions between the Province and the First Nations connected by the road. If the road were to be designated a provincial highway, it would most likely be policed by the OPP and subject to the *Highway Traffic Act* (HTA). If the road were to be a private road or one with a special designation or status, it would likely be policed by the Nishnawbe Aski Police Service (NAPS) and it would be up to the communities as to how traffic laws would be enforced. It very likely would be subject to the HTA given the likelihood of all-season road funding coming

from the Provincial and Federal Governments and the significant issues of insurance and liability.

4.4.2 Controlling Access to Lands

Membership from all communities expressed concern, in all rounds of engagement, about uncontrolled access to traditional lands by non-First Nations people as a result of all-season road access. A number of suggestions were made by community members for securing road access, with most of the suggestions being focused on the using a border-like security gate where inspections could be done for controlling the import of substances and, for example, access permits by non-First Nations could be inspected. Further to this point, some community members suggested the institution of a traditional lands access permitting system for non-First Nations individuals and businesses, administered by an oversight authority, perhaps as part of an overall co-management agreement.

4.4.3 Input from Nishnawbe Aski Police Service

An interview was conducted with Staff Sergeant Loon to shed further light on the concerns expressed by the First Nations through our consultation activities. This exchange is summarized below.

How will the laws regarding licensing, registration and insurance change with regard to the construction of an all season road? Will the rules change on reserve?

- If the provincial road goes through the First Nation community, the community has the option to follow the Highway Traffic Act within the reserve boundaries.
- If the community adopts the rules of the Highway Traffic Act, they will be applied to the road and will be enforced by the police service.
- A community has the option to not adopt the rules and regulations associated with the Highway Traffic Act.
- Each community will have its decision to make regarding registration and insurance regulations.
- Regardless of any decision made by the community, once an individual leaves the reserve, all rules and regulations apply.

Are communities that adopt the rules and regulations of the Highway Traffic Act safer?

- In a sense it would make it safer. It ensures that each member will meet certain requirements (age, etc.) to operate a vehicle.
- Lack of regulation ties the hands of law enforcement with regards to dealing with unsafe driving practices that would be a traffic violation under the Highway Traffic Act.

Will NAPS be willing to discuss the options with each First Nation community?

- They will be able to share experiences and discuss the pros and cons of each approach with the communities.

Are outsiders required to have licenses to conduct activities like mining, logging, fishing and hunting? Are there any differences than if there is no road?

- All rules and regulations apply, and efforts will be made by law enforcement and associated agencies to ensure public safety.
- Education of officers may be required regarding licenses, rules and regulations to ensure that individuals comply with the law.

Will First Nations Community Members need to follow rules that were not previously required?

- The road should not change rules and regulations.
- Education will be required on the part of both the communities and law enforcement to ensure that both parties are aware of what is required, and what to expect.

Will regulation of the all season road differ from that of the existing winter road?

- Technically the rules and regulations are the same, however being a winter road, it is not as heavily policed.
- An all season road will likely be higher police presence over time.

4.5 Managing Resources Along the All-Season Road

In light of the concerns regarding non-First Nations access to the traditional lands of the communities and protection of the natural resources therein, there was discussion by community members with the project team around the possibility of local community members serving as the equivalent of Ministry of Natural Resources Conservation Officers. The role of these officers would be to ensure fishing and hunting regulations are being properly enforced and these activities are being conducted by non-First Nations people are properly controlled.

4.6 Comparison of Similar Communities Before and After All-season Road Development

Investigating the impact of construction of an All Season Road in analogous communities can provide a general indication of trend that could be expected in connecting the four First Nation Communities with an All Season Road. Two major criteria that were observed were impacts on employment and criminal activity after the All Season Road was constructed in Slate Falls in 2005.

The labour force statistics over the time period of 1996 to 2011 has shown progressive improvement with a significant reduction in the unemployment rate 2006 onwards. The overall reduction in the unemployment rate has been reduced from 25% in 11996 to 14.3% in 2011.

Table 4-3: Slate Falls - Labour Force Statistics

	1996			2001			2006			2011		
Labour Force Indicators	**Total**	**Male**	**Female**	**Total**	**Male**	**Female**	**Total**	**Male**	**Female**	**Total**	**Male**	**Female**
Males 15 years and over by labour force activity	70	35	35	85	45	40	110	55	50	120	65	55

Source: Statistics Canada

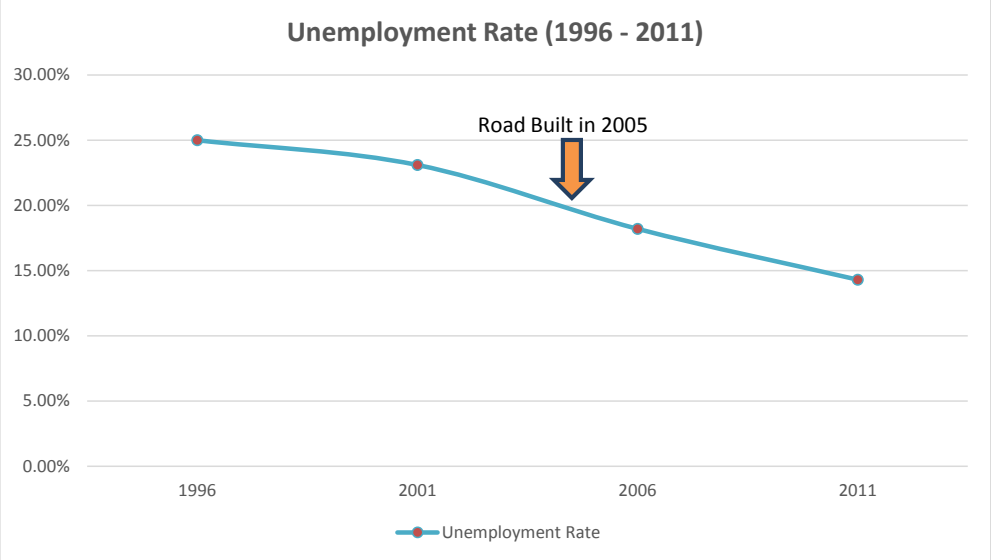

Figure 4-1: Slate Falls - Unemployment Rate

We have consulted with Nishnawbe Aski Police Service (NAPS) to receive crime statistics for Slate Falls both before and after the construction of the All Season Road to determine if there was any observed between the road and criminal activity. The summary of that exercise is outlined in Table X below.

Table 4-4: Slate Falls - Crime Statistics

	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014
Total Occurrences	210	194	160	32	341	285	115	288	81	538	374	347	260

Source: NAPS website

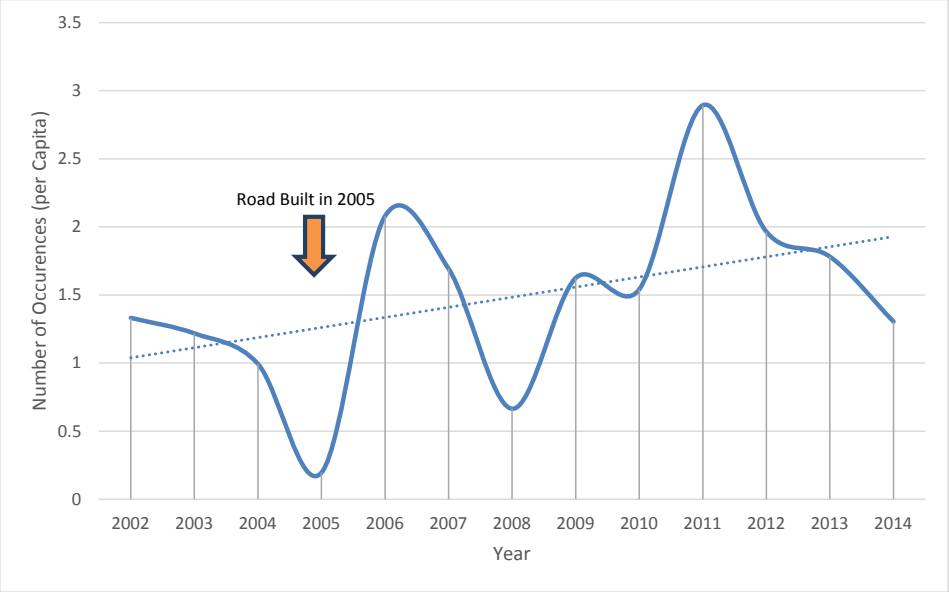

Figure 4-2: Slate Falls – Per Capita Crime Occurrences

Crime statistics over the time period of 2002-2014 has an overall upward trend, however there is a need to provide further context to these numbers. During conversations with NAPS representatives, it was learned that prior to 2008, crime statistics were manually entered into their systems and as such, the statistics quoted during this time may be understated. From 2008 onwards, statistics were more reliably generated through a new system, which can give the appearance of inflated crime statistics that could mistakenly be attributed to the construction of

the all season road. Further clarity could thus be provided by looking at the time period of 2002 to 2007; and 2008 to 2014 respectively.

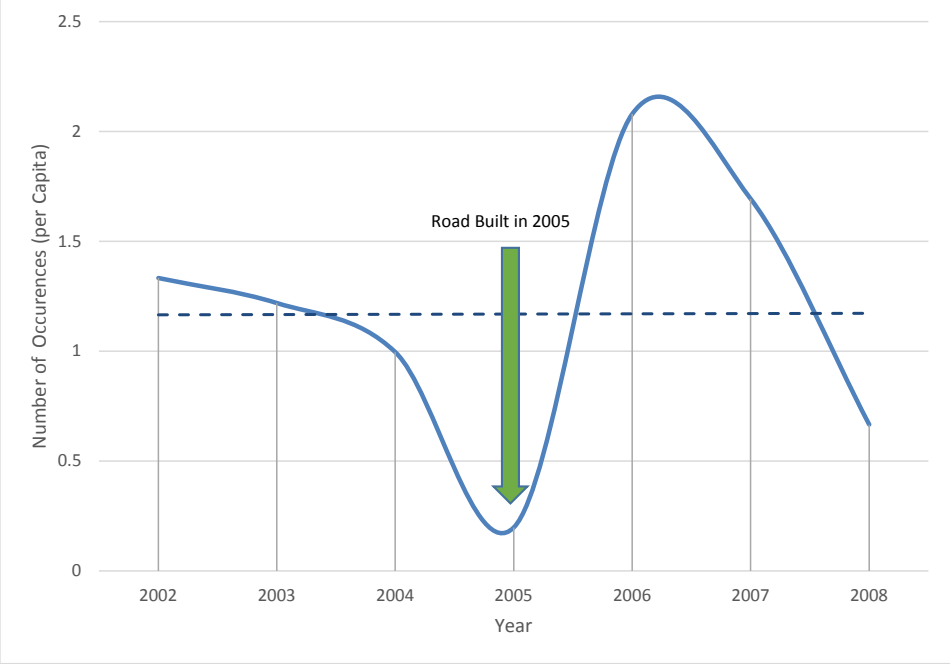

Figure 4-3: Per Capita Crime Occurrences (2002-2008)

This segment shows a much more level trend with an observable peak in 2006-2007 which would correspond the period directly following the all season road construction. However, Crime occurrences are seen significantly dropping in the following year. The period of 2009 to 2014 illustrates a downward trend in crime occurrences despite a peak in 2011.

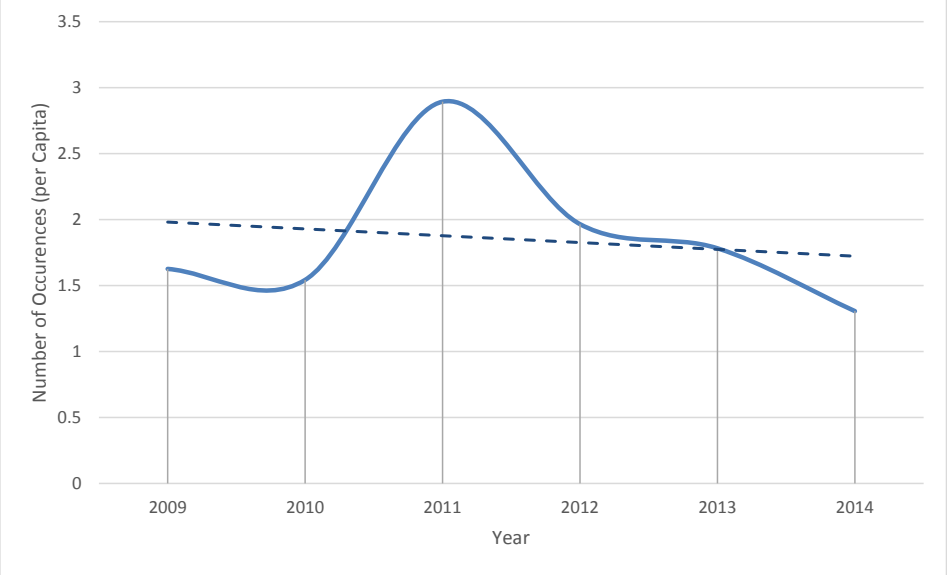

Figure 4-4: Per Capita Crime Occurrences (2009-2014)

4.7 Themes and Observations on Question 1 from Community Input

4.7.1 Commonly Identified Benefits and Concerns

Prior to conducting Round 3 of community engagement, the project team summarized both the good things and bad things about an all-season road in terms of which communities raised the specific issue/concern during Rounds 1 and 2, as well as whether the issue/concern was mentioned frequently or not frequently. Table 4-2 below shows the bad things that were raised.

Table 4-5: Community Identification of Good Things and Bad Things About an All-Season Road

Issue / Concern	Neskantaga	Webequie	Nibinamik	Eabametoong	Off-Reserve
Bad Things					
Loss of traditional values (i.e., language, reliance on land)	✓	✓	✓	✓	✓
More government regulation	✓	✓	✓	✓	
Less protection of traditional sites (i.e., burial grounds)	✓	✓	✓	✓	✓
More access to traditional lands by Non-First Nations people / resource companies without compensation to First Nations	✓	✓	✓	✓	✓
Food prices won't drop	✓				
Many community members would leave (particularly the youth)			✓		
Loss of remote status will reduce Ontario Works payments				✓	
Loss of remote status will reduce transfers to communities from federal and provincial governments				✓	
Increased access to substances	✓	✓	✓	✓	
Communities would be less secure				✓	
Economic development from road not sustainable / depends only on resource development	✓	✓	✓	✓	
Good Things					
Reduced reliance on government funding	✓				
Improved health care	✓	✓	✓	✓	✓
More educational opportunities/better chance of success in education	✓	✓	✓	✓	✓
Reduced freight costs	✓	✓	✓	✓	
Young people would feel less "trapped"	✓				
New business opportunities related to road	✓	✓	✓	✓	✓
Road corridor could accommodate power and broadband	✓	✓	✓	✓	✓
Employment and training opportunities during road construction and operations	✓	✓	✓	✓	
More contact with relatives in major centres and neighbouring communities	✓	✓	✓	✓	✓

During Round 3, community members were again asked to provide their input, having now received more information regarding the impact of a potential all-season road. The following additional concerns were identified:

- Reduction of remote status and the impact on Ontario Works benefits and community transfers. This issue became more prominent as members became more aware of its potential impact.
- Increased government regulation such as that related to enforcement of the HTA (i.e., licensing, vehicle registration and insurance).

- The road along will not bring prosperity. The road must be accompanied by economic development plans or other types of “road maps” or strategies in order to result in tangible benefits for community members.
- Liability for the road. Community members were concerned that responsibility for maintenance and operation of the road would entail liability and were concerned about their community taking on a share of this liability.

Additional benefits of an all-season road that were identified by community members during Round 3 were as follows:

- Lower freight costs
- Possibility of using the road corridor for both transmission and broadband

Round 3 Discussions with Youth

As part of the Round 3 meetings with youth in each community, attendees were divided into two groups to discuss Question 1 (Do the community members and communities support development of a community-based all-season road?) and Question 2 (If there is community support for an all-season road, where is the best location for the road corridor?). What emerged typically from each discussion were primarily lists of positive and negative aspects of the road.

Positive aspects of the road included:

- Better access to health care
- Reduced costs for supplies and services
- Wider variety and greater amount of food available
- More opportunities to obtain skills for better jobs
- A reduced/eliminated feeling of being “trapped”
- Employment opportunities associated with the road
- Cheaper travel
- More opportunities to visit family members in other communities
- More opportunities to return home/be visited by family from high school

Negative aspects of the road included:

- Traditional activities would be affected
- Increased access to substances
- Loss of comfort and security
- More opportunities for criminal activity (i.e., murders, kidnapping)

4.7.2 Towards Consensus

The general consensus on Question 1 (Should there be an all-season road?) was that the issue of where the road corridor should be and what we consider the “terms and conditions” of the road are separate activity streams that should move in parallel to each other. The planning process for the road could continue, but cannot advance to later development stages, such as detailed design, until the “terms and conditions” are met. By “terms and conditions”, this refers to the overarching, often mentioned issues surrounding the road, including:

- Environmental impacts
- Ownership of the road
- Regulation of the road
- Policing of the road
- Access and control over the road

5 Question 2: Where Should the All-Season Road be Built?

5.1 Factors to be considered in corridor selection

5.1.1 Terrain

One of the most significant cost factors in road construction is terrain type. This factor is comprised of a number of components including soil type and vegetation. Terrain type not only contributes to the positioning of the road corridor based on the terrain it would traverse, but also to construction planning, where issues such as proximity to aggregate sources come into play in estimating haulage costs associated with construction. Sources of information on terrain type include processed satellite information (i.e., Ontario Land Cover Classification) and surficial geology mapping. The role of soil type and vegetation is road corridor routing is described briefly below:

Soil Type - includes the physical properties of soil such as ability to drain and compactibility. These are significant cost factors in determining construction costs.

Vegetation - Vegetation plays a role in road construction by: (1) Helping to determine level of effort involved in clearing; and (2) Helping guide the position of the road corridor due to the significance of the role of vegetated areas as wildlife habitat.

5.1.2 Water crossings- number and width

Given the extensive drainage network covering the study area, crossing streams and rivers can have significant impact on road construction costs. Wider spans increase the requirement for in-water work such as installation of bridge piers that can have (usually temporary) impacts on fish habitat. Road corridors in the approach areas to bridge crossing need to be positioned so as to limit bridge span widths. Our project team, as part of its road corridor routing exercise, minimized both the number and width of water crossings in identifying the most suitable road corridors.

5.1.3 Traditional Knowledge

Traditional Knowledge

At project outset, SNC-Lavalin, as the consultant responsible for the study's technical component, signed non-disclosure agreements regarding traditional knowledge (TK) data with each of the First Nation communities involved in the project. This action was taken to ensure that no traditional knowledge data be shared with individuals or organizations not contractually involved in the project.

The TK data were collected from each of the communities and generalized through buffering to ensure that specific locations of traditional significance could not be identified. The project team's road corridor routing team used the data to a certain extent for basic routing purposes. Typically though, these data are more extensively used in subsequent stages of the all-season road development process to move the road centerline within a narrower corridor. Additionally, in subsequent phases, local community members are involved at the ground level to ground truth mapped locations.

5.1.4 Environmentally Sensitive Areas

The study area includes a number of environmentally sensitive areas that must be considered in the road corridor planning process. These considerations are applied at different stages of the planning process and the degree to which these areas are considered increases as the process progresses toward narrowing the width of the road corridor and more precisely positioning the road corridor. These include:

- Areas of significant fish habitat, such as spawning areas, especially in proximity to water crossing locations
- Areas where there is a presence of species listed under the Species at Risk Act, provincially listed species under Ontario's Endangered Species Act, as well as species listed by the Committee on the Status of Species at Risk in Ontario
- Areas with rare plant species

5.1.5 Regulated Areas

The study area contains a number of provincial parks, as well as provincially evaluated wetlands.

In terms of provincial parks, there are six classes of provincial parks, including:

- Wilderness
- Nature Reserve
- Cultural Heritage
- Natural Environment
- Waterway
- Recreational

The study area for the road study includes natural environment, waterway and nature reserve classes of provincial parks. With some limited exceptions, the following commercial activities are not permitted on lands that are part of a provincial park:

- Commercial timber harvest
- Generation of electricity

- Prospecting, staking mining claims, developing mineral interest or working mines
- Extracting aggregate, topsoil or peat
- Other industrial uses

A preliminary review of the study area indicates the presence of at least one evaluated wetland. An evaluated wetland is one that has been evaluated using the criteria outlined in the Ontario Ministry of Natural Resources and Forestry Ontario Wetland Evaluation System (OWES). As an evaluated wetland, it will have what is called a "wetland evaluation file". These files are collections of information about the wetland and can change as new information becomes available, such as confirmation of new species occurrences, boundary changes and changes to species status. Application of the OWES results in a ranking to determine whether the wetland should receive special protection as a "provincially significant" wetland (PSW).

5.2 Possible Environmental Effects of an All-Season road

In terms of the potential environmental impacts of a project, the environmental assessment process addresses this by looking at relevant ecosystem components (i.e., air quality), then evaluating each of these according to the likely physical extent of the impacted component, the duration of the impact, the frequency of the impact, the likelihood of the component be impacted and the significance of the impact after mitigation measures have been applied. Table 5-1 below describes those ecosystem components that would typically be assessed as part of an all-season road project.

Table 5-1: Potential Environmental Effects of an All-season Road

Ecosystem Component	Physical Extent	Duration (how long it lasts)	Frequency (how often it happens)	Probability (chances it could happen)	Significance of Effect/Impact after Mitigation
Air Quality					
Ambient air quality and dust deposition	Local	Construction and Operation	Not often (depends on how many vehicles use the road)	Will happen	Minor to Moderate
Climate Change					
Climate Change	Widespread	Construction and Operation	Not applicable	Possible	Minor
Noise					
Increased noise levels from vehicles	Local	Construction and Operation	Not often (depends on how many vehicles use the road)	Will happen	Minor to Moderate
Surface Water Quality					
Effects on quality of streams and rivers due to construction and use of the all-season road (dust, fuel spills, erosion, etc.)	Local/ Regional	Construction and Operation	Not often	Won't happen too much	Minor
Fish and Fish Habitat					
Increased dust emissions, erosion, fuel spills and sedimentation resulting in loss of or change to fish habitat or harm to fish from construction	Local/ Regional	Construction	Not often	Will happen	Minor to Moderate
In-stream construction activities resulting in loss of or change to fish habitat or harm to fish	Local/ Regional	Construction	Not often	Will happen	Minor to Moderate
Impact to habitat productivity and the quality of the fishery from construction	Local/ Regional	Construction	Not often	Won't happen too much	Minor
Vegetation					
Loss of typical plants and trees (good berry areas and medicine plant areas will be protected as no-go areas for construction)	Local	Permanent	Permanent removal in roadway, and periodic clearing for maintenance	Will happen	Minor
Wildlife					
Removal of plants and trees resulting in loss of cover and food for animals	Local	Permanent	Permanent removal in roadway, and periodic clearing for maintenance	Will happen	Minor
Effects of dust on animal health	Local	Construction and Operation	Not often (depends on how many vehicles use the road)	Will happen	Minor
Effect of traffic on animal feeding habits	Local	Construction and Operation	Not often (depends on how many vehicles use the road)	Will happen	Minor
Effects of noise and light on animal behaviour patterns	Local	Construction and Operation	Not often (depends on how many vehicles use the road)	Will happen	Minor
Loss of animal life from being hit by vehicles	Local	Construction and Operation	Not often (depends on how many vehicles use the road)	Will happen	Minor
Increased access for outsiders to hunt and fish causing lower populations	Local/ Regional	Construction and Operation	Not often in one area, but likely to happen more than today	Will happen	Minor

5.3 The Corridor Selection Process- Development and Refinement of the Corridor Options

Despite support for specific options in some of the communities, there were a number of common themes that emerged during community engagement that were common to all four communities and were considered in selecting a corridor option:

- Community members and leadership are very aware of, and generally supportive of, the northern termination of the all-season road corridor options at Webequie First Nation. The premise of this study at the outset was to prioritize "community service" rather than connection to the Ring of Fire deposits located to the east of Webequie First Nation. Connection to the Ring of Fire deposits is considered an "industrial road". This issue is complex and closely related to the questions of environmental and social impact; ownership; EA proponency; control of resource development; and the on-going revenue stream required to operate and maintain the all-season road.

- Almost all participants identified the importance of protecting sacred and historic sites; and environmentally sensitive lands. At this stage in the study it is too early to apply buffer distances around specific sites, given the 10 km width of the corridor study area. However, the environmental and Traditional knowledge database of such sites is comprehensive, and buffer distances can be applied in later stages of the study to prevent direct impacts to sensitive sites.
- Almost all participants agreed that protection of the environment (water, land, animals, fish, plants, etc.) is a very high priority.
- The all-season road should minimize distance and travel time (maximize access) between the four participating First Nations communities. This was a very common theme supported by many community engagement participants. In fact, Corridor Option 10, with no connection to the provincial highway system, was delineated, in response to a leadership suggestion, to focus attention on the interconnection between communities, rather than interconnection to service centres in the “south”.
- Although somewhat contradictory, most community members support the corridor with the shortest travel time from their community to Thunder Bay. Although some community members recognized benefits of connecting to the smaller centres of Sioux Lookout and Geraldton, many more participants were focused on connection to the many diverse services available in Thunder Bay.
- Many community members are familiar with soil conditions in their traditional territories and are aware that the all-season road would be easier and less costly to construct and maintain if it was located on well-drained soils (i.e., eskers). Community members in Nibinamik and Eabametoong First Nations independently identified esker locations and suggested that a road corridor be identified to maximize the use of the eskers.
- Despite the lower cost of constructing and maintaining the all-season road on well-drained soils, participating community members are aware that maximizing the use of eskers could add distance and travel time to inter-community travel. Very few community members identified cost savings as a priority over maximizing inter-community connections (minimizing travel distance) and minimizing environmental impacts.
- Community members and leadership support removing Options 2 and 3 from further consideration as they provide no advantages or benefits over other options and were not identified by any community members as a preferred Option.
- Most Nibinamik First Nation community members and leadership prefer corridor Options 6 and 7, both of which track an esker feature between the community and Pickle Lake and provide direct access (short travel distance to Webequie). This was identified though input from community members and leadership in the first round of community engagement. Not only is this considered the most suitable terrain for road construction, it is also considered to be the preferred alignment for future interconnection with the

neighbouring First Nations of Kasabonika and Wunnumin Lake. Opinion seemed to favour Option 7 (interconnection to Armstrong).

- Option 1 does not take advantage of the Ogoki (all-season) Road connection to Nakina and is not supported by Eabametoong members and leadership, having studied a direct connection to the Ogoki Road and Nakina in recent years. However, Option 1 has two distinct advantages over the similar Options 6 and 7, being lower capital and operating cost due to less overall road length, and fewer large watercourse crossings. Given these advantages of Option 1 it was retained for further comparison with the other Options.
- Options 4 and 5 are very similar to Options 8 and 9, except they do not provide connection to Pickle Lake and do not minimize travel distance between the four First Nation communities. They do not provide any other distinct advantages over options 8 and 9.
- In Round 2 of engagement, Eabametoong community members indicated they favour connection to Pickle Lake via the east-west esker. Together with input on eskers received from members of Nibinamik, Options 6 and 7 were created.
- Armstrong was identified as a possible interconnection option by community leadership in Round 2 of community engagement. However, some community members also see the advantage of a road connection to the Matawa “highway” communities and Geraldton via Nakina. It was generally agreed that a three point highway connection (Pickle Lake/Nakina/Armstrong) is preferred over the two point connection (Pickle Lake/Nakina only) and a one point connection (Option 1 only).
- In Round 3 of engagement, many community members in all communities recognized that Options 7 and 9 actually provide three connection points to the provincial highway system – a Pickle Lake connection, an Armstrong connection, plus a Nakina connection (via the Ogoki (all-season) Road. The other Options provide only 1 or 2 provincial highway connections – Option 1 connects only to Pickle Lake; Option 4 connects only to Nakina; Option 5 connects only to Nakina and Armstrong; and Options 6 and 8 connect only to Pickle Lake and Nakina.
- Many members of the Neskantaga First Nation showed support for Options 8 and 9 in that they provide the best connection to other First Nations with a similar travel distance to Thunder Bay. There did not seem to be overwhelming preference for either Option 8 or Option 9, although many participants identified the advantage of the 3-point connection provided by Option 8.
- Most Webequie participants indicated a slight preference for Options 6 and 7, in part to provide a shorter connection distance to Nibinamik, Pickle Lake and Thunder Bay, and also to provide a westerly point of connection for future connection by Kasabonika and Wunnumin Lake First Nations. There was some support for Options 8 and 9, in support of the maximum interconnection between the First Nations communities. Again, some members pointed to the benefits of a 3-point connection (Options 7 and 9).

From the input received from community members and Leadership, it is understood by the Study Team that although there was some consensus within communities, there are also a number of differing opinions about a preferred corridor option. It is clear that no option stands out as the most preferred by all of the members within a community or community members across all four participating communities. As with Question 1, no quantitative method was applied to count the number of community members supporting one Option or another.

Based on what the Study Team heard during the three phases of community engagement, no one Option is obviously preferred over any other Option. However, there was quite a bit of consensus amongst community members and leadership as to some important factors to consider in comparing the Options as well as which factors were consistently identified as being the most important to community members. These are described in the next Section.

5.4 Themes and Observations on Question 2 from Community Input – Towards Identification of a Preferred Corridor

The following sections describe the analysis of Options conducted by the Study Team, considering input from community members and leadership over the course of the three phases of community engagement, plus consideration of technical factors.

5.4.1 Step 1- Identification of the Corridor Options (Round 1)

Round 1 of community engagement focused on introducing the study to community members. A formal level of trust was established with community members through the signing of the Non-Disclosure Agreement regarding the traditional knowledge information. The project team emphasized to membership that we are working for them and this is a First Nation-led study that has been funded by the Provincial and Federal governments. The team described the technical considerations for choosing the best corridor for an all-season road, including type of land the road would go through, water crossings and financial considerations. In terms of community feedback, elders emphasized the need to respect traditional knowledge, culture and sacred areas in identifying potential corridors. Community members as a whole repeatedly stated that the corridor selection process needed to be community-driven and not influenced by existing all-season road corridors already proposed by resource companies. Consideration of a north-south (N-S) line via Armstrong as well as Nakina via a connection from Eabametoong, crossing the Albany River at Split Rapids and connecting to the existing Ogoki Road.

Once the Round 1 of community engagement had been completed the project team set out to develop alternatives for presentation and comment for Round 2. Five alternative road corridors were prepared. These alternatives were generated by following existing winter road corridors and including routes previously proposed by Noront and KWG Resources. These alternatives were developed to seed discussion and encourage the development of new corridor alternatives once community members were presented with something to respond to.

The options were as follows:

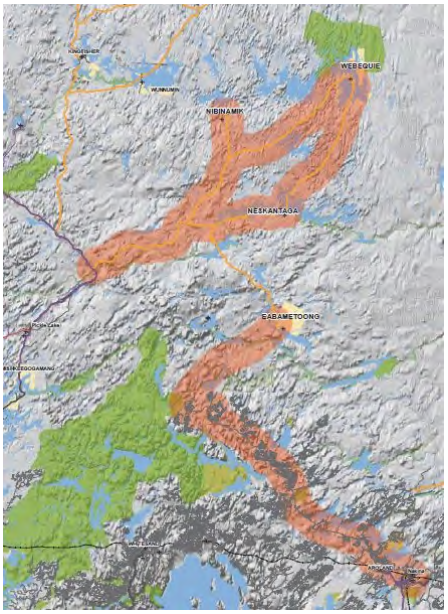
Option 1 East-West (E-W) Link to Pickle Lake

Characteristics of Option 1:

- 20 km wide band centred on the existing winter road
- Two alternatives to/from Webequie- northern (active) winter road and southern (inactive) winters road corridors
- Approximates corridor previously proposed by Noront Resources

All-Season Community Road Study

Option 2 E-W Link to Pickle Lake with Separate N-S Link to Nakina

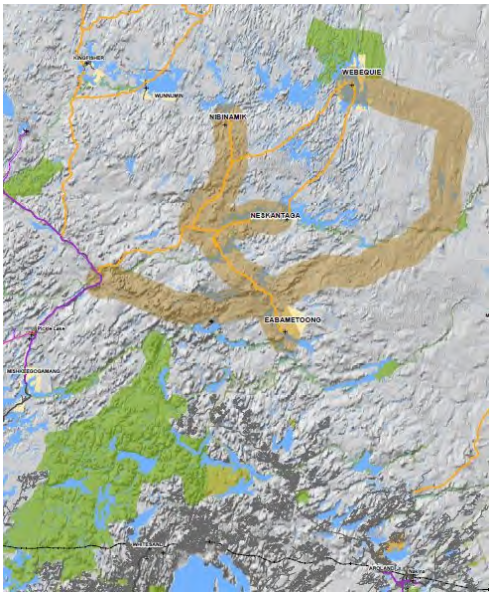


Characteristics of Option 2:

- Northern segment (connected to Pickle Lake) exactly the same as Option 1
- Additional separate connection from Eabametoong to Nakina via the Split Rapids Albany River crossing and connect to the network of existing resource roads/Ogoki Road

All-Season Community Road Study

Option 3 E-W Link to Pickle Lake/Webequie Connection to Trunk via Ring of Fire

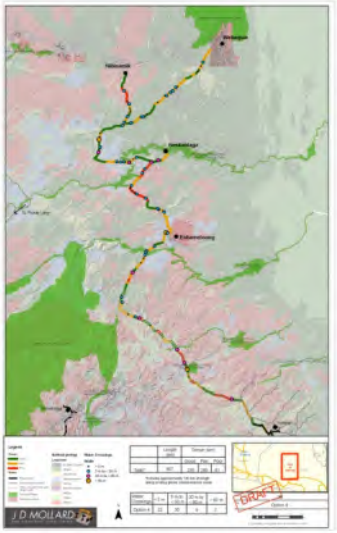


Characteristics of Option 3:

- E-W link to Pickle Lake
- Webequie connection to N-S trunk and Pickle Lake via Ring of Fire
- Previously proposed by KWG Resources

All-Season Community Road Study

Option 4 N-S Link to Nakina



Characteristics of Option 4:

- Follows 20 km wide corridor centred on the existing winter roads north of Eabametoong
- All communities connect through N-S trunk that connects to Nakina via Split Rapids crossing of Albany River and connection to network of existing resource roads/Ogoki Road

All-Season Community Road Study

Option 5 N-S Link to Armstrong

Characteristics of Option 5:

- Same as Option 4, links to Armstrong rather than Nakina via Split Rapids crossing of Albany River and connection to existing network of resource roads/Ogoki Road

5.4.1.1 Community Feedback in Round 2 on the Five Options Presented

There was overwhelming dislike for Option 3 given its extremely long connection between Webequie and the main trunk of the road notwithstanding its direct connection to the Ring of Fire.

Option 2 was generally not favoured due to the fact that it did not connect Eabametoong to the other three communities. Membership in all communities greatly valued connection with the other communities, as many had friends or relatives in these other communities and saw value in co-participation in traditional ceremonies and celebrations such as pow-wows.

Upon completion of Round 2 of community engagement, the project team refined the corridor options based on: (1) community feedback; and (2) technical analysis.

Community members clearly stated that they wanted to be connected with the other communities. Membership in Nibinamik suggested a different connection to Pickle Lake and

Webequie along eskers. Option 2 was eliminated by the project team because it did not connect all of the communities. Eabametoong membership suggested a connection to Pickle Lake via an esker that would help control construction costs. The community also suggested a review of previous routes assessed as part of a previous study conducted in 2001. As mentioned earlier, Option 3 was unanimously rejected by community members in all communities and was therefore officially removed as an option prior to Round 3.

Another suggestion tabled by Eabametoong was to focus initially on connecting the communities by minimizing travel distances. In a subsequent next phase, the community road system would be connected to the highway system.

5.4.2 Step 2 - Refinement of the Options (Rounds 2 and 3)

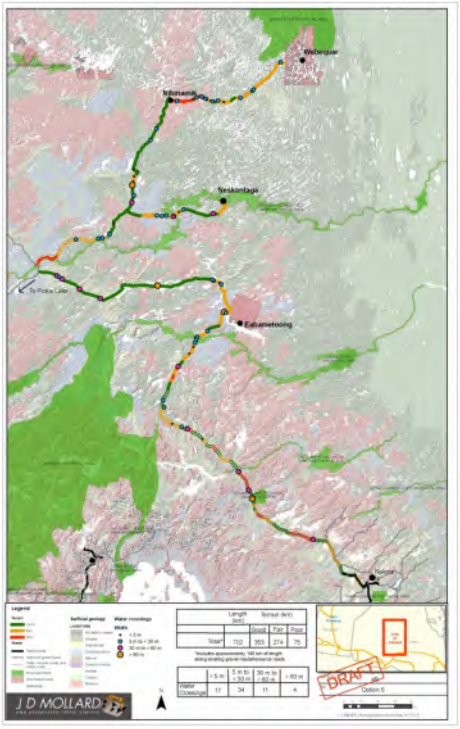
5.4.2.1 Technical Analysis

The project team conducted GIS-based terrain analysis to revise the corridor concepts presented in Round 2 by adding options in response to the suggestions of community team members. The road corridor width was reduced to 10 km from its original 20 km. Routing focused on seeking optimal terrain/soils for construction and minimizing the number and width of water crossings. Each corridor was characterized by distance in Good/Fair/Poor terrain and number of water crossings of the following spans: <5m, 5-30m, 30-60m, >60m. Key traditional knowledge sites were buffered as an initial constraint during the corridor selection process. A mentioned earlier, traditional knowledge data will play a more prominent role in the more precise positioning of the corridor should the communities choose to continue the all-season road corridor planning process.

A total of five new options were added for Round 3 of community engagement based on community input and each option was evaluated, as described earlier, with respect to type of terrain traversed along with corresponding number and width of water crossings. The five additional options were:

All-Season Community Road Study

Option 6

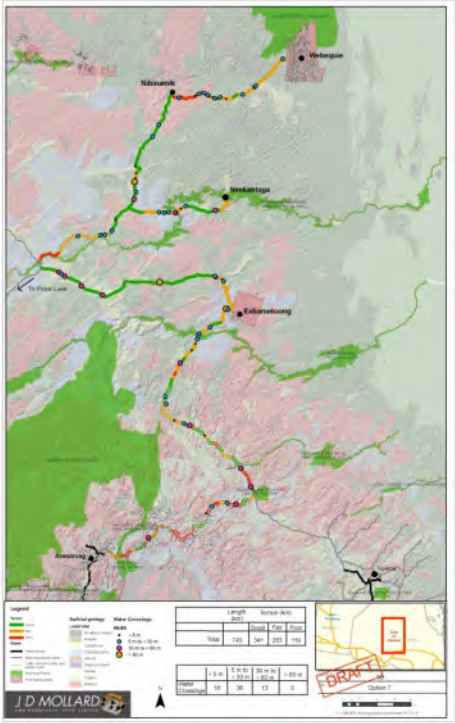


Characteristics of Option 6:

- Nibinamik to Pickle Lake along the ester, as suggested by community members
- Eabametoong to Pickle Lake along the esker
- Highway connections at Nakina and Pickle Lake

All-Season Community Road Study

Option 7

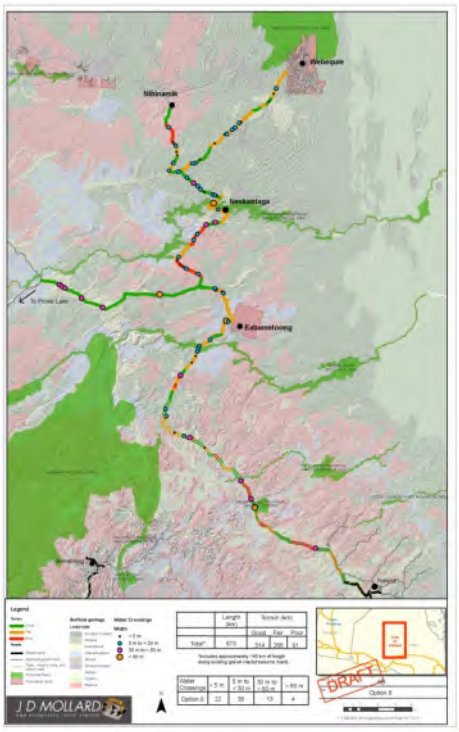


Characteristics of Option 7:

- Same as Option 6, except connections to Armstrong

All-Season Community Road Study

Option 8

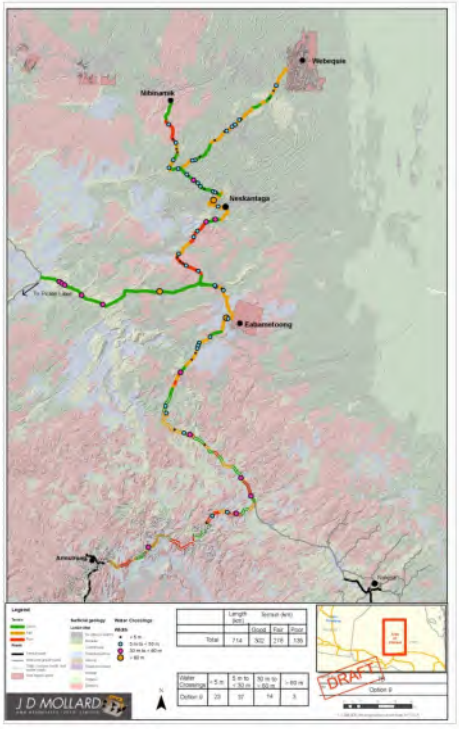


Characteristics of Option 8:

- Focused on maximizing community connections by shortening travel distances as much as possible, while balancing with construction cost factors of terrain type and number/width of water crossings
- Highway connections at Nakina and Pickle Lake

All-Season Community Road Study

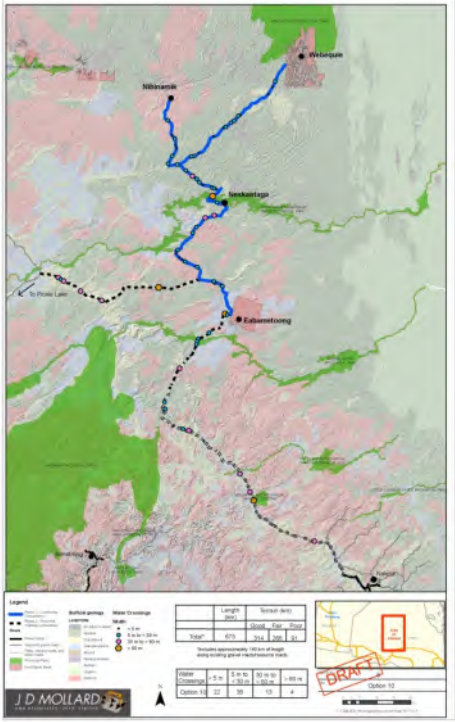
Option 9



Characteristics of Option 9:

- Same as Option 8, except the highway connection at Armstrong instead of Nakina

Option 10



Characteristics of Option 10:

- This is a two-phased option, beginning in the communities, then connecting to the highway system in a subsequent phase

5.4.3 Step 3 - Multi-Criteria Analysis

Given some of the differing priorities between the four communities and community members, it is unlikely that any one of the remaining 8 corridor options will be clearly supported by a majority of members within each community, or more challenging still, a majority amongst community members in all four communities. This would be a significantly challenging task to determine.

It is normal in a Study like this to use commonly understood methods for comparing Options when there are many factors to be considered and to reflect community input in defining the factors as well as how important the factors are in relation to other factors. It is common and commonly accepted to use a quantitative method to compare Options of any kind, especially infrastructure facilities, like a road where there are many complicated factors to compare across a number of varied Options. This type of analysis is called "multi-criteria analysis".

A "multi-criteria analysis was used by the Study Team to assist with identifying preferences among the Eight all-season road corridor Options being considered. The analysis is described in the following sections.

5.4.3.1 Factors Used in the Multi-Criteria Comparison of Corridor Options

A "multi-criteria analysis" method was used by the Study Team to examine and compare the corridor options using a number of factors. These factors came from community input in Rounds 1 through 3 of community engagement, as well as previous experience of the Study Team in comparing options for infrastructure. The number and type of factors to be applied were limited by the availability of data at this stage of the Project.

The factors or criteria selected are as follows:

- *Number of watercourse crossings greater than 30m in width*. This criterion represents the potential for impacts to water and fisheries, as well as challenges for construction and cost implications. The more crossings there are and the wider they are, the more chance there is of causing these impacts, and the higher the cost. However, cost is covered by other factors.
- *Percentage of higher quality terrain (good and fair soil types)*. This criterion reflects the degree of technical difficulty that there could be in constructing and maintaining the road, as well as being an indicator of how long the road will be in operation before major repairs are required. The higher the percentage of good and fair soils, the easier it will be to construct the road, the longer the road will last, and the better the option is considered to be.
- *Number of connections to the provincial highway system.* More connection points to the provincial highway system provide travelers more choice of places to go (destinations) and provide greater interconnection to more neighbouring communities and service centres.
- *Total combined distance between the First Nation communities.* Community members put high importance on the connection between neighbouring First Nation communities. The shorter the combined distance, the closer communities are to each other, the less time it will take to travel between the First Nations, and the greater the social and economic advantages of an option.

- *Total combined distance to Thunder Bay.* Community members put importance on shorter travel time to Thunder Bay. The shorter the combined distance (distance to Thunder Bay for all First Nations combined), the better the option is considered to be.
- *Construction costs (for a paved road).* The lower the cost the better. Lower costs will make it easier to fund and/or finance construction of the road.
- *Operations and maintenance costs.* The less it costs to operate and maintain the road every year after it is built, the better. Higher operating and maintenance costs require larger revenues to cover the costs.
- *Annual savings.* This is the amount of money that would be saved per year on freight haul compared to the winter road system. This factor takes into account the relationship between annual operations/maintenance costs and annual freight haul costs.

It is the opinion of the Study Team that these factors represent most of the considerations community members and Leadership wanted to be given in the comparison of Options, and with the level of detail that is available at this stage of the study process. They also include some typical technical factors to be considered. It is possible to add more factors, although not recommended that any of the suggested factors be dropped as they represent core elements of road corridor comparison.

5.4.3.2 Using the Factors to Compare the Options

Using the factors described above, the Study Team applied the information that had been collected throughout the identification and analysis of Corridor Options in this stage of the Project. Information for each Corridor Option was identified for each of the comparative factors or criteria.

The corridor Options were then ranked in order of preference based on this analysis. The results of this evaluation are shown on Table 5-2.

As shown in Table 5-1, by adding the rankings, Options 4 and 5 are tied as the highest rank options. However, Options 8 and 9 were a very close second (ranked 3rd due to the tie for 1st place).

All-Season Community Road Study

Table 5-2: Analysis and Ranking of Corridor Options (No Impact Scores and no weights Applied)

Factors	Option 1	Rank	Option 4	Rank	Option 5	Rank	Option 6	Rank	Option 7	Rank	Option 8	Rank	Option 9	Rank
Number of Water crossings bigger than 30m	5	1	10	2	11	3	13	4	16	6	15	5	17	7
% of high quality terrain (good and fair)	350	7	515	5	513	5	627	1	624	1	582	3	580	3
Number of connections to the provincial highway system	1	7	2	3	2	3	2	3	3	1	2	3	3	1
Total combined distance between FN communities	2146	3	2266	4	2266	4	2836	6	2836	6	1920	1	1920	1
Total combined distance to Thunder Bay	3312	7	3029	4	2859	2	3084	6	3042	5	2977	3	2806	1
Construction costs (Paved)(X $100M)	315	1	458	2	499	3	514	5	555	7	505	4	545	6
O&M Costs ($M/yr)	1.5	1	2.1	2	2.3	3	2.5	5	2.6	7	2.4	4	2.5	5
Annual Savings ($M)	5.3	2	5.3	2	5.4	1	5	6	4.9	7	5.1	5	5.2	4
		29		24		24		36		40		28		28
Rank	**5**		**1**		**1**		**6**		**7**		**3**		**3**	

The ranking for all Options using no weights or impacts scores, as shown on Table 5-2, is as follows:

Corridor Option	Rank (no weights applied)
Option 1	5
Option 4	1
Option 5	1
Option 6	7
Option 7	7
Option 8	3
Option 9	3

Although this comparison provides an interesting view of the Options, it is not considered valid to compare options by adding up the ranks as ranks do not have a quantitative value.

5.4.3.3 Weighting the Factors by Level of Importance

Because of that, the Study Team re-conducted the analysis using a more quantitative and defensible method to rank the Options. Also, the Study Team wanted to look at what happens if the factors are "weighted". "Weighting" means each factor is assigned a higher or lower level of importance by adding "weight". "Weighting" allows the Analysts to give more importance to some factors than others.

One set of "weights", or differences in levels of importance, was developed by the Study Team based on input received during community engagement with community members and Leadership ('Weighting 1'). A second set of weights was also applied in a separate comparison to examine the change in ranking if more importance is placed on costs while maintaining high importance on watercourse crossings and First Nations community interconnections ('Weighting 2').

The weights applied in the analysis are shown in Table 5-3.

Table 5-3: Assigned Weights

Factor	Community Input Weights (Weighting 1)	Weighting with costs higher in importance (Weighting 2)
Number of Water crossings bigger than 30m	10	10
% of high quality terrain (good and fair)	3	3
Number of connections to the provincial highway system	8	3
Total combined distance between FN communities	10	10
Total combined distance to Thunder Bay	8	4
Construction costs (Paved)(X $100M)	3	8
O&M Costs ($M/yr)	4	8
Annual Savings ($M)	6	8

5.4.3.4 Impact Scores

In order to apply weighting factors to the data presented in Table 5-1, the Study Team first had to create “impact scores”. Impact scores were assigned to each factor using ranges of data. This is done for two reasons:

- First, when conducting multi-criteria analysis, weights cannot be applied to ranks as ranks have no quantitative value. However, weighting factors can be applied to an impact score for purposes of ranking preferences. This is supported by many academic theories on multi-criteria comparison methods; and
- Second, impact scores help to reduce the exaggeration of small differences in data that should not affect ranking. For example, Option 7 requires 16 watercourse crossings that are wider than 30m. Option 9 requires 17 watercourse crossings greater than 30m. This is not considered a significant difference, so they are assigned the same impact score.

Impact scores were assigned as shown in Table 5-4:

Impact scores help the Analyst to categorize data into groupings or ranges. This is important because the differences in the data are not always that great and should not always be used to make significant distinctions between Options.

Table 5-4: Assigned Impact Scores

Number of Water crossings bigger than 30m	1 - 4 = 4	5-10=3	10-15=2	15-20=1
% of high quality terrain (good and fair)	300-400=1	400-500=2	500-600=3	600-700=4
Number of connections to the provincial highway system	1=1	2=2	3=3	
Total combined distance between FN communities	1500-2000=3	2000-2500=2	2500-3000=1	
Total combined distance to Thunder Bay	2750-2900=4	2900-3050=3	3050-3200=2	3200-3350=1
Construction costs (Paved)(X $100M)	300-400=4	400-450=3	450-500=2	500-550+=1
O&M Costs ($M/yr)	1.0 -1.5 = 4	1-5-2.0=3	2.0 to 2.5 = 2	2.5 - 3.0=1
Annual Savings ($M)	4.7 - 4.9=4	4.9 - 5.1=3	5.1 - 5.3 = 2	5.3 - 5.5 = 1

The application of the impact scores to the data is shown in Table 5-5.

5.4.3.5 Comparison of Options Using Impact Scores

For the second comparison of the Options, impact scores were assigned to each Factor or criterion, for each Option, using the ranges shown in Table 5-3. No weighting was added to the factors for this comparison.

Table 5-5 shows the results of this comparison.

All-Season Community Road Study

Table 5-5: Assigned Impact Scores and Ranking with no Weights ('No Weights')

Factors	Option 1 Data	Impact Score	Option 4 Data	Impact Score	Option 5 Data	Impact Score	Option 6 Data	Impact Score	Option 7 Data	Impact Score	Option 8 Data	Impact Score	Option 9 Data	Impact Score
Number of Water crossings bigger than 30m	5	3	10	3	11	2	13	2	16	1	15	2	17	1
% of high quality terrain (good and fair)	350	1	515	3	513	3	627	4	624	4	582	3	580	3
Number of connections to the provincial highway system	1	1	2	3	2	3	2	3	3	5	2	3	3	5
Total combined distance between FN communities	2146	2	2266	2	2266	2	2836	1	2836	1	1920	3	1920	3
Total combined distance to Thunder Bay	3312	1	3029	3	2859	4	3084	2	3042	3	2977	3	2806	4
Construction costs (Paved)(X $100M)	315	4	458	2	499	2	514	1	555	1	505	1	545	1
O&M Costs ($M/yr)	1.5	4	2.1	2	2.3	2	2.5	2	2.6	1	2.4	2	2.5	2
Annual Savings ($M)	5.3	3	5.3	3	5.4	4	5	2	4.9	1	5.1	3	5.2	3
TOTAL		19		21		22		17		17		20		22
RANK	**5**		**3**		**1**		**6**		**6**		**4**		**1**	

As shown in Table 5-5, Corridor Options were ranked as follows:

Corridor Option	Rank (no weights applied to Impact Scores)
Option 1	5
Option 4	3
Option 5	1
Option 6	6
Option 7	6
Option 8	4
Option 9	1

As shown in Table 5-5, Options 5 and 9 are tied for highest ranking (most preferred). Options 6 and 7 rank lowest and are therefore considered to be the least preferred.

5.4.3.6 Comparison of Options Using Impact Scores and Weighted Factors

For the third comparison of Options, the factors were given the weights shown in Table 5-3 for 'Weighting 1'.

As shown in Table 5-6, for 'Weighting 1', the highest level of importance is given to minimized travel distance between First Nations (the closer the First Nations are to each other, the better). High weight (high importance) was also given to the number of watercourse crossings as this represents potential for environmental impact. High weight was also given to the number of connections to the provincial highway system (the more the better); and distance to Thunder Bay (the shorter the travel time to Thunder Bay, the better).

The Study Team then compared the Options by applying the 'Weighting 1" weights to the impact scores for each factor (Impact Score X Weight). Results of the 'Weighting 1' comparison are shown on Table 5-5.

All-Season Community Road Study

Table 5-6: Comparison of Corridor Options Using Weights from Community Input (Weighting 1)

Factors Considered	Option 1 Impact Score	Weighted Score (Score X weight)	Option 4 Impact Score	Weighted Score (Score X weight)	Option 5 Impact Score	Weighted Score (Score X weight)	Option 6 Impact Score	Weighted Score (Score X weight)	Option 7 Impact Score	Weighted Score (Score X weight)	Option 8 Impact Score	Weighted Score (Score X weight)	Option 9 Impact Score	Weighted Score (Score X weight)
Number of Water crossings bigger than 30m	3	24	3	24	2	16	2	16	1	8	2	16	1	8
% of high quality terrain (good and fair)	1	3	3	9	3	9	4	12	4	12	3	9	3	9
Number of connections to the provincial highway system	1	10	3	30	3	30	3	30	5	50	3	30	5	50
Total combined distance between FN communities	2	20	2	20	2	20	1	10	1	10	3	30	3	30
Total combined distance to Thunder Bay	1	10	3	30	4	40	2	20	3	30	3	30	4	40
Construction costs (Paved)(X $100M)	4	12	2	6	2	6	1	3	1	3	1	3	1	3
O&M Costs ($M/yr)	4	16	2	8	2	8	2	8	1	4	2	8	2	8
Annual Savings ($M)	3	18	3	18	4	24	2	12	1	6	3	18	3	18
TOTAL		113		145		153		111		123		144		166
RANK	**6**		**3**		**2**		**7**		**5**		**4**		**1**	

As shown on Table 5-6, the corridor Options rank as follows:

Corridor Option	Rank (Weights from Community Input applied to Impact Scores 'Weighting 1')
Option 1	6
Option 4	3
Option 5	2
Option 6	7
Option 7	5
Option 8	4
Option 9	1

Option 9 ranks as most preferred with Option 5 ranking 2nd. Options 1 and 6 ranked as least preferred.

A fourth comparison was conducted to look at the effect of placing more importance on cost, while maintaining a high level of importance for watercourse crossings (environmental impact) and community interconnection (distance between the four First Nations). The weights that were applied to show this difference in importance are 'Weighting 2', as shown in Table 5-2. The results of this fourth analysis are shown in Table 5-6.

All-Season Community Road Study

Table 5-7: Comparison of Corridor Options Using Weights Favouring Cost and Community Connections (Weighting 2)

Factors Considered	Option 1 Score	Weighted Score (Score X weight)	Option 4 Score	Weighted Score (Score X weight)	Option 5 Score	Weighted Score (Score X weight)	Option 6 Score	Weighted Score (Score X weight)	Option 7 Score	Weighted Score (Score X weight)	Option 8 Score	Weighted Score (Score X weight)	Option 9 Score	Weighted Score (Score X weight)
Number of Water crossings bigger than 30m	3	30	3	30	2	20	2	20	1	10	2	20	1	10
% of high quality terrain (good and fair)	1	3	3	9	3	9	4	12	4	12	3	9	3	9
Number of connections to the provincial highway system	1	3	3	9	3	9	3	9	5	15	3	9	5	15
Total combined distance between FN communities	2	20	2	20	2	20	1	10	1	10	3	30	3	30
Total combined distance to Thunder Bay	1	4	3	12	4	16	2	8	3	12	3	12	4	16
Construction costs (Paved)(X $100M)	4	32	2	16	2	16	1	8	1	8	1	8	1	8
O&M Costs ($M/yr)	4	32	2	16	2	16	2	16	1	8	2	16	2	16
Annual Savings ($M)	3	24	3	24	4	32	2	16	1	8	3	24	3	24
TOTAL		148		136		138		99		83		128		128
RANK	**1**		**3**		**2**		**6**		**7**		**4**		**4**	

As shown in Table 5-7, results of the 'Weighting 2' comparison are as follows:

Corridor Option	Rank (High Weight on Cost, Water crossings And Community Interconnection; applied to Impact Scores; 'Weighting 2')
Option 1	1
Option 4	3
Option 5	2
Option 6	6
Option 7	7
Option 8	4
Option 9	4

Option 1 is ranked as the preferred option for this weighting scenario, with Option 8 ranking 2nd. Options 4 and 5 are lowest ranked.

5.4.3.7 Overall Comparison by Rankings

Rankings from all three comparisons of corridor options ('No weights with Impact Scores"; 'Weighting 1"; and Weighting 2') using the multi-criteria method of comparison, are shown on Table 5-8.

Table 5-8: Overall Ranking

Options	No Weights	Weighting 1	Weighting 2
Option 1	5	6	1
Option 4	3	3	3
Option 5	1	2	2
Option 6	6	7	6
Option 7	6	5	7
Option 8	4	4	4
Option 9	1	1	4

As shown on Table 5-7, Options 5 and 9 are most preferred (highest ranking) without applying weighting ('No weights'). Option 9 also ranks first when weights are applied to reflect community input ('Weighting 1'). Option 1 ranks highest with weights applied reflecting higher importance on cost, water course crossings and intercommunity connections ('Weighting 2').

Taking all three comparison scenarios into consideration, Option 9 wins two of the three comparisons ('No Weight' and 'Weighting 1'). Option 5 was highest ranked when there were no weights applied and ranked second when both sets of weighting are applied. Both options ranked below Option 1 when cost was given a higher priority ('Weighting 2'), with Option 1 ranked first. This is not surprising as Option 1 provides no interconnection from Eabametoong to Nakina or Armstrong, so it is less construction (lower cost). Option 1 also has the cost advantage of fewest watercourse crossings over 30m.

5.4.3.8 Comparison of Options 5 and 9

From the comparisons described in the sections above, Options 5 and 9 were the two most preferred options overall. Because they are close in preference, they were compared directly with no impact scores and no weights. Results of the "pair comparison" are shown in Table 5-9.

Table 5-9: Pair Comparison of Options 5 and 9

Factors	Option 5	Option 9	Winning Option
Number of Water crossings bigger than 30m	11	17	5
% of high quality terrain (good and fair)	513	580	9
Number of connections to the provincial highway system	2	3	9
Total combined distance between FN communities	2266	1920	9
Total combined distance to Thunder Bay	2859	2806	9
Construction costs (Paved)(X $100M)	499	545	5
O&M Costs ($M/yr)	2.3	2.5	5
Annual Savings ($M)	5.4	5.2	5

As shown on Table 5-8, both Options "win" an equal number of factors. From community input, the most important criteria are minimized distance between First Nations communities; shortest total distance to Thunder Bay and number of highway connection points. Option 9 "wins" all three of those factors. Option 9 is also slightly preferred when annual cost savings are considered. Option 5 "wins" the other factors, including lower number of watercourse crossings (lower environmental impact) and lower capital costs (less financing/funding required to build).

5.4.3.9 Overall Conclusion on Question 2

On balance it is difficult to select the preferred Option from the two Options without further analysis.

At a later stage in the study process, it might be worthwhile to conduct a little more analysis of the two most preferred Options and re-conduct the comparison. It will also be important to get more community input on the comparison of the two Options. After these activities are done, selection of a preferred Option will be more informed.

6 Question 3: Is there a business case for an all-season road?

This Section of the Report provides a discussion of the economic aspects of an all-season road compared to the existing haul system which includes the winter road system and air haul infrastructure. It is important for infrastructure planning purposes to know if an all-season road would result in economic benefits or costs over the existing system.

Comparing the two systems requires an understanding of the capital or construction costs to build an all-season road, as well as the annual operations and maintenance costs to maintain the system in proper condition. The analysis must also take into consideration haul costs of all freight that comes into the four First Nations.

The objectives of the cost estimating at this preliminary stage were to help with the following analyses:

- Development of costs for constructing and maintaining an all-season road for each of the road corridor Options under consideration for the purposes of comparison; and
- Comparison of the costs and benefits of each of the road corridor Options compared to the existing winter road and air haul system to determine the cost-benefit of an all-season road for freight haul.

A discussion of the comparison of the corridor Options, including the economics, is provided in Section 5.0. The discussion of general costs and benefits of an all-season road are provided in the following sections.

6.1 Initial Construction Costs

The scope of this preliminary feasibility study required that the Study Team prepare high level costing of the road corridor Options for comparison purposes, as described in Section 5.0 of this report. The following sections provide an overview of the economics of an all-season road and the economic input to the comparison of road corridor Options.

6.1.1 Pre-Feasibility and Class “D” Cost Estimates

An important aspect of the current Pre-Feasibility Study is to present a cost estimate for an all season road connecting the four First Nations of Nibinamik, Neskantaga, Webequie and Eabametoong. In response, the Study Team has conducted a very high level estimate of costs, typically referred to as “indicative” costs, which is somewhat equivalent to a Class “D” cost estimate. This means that costs are based primarily on unit rates from reliable published sources and previous experience.

Cost estimates were provided for:

- Capital (construction) costs
- Annual operations and maintenance costs
- Annual freight haul costs

Costs were estimated using a series of assumptions and relying on readily available published data. These are described in the following sections.

6.1.2 Construction Costs

Construction costs were primarily based on three factors:

- Soil type
- Type of Road (community road or industrial road)
- Watercourse crossing costs

Each is described in the sections below.

6.1.2.1 Soil Type

There are a number of general terrain conditions within the study area, including:

- Glaciolacustrine
- Till
- Organic Terrain
- Glaciofluvial
- Bedrock

These terrain conditions, together with water crossings, are the largest determinants in the calculation of all-season road construction costs. Described below is each of these conditions, with a short discussion as to suitability for roadbed foundation, including a classification of the terrain in terms of its suitability as a roadbed foundation as “Good”, “Fair”, or “Poor”. In addition, Appendix 9 Terrain Analysis Technical Brief provides further information.

Glaciolacustrine

These deposits consist of clay, silt and fine sand and are typically found in areas of flat to gentle topography. They are thicker in low areas and thinner on the tops of hills. Depending on the composition and location (i.e., low areas) of these deposits, they can be, very generally speaking, considered to be “fair” or “pair” roadbed foundation.

Till

Till is a disordered mixture of sand, silt, clay and boulders of glacial ice-laid origin. It is generally considered “fair” for use in roadbeds, but can be difficult to work with given the possibility of

encountering boulders, which require heavier equipment. Till drains well and is associated with a wide range of topography.

Organic Terrain

Organic terrain is typically comprised of peat, which is typically found in flat areas and likely ranges in thickness from less than 2 m to over 4 m (high water table areas) within the study area. Using peat as a roadbed foundation is difficult due to the uncertainty of its thickness and association with high water tables, making estimation of construction quantities challenging. In peat areas, due to the unavailability of dry borrow material, hauling of material across longer distances is required. It is generally considered "poor" for use as a roadbed.

Glaciofluvial

These are deposits of sand and gravel that are typically found in eskers, which are long ridges, or kames, which are hills or mounds. While not all of these features contain suitable material for construction, they typically are considered good roadbed foundation. These deposits are not evenly distributed across the study area, resulting in the possibility of longer haul distances in some areas.

Bedrock

These deposits are typically found on bumpy, elevated terrain and are either at or slightly below the surface. While these areas are a potential source of quarried aggregate or rock fill, they are considered "poor" areas in terms of suitability as a roadbed due to the likelihood of blasting being required as part of road construction.

Impact of Soil Type/Terrain on Construction Costs

As the terrain type degrades from "Good" to "Fair" to "Poor" according to the very general classification system used to quantitatively classify the terrain, construction costs increase in the following areas:

- *Material type and quantity*- backfill material is required in fair soils, while geogrid and geotextile are required in poor soils
- *Heavy equipment / operator time*- there is an increased use of heavy equipment as terrain becomes more difficult to construct in
- Labour- Additional effort is required as the terrain becomes more difficult to construct in

6.1.2.2 Industrial vs. Community Road Design

While this all-season road study is focusing on the road as a community road, in the event that the communities choose to consider its use for alternative industrial purposes as well, the

project team has prepared cost estimates reflecting such a scenario. Further information is available in Appendix 6 Engineering Technical Brief.

The essential difference in the construction of an industrial road vs. a community road is the requirement for the roadbed to withstand both a higher load/vehicle and a higher volume of vehicles. From a design perspective, this requires additional base course material and, as a result, more heavy equipment and operator time in order to handle the additional material.

6.1.2.3 Road surface type

During the Chiefs' meeting with the project team in March, 2016, where factors associated with construction costs were discussed, the project team was directed to investigate the cost of paving the all-season community road, as an alternative to a simple gravel road. Costs of a paved road are typically in the range of 25-30% more than a gravel road. These costs are attributable to:

- The need to construct a shoulder
- Higher material costs since asphalt is more expensive than the additional base course material required for a gravel road
- Higher equipment and labour costs primarily due to the fact that additional equipment (i.e., pavers) is required

6.1.2.4 Watercourse Crossing Structures (Bridges and culverts)

Our team of terrain analysts focused their road corridor routing efforts on maximizing quality of terrain to minimize construction costs, while minimizing the number and width of water crossings. Obviously, the wider the span across a watercourse, the greater the cost of a bridge or other type of crossing structure (i.e., culvert). Additionally, as the span of a crossing structure increases, so does the likelihood of the requirement for in-water works during construction such as piers. These works can, unless properly mitigated, have local or regional impacts on fish habitat. The terrain analysts identified the number and width of water crossings for each of the road corridor alternatives. These crossings were classified into the following general categories:

< 5 m
5 – 30 m

30 – 60 m
>60 m

In order to calculate watercourse crossing costs for each option, a representative cost for a watercourse crossing structure within each range was identified (assuming a higher end/more expensive type of structure within each range) and multiplied by the number of structures within that range.

6.1.3 Estimated costs by corridor alternative

Each of the corridor alternatives was evaluated for approximate cost of construction, again, using Class "D" cost estimates. These costs were a combination of:

- road construction costs
- watercourse crossing costs

6.1.3.1 Road construction

Road construction costs were derived from a combination of material, machine, labour and other costs such as those for clearing and grubbing, ditches, pavement marking and signage. These were estimated per km and included the cost of culverts every 200 m along the road. In addition, estimates were provided for both industrial roads and community roads, under scenarios of "Good", "Fair" and "Poor" terrain conditions (described earlier in the section), as well as with paved or gravel surfaces. Please refer to Appendix 6 Engineering Technical Brief-Road Construction Unit Costs for a detailed breakdown of the road construction cost estimates. Table 6-1 below includes the road construction cost estimates for each option evaluated.

Table 6-1: Road construction cost estimates for evaluated options

		Terrain (Good/Fair/Poor in km)										
Road Surface Type			Paved	Gravel		Paved	Gravel		Paved	Gravel		
Option	Length (km)	Good Terrain	Cost/km $603,001	Cost/km $494,668	Fair Terrain	Cost/km $698,625	Cost/km $532,363	Poor Terrain	Cost/km $929,076	Cost/km $807,337	Total Cost-Paved Road	Total Cost-Gravel Road
Option 1	418	150	$90,450,150	$74,200,200	200	$139,725,000	$106,472,600	68	$63,177,168	$54,898,916	$293,352,318	$235,571,716
Option 4	607	235	$141,705,235	$116,246,980	280	$195,615,000	$149,061,640	91	$84,545,916	$73,467,667	$421,866,151	$338,776,287
Option 5	648	223	$134,469,223	$110,310,964	290	$202,601,250	$154,385,270	135	$125,425,260	$108,990,495	$462,495,733	$373,686,729
Option 6	702	353	$212,859,353	$174,617,804	274	$191,423,250	$145,867,462	75	$69,680,700	$60,550,275	$473,963,303	$381,035,541
Option 7	743	341	$205,623,341	$168,681,788	283	$197,710,875	$150,658,729	119	$110,560,044	$96,073,103	$513,894,260	$415,413,620
Option 8	673	314	$189,342,314	$155,325,752	268	$187,231,500	$142,673,284	91	$84,545,916	$73,467,667	$461,119,730	$371,466,703
Option 9	714	302	$182,106,302	$149,389,736	278	$194,217,750	$147,996,914	135	$125,425,260	$108,990,495	$501,749,312	$406,377,145

6.1.3.2 Water crossing costs

As discussed previously in this section, watercourse crossing costs for each option were determined by identifying a representative cost for a watercourse crossing structure within each span range (assuming a higher end/more expensive type of structure within each range) and multiplying this figure by the number of structures within that range, as determined by the terrain

analysis. It should be noted that crossings < 5m were not included, as they had already been accounted for in the road construction costs that assumed a culvert every 200 m. Table 6-2 below includes the watercourse crossing estimates for each of the evaluated options.

Table 6-2: Road construction cost estimates for evaluated options

	Water Crossing Width						
Option	5 m to < 30 m	Cost/Crossing $750,000	30 m to < 60 m	Cost/Crossing $1,060,000	> 60 m	Cost/Crossing $1,580,000	Total Cost - All Structures
Option 1	30	$ 22,500,000	4	$ 4,240,000	1	$ 1,580,000	$ 28,320,000
Option 4	35	$ 26,250,000	9	$ 9,540,000	3	$ 4,740,000	$ 40,530,000
Option 5	37	$ 27,750,000	9	$ 9,540,000	3	$ 4,740,000	$ 42,030,000
Option 6	34	$ 25,500,000	11	$ 11,660,000	4	$ 6,320,000	$ 43,480,000
Option 7	36	$ 27,000,000	13	$ 13,780,000	3	$ 4,740,000	$ 45,520,000
Option 8	35	$ 26,250,000	13	$ 13,780,000	4	$ 6,320,000	$ 46,350,000
Option 9	37	$ 27,750,000	14	$ 14,840,000	3	$ 4,740,000	$ 47,330,000

6.1.3.3 Total Construction/Capital Costs

Total construction costs were determined through the addition of road construction and watercourse crossing costs and were prepared under paved and gravel surface scenarios. Table 6-3 below displays the total construction costs.

Table 6-3: Total construction cost estimates for evaluated options

Option	Paved	Gravel	Water Crossings	Total Cost- Paved	Total Cost- Gravel
Option 1	$293,352,318	$235,571,716	$28,320,000	$321,672,318	$263,891,716
Option 4	$421,866,151	$338,776,287	$40,530,000	$462,396,151	$379,306,287
Option 5	$462,495,733	$373,686,729	$42,030,000	$504,525,733	$415,716,729
Option 6	$473,963,303	$381,035,541	$43,480,000	$517,443,303	$424,515,541
Option 7	$513,894,260	$415,413,620	$45,520,000	$559,414,260	$460,933,620
Option 8	$461,119,730	$371,466,703	$46,350,000	$507,469,730	$417,816,703
Option 9	$501,749,312	$406,377,145	$47,330,000	$549,079,312	$453,707,145

6.2 Initial Operating and Maintenance Costs

Total road maintenance costs were generated per km for each of the evaluated corridor options and are included in Table 6-4. The costs, as detailed in Appendix 6 Engineering Technical Brief- Road Construction Unit Costs, were prepared for gravel and paved surface scenarios, as well as summer and winter seasons. Maintenance cost estimates were based on a new to medium-aged road, given that maintenance costs become less predictable and can increase substantially beyond this point.

Table 6-4: Road maintenance cost estimates for evaluated options

Option	Length (km)	Maintenance Cost ($/km)	Total
Option 1	418	$3,500	$1,463,000
Option 4	607	$3,500	$2,124,500
Option 5	648	$3,500	$2,268,000
Option 6	702	$3,500	$2,457,000
Option 7	743	$3,500	$2,600,500
Option 8	673	$3,500	$2,355,500
Option 9	714	$3,500	$2,499,000

6.3 Freight Haul Costs

Due to seasonal access to the four First Nations communities via the winter road, freight costs have been predictably high. A large percentage of goods are brought into these communities through air transportation, which is significantly more expensive than truck transportation. Construction of an all season road will allow a higher percentage of freight into the communities to be done via trucks and cars, which would lead to significant savings in freight costs.

6.3.1 Calculating the Costs of Freight Haul

Freight costs were estimated by applying industry standard assumptions (as summarized in Appendix 7) for the main criteria in estimating freight costs. These assumptions included per capita freight requirements, as well as cost per tonne kilometer for Air, car and truck transportation.

Under the current scenario, the distribution of freight methods is summarized in the below chart.

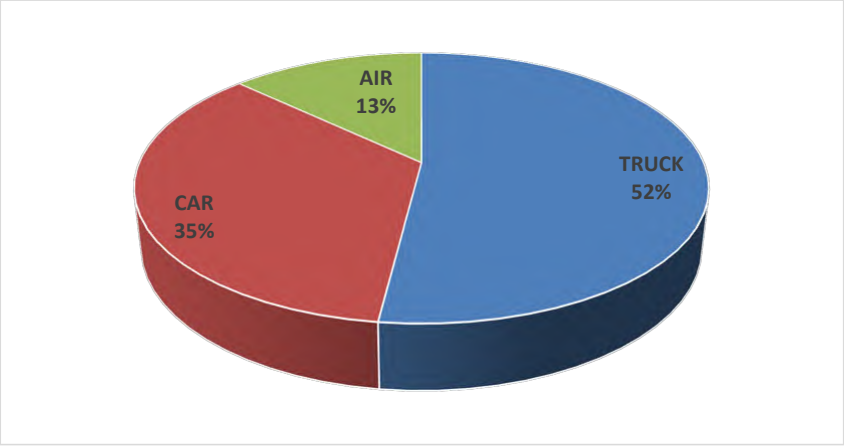


Figure 6-1: Modal Share - Base Scenario

Construction of the all season road will significantly reduce the proportion of air and car transportation. The proportion of truck transportation increases as the all season road will facilitate large freight trucks to travel to each of these four communities throughout the year more efficiently than a car and much more cheaply than air transportation. This new distribution is illustrated in the below figure.

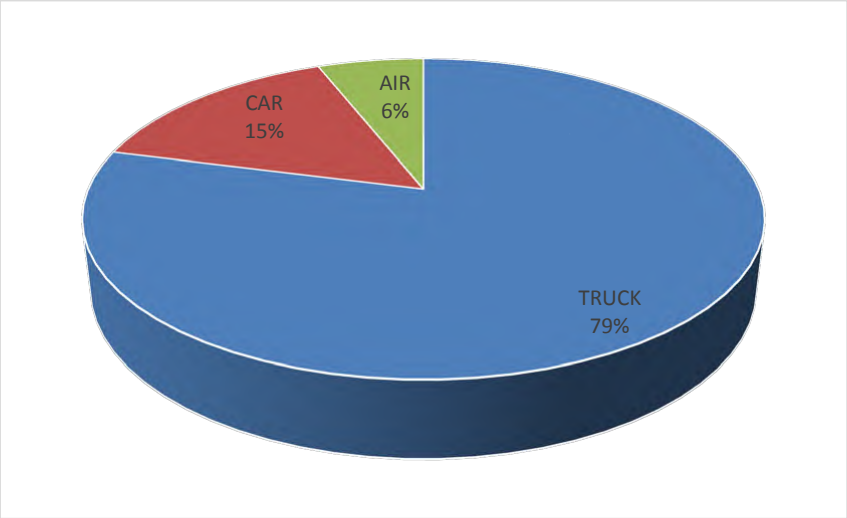

Figure 6-2: Modal split with All Season Road

By applying the assumptions made regarding cost of each mode of transportation to the respective modal splits, potential savings in freight cost have been calculated. The summary results are outlined in the table below.

Table 6-5: Freight Cost per Option

OPTION 1							
Option	**Population - Excludes Off Reserve (AANDC)**	**Distance to Thunder Bay (by air)**	**Distance to Thunder Bay (Winter Road)**	**Distance to Thunder Bay (ASCR road)**	**Freight Costs (Base Case)**	**Freight Costs (with ASR)**	**Total Savings**

6.3.2 Comparison of Winter Road System (Existing) and All-season road

Maintenance costs for the all season road will carry a higher cost per kilometer as well as require cover a greater length in each investigated option. As a result, maintenance costs will be significantly higher than those for the Winter Road, which covers a shorter length and is less than half the per kilometer cost. The additional maintenance costs are illustrated in the table below.

Table 6-6: Winter Road vs. All Season Road Maintenance

Option	Winter Road Length (km)	All Season Road Length (km)	Additional Annual Maintenance Cost
Option 1	397	418	$801,724
Option 4	397	607	$1,164,226
Option 5	397	648	$1,242,864
Option 6	397	702	$1,346,436
Option 7	397	743	$1,425,074
Option 8	397	673	$1,290,814
Option 9	397	714	$1,369,452

Winter Road Maintenance Cost ($/km)	$1,582
All Season Road Maintenance Cost ($/km)	$3,500

6.4 Other cost factors

Consultation activities have revealed that concern exists related to the community transfer payments that each of the First Nation communities will receive from AANDC and any changes in benefits that will be received through Ontario Works.

6.4.1 Community transfer payments

The AANDC Funding Formula is dependent on the following factors:

- Population according to place of residence (on-reserve and off-reserve population) as of December 31 of each year;
- Total number of cases per month in the income security program;
- Number and value of federal, provincial, and territorial agreements;
- Value of major capital projects;

- Number of specialists required to deliver the services funded by the department (person years);
- Type and value of the basic services funded by the department (e.g. lands and trust services, education, income support, economic development, infrastructure, minor capital projects, band management, advisory services); and
- Geographic index (location based on remoteness and environmental conditions).

Development of an All Season Community Road ensures that the geographic Index will be altered. Changes in Geographical Index will form the basis of all changes in AANDC funding for each of the four First Nation communities through the funding formula.

The Geographical Index is comprised of 3 factors. These are:

- **Zone** – This is dependent on year round road access and distance to nearest service centre;
- **Index** – Relates the geographic location of a First Nation to the local climate; and
- **Sub Zone** – Applicable only in cases with no year round road access. This describes the distance from the nearest service centre.

The current Geographical Indices for the four communities are described below:

Table 6-7: Current Geographical Index

	Current Scenario		
	Zone	Index	Sub zone
Eabametoong (Reserve No. 183 / Classification 4C2 / Service Centre: Geraldton)	4 - No year round road access to service centre	C - 50 degrees latitude <= geographic location < 55 degrees latitude	**2** 160-240 km from service centre
Nibinamik (Reserve No. 241 / Classification 4C6 / Service Centre: Geraldton)	4 - No year round road access to service centre	C - 50 degrees latitude <= geographic location < 55 degrees latitude	**6** More than 480 km from service centre
Neskantaga (Reserve No. 239 / Classification 4C3 / Service Centre: Geraldton)	4 - No year round road access to service centre	C - 50 degrees latitude <= geographic location < 55 degrees latitude	**3** 240-320 km away from service centre
Webequie (Reserve No. 240 / Classification 4C4 / Service Centre: Geraldton)	4 - No year round road access to service centre	C - 50 degrees latitude <= geographic location < 55 degrees latitude	**4** 320-400 km away from service centre

Development of the All Season Community Road will alter the classifications as follows:

Table 6-8: Geographical Index - with All Season Road

	With All Season Community Road		
	Zone	Index	Sub zone
Eabametoong (Reserve No. 183 / Classification 4C2 / Service Centre: Geraldton)	2 - Located between 50 and 350km from nearest service centre with year round road access	C - 50 degrees latitude <= geographic location < 55 degrees latitude	**N/A**
Nibinamik (Reserve No. 241 / Classification 4C6 / Service Centre: Geraldton)	3 - Located over 350 km from nearest service centre with year round road access	C - 50 degrees latitude <= geographic location < 55 degrees latitude	**N/A**
Neskantaga (Reserve No. 239 / Classification 4C3 / Service Centre: Geraldton)	2 - Located between 50 and 350km from nearest service centre with year round road access	C - 50 degrees latitude <= geographic location < 55 degrees latitude	**N/A**
Webequie (Reserve No. 240 / Classification 4C4 / Service Centre: Geraldton)	3 - Located over 350 km from nearest service centre with year round road access	C - 50 degrees latitude <= geographic location < 55 degrees latitude	**N/A**

Discussions with INAC representatives have outlined that through the funding formula, the geographical classification changes will result in changes in funding levels. Discussions should be undertaken by the financial officer from each of the First Nations with their respective funding agent to determine the extent to which these changes will occur. There may be no immediate changes in funding after construction of the all season road if the “cost dependent costs” as defined by the AANDC funding formula do not significantly change as a result of the road’s construction.

6.4.2 Ontario Works

There has been concern among community members that by losing remote status, certain members may have alterations to their Ontario Works benefits. The Ontario Works Directives are written, “remote” is defined as “North of the 50th parallel and is without year-round road access”.

Through consultation with Ontario Works representatives, there has been consensus that payment may not change after discussions between the First Nation community and Ontario Works. This is due to the acknowledgement that construction of the all season road does not necessarily result in an immediate reduction in the cost for goods and services within the communities. However, it is expected that prices will gradually go down and through discussions with Ontario Works, payments could be kept as is until the local economy adjusts.

Ontario Works benefits for areas with remote status, as well as non-remote status are summarized below.

Table 6-9: Ontario Works Summary Table

Ontario Works Benefits							Percentage Change (no spouse included in benefit)	Percentage Change (spouse included in benefit)
Basic Needs			Remote Status		Non Remote Status			
Number of Dependents other than Spouse	Number of Dependents (Aged 0-17)	Number of Dependents 18 years or older	Recipient (no spouse included in benefit)	Recipient (spouse included in benefit)	Recipient (no spouse included in benefit)	Recipient (spouse included in benefit)		
0	0	0	$518	$785	$305	$468	-41.12%	-40.38%
1	0	1	$684	$856	$342	$468	-50.00%	-45.33%
1	1	0	$931	$1,004	$589	$616	-36.73%	-38.65%
2	2	2	$753	$929	$342	$468	-54.58%	-49.62%
2	1	1	$1,000	$1,077	$589	$616	-41.10%	-42.80%
2	2	0	$1,148	$1,241	$737	$780	-35.80%	-37.15%

Notes:

1) For each additional dependent 0-17 years of age, benefit is $73 per dependent without the All Season Road, and $0 with the All Season Road

2) For each additional dependent of 18 years of age or older, benefit is $238 per dependent without the All Season Road, and $165 with the All Season Road

6.5 Conclusions on Business Case

The economic analyses for the all-season road were conducted at a high conceptual level, relying primarily on the extrapolation of data from published information sources. The level of analysis is equivalent to a Class "D" indicative estimate. Much more detailed analyses are required in the next stages of the study to provide more accurate estimates for determining the economic feasibility of an all-season road.

For this study, the indicative costs were used to to provide an initial indication as to the costs and benefits of an all-season road compared to the existing system of winter roads and air haul (preliminary business case); and as input into the comparison of the road corridor options, as discussed in Section 5.0.

As discussed in Section 6.5, analyses were conducted to understand, at a preliminary level of detail, the costs and benefits of an all-season road compared to the existing system of winter roads and air haul infrastructure.

Based on these preliminary analyses, several conclusions can be made:

- Annual maintenance and operations costs for an all-season road can be expected to increase by as much as 100%, which is approximately double the cost of maintaining the winter road system. This is primarily due to the fact that the all-season road will be maintained for 12 months of the year as compared to the seasonal operation of the winter road system, which, at best would be 3 months of the year.
- The volume of freight haul that has to be flown into the communities by air can be expected to drop by as much as 50% once an all-season road is in place. It is expected there will be a similar drop in family car haul as goods and supplies will be more available in the communities. Truck haul volumes can be expected to increase by 50%.
- Annual freight haul costs of an all-season road are expected to drop by over 100% for all communities, providing a combined annual savings for all communities of approximately $7 million.
- Combining the increase in annual operations/maintenance costs of the all-season road with the savings in freight haul costs, the economic advantage of the all-season road (Option 9) will be a combined $5.2 million annually for all four communities combined.
- The annual savings on freight haul will primarily benefit the provincial and federal governments as diesel fuel and building materials, both of which are subsidized, represent the largest volume of annual haul.
- Ontario Works payments to First Nations families may decrease as a result of the loss of "remote" status. The amount of the reduction cannot be estimated accurately at this stage in Project development.

- Provincial and federal transfer payments on community operating costs can be expected to be reduced. The amount of the reduction cannot be estimated accurately at this stage in Project development.
- The all-season road is expected to result in other indirect economic benefits resulting from increased opportunities for economic development. The significance of this benefit cannot be determined at this stage in Project development.

Overall, it is expected that the all-season road will result in a net increase in economic benefits, although annual maintenance costs will be higher than for the winter road system. At this preliminary level of analysis, the economic benefit of reduced freight haul costs is estimated to off-set the increase in annual maintenance costs. At this stage in Project development it is uncertain what the source of revenue for the increased annual maintenance costs will be. Although the provincial and federal governments can both be expected to experience reduced costs as a result of the reduction in freight haul cost subsidies for fuel and building materials, it is not certain whether these reductions can be applied to the increase in maintenance costs. Further analysis and discussion with government agencies is required.

In the event that the all-season road results in an increase in economic activity in the Region, there could be an opportunity to derive revenue to cover increased maintenance costs from private sector road-users in the form of tolls or other levies. For example, if the all-season road facilitated the development of mining resources in the Ring of Fire area (or any other area which is now more accessible), a toll or fee could be charged to the mine operator(s) for use of the road to haul ore and supplies. The administrative arrangements for this type of levy, as well as the governance structure for road operation will have to be examined in later stages of Project development before options for this type or revenue generation can be better understood. Consideration could also be given to some type of private-public partnership (P3). There are many variations of this type of arrangement that would have to be analyzed.

An indirect benefit of the increase in maintenance costs is the expected increase in employment and overall annual family income, moving from a seasonal operation to a full-time operations program. In addition, although estimates have not been provided at this stage in Project development, employment and family income would also be expected to increase with an increase in the level of economic development that would be expected to result from improved access to supplies and markets, and an increase in travel between the communities and to regional service centres.

7 Conclusions

The following section provides a summary of the key conclusions the Study Team has interpreted from the community engagement process. These conclusions may not be agreed to by everyone. It should also be recognized that these conclusions are drawn from the community members that actually participated in community engagement sessions.

7.1 Question 1 – Should there be an all-season road?

The question of whether there should be an all-season road or not has to be addressed first by each community member, then as a community together, and finally across the four communities that have participated in the Study.

Whether there is consensus on “yes” or “no” is difficult to know without doing a formal poll or vote or referendum, etc. In fact, there were different opinions on how the community members should be asked the question. This issue has not been addressed. There are still many different opinions about the best method to find out the opinion or consensus of all community members.

Because no formal process for determining “consensus” was agreed to within each community and across the four communities, the answer to Question 1 is “no clear answer at this time”.

However, even though there was no formal method for finding out how much support there is in each community for an all-season road, doesn’t mean we didn’t hear many of the people who participated saying the same thing during community engagement meetings. And it also doesn’t mean that the community members were giving direction.

7.1.1 What did Community Members Say?

Some of the most common opinions we heard during the discussion of Question 1 are:

- Elders and many other community members are concerned about how an all-season road might affect traditional aboriginal culture and tradition. Preservation of culture and tradition is considered important to almost all participating community members. However, opinions were mixed as to whether the road itself would cause negative changes to culture (i.e., erosion of language and traditional pursuits), or whether improved access to training and employment and economic development in the communities would revive the sustainable economics of the communities.
- Many community members and leadership have a number of questions about ownership and control of the all-season road, including options for funding and/or financing capital costs and revenue stream for operations and maintenance. Many were also asking questions about the potential for partnering -- amongst themselves (the participating

communities); with government and/or with the private sector. Community members and leadership are extremely aware of the potential risks of taking on too much financial responsibility. At the same time, many community members, elders in particular, caution that if the First Nations do not take control of all-season road development, others will.

- On a related issue, many community members and leadership of all four communities are concerned about the long-term management of resource development. Community members feel they should have more involvement in decisions concerning the development of resources that are made more accessible by the all-season road. They also feel they should have some control over the use of traditional lands for hunting, trapping and fishing, by "outsiders".
- Leadership in particular has a number of questions and issues regarding "proponency" for an EA process (should the planning process go that far). Again, issues of governance and risk and potential partnering were common.
- There was general agreement amongst community members that neither families nor the community should have to face financial penalties if an all-season road is built. This means there has to be a way to overcome lost community-level and family level income as a result of loss of "remote community status". This issue is discussed in detail in Section 7.4.
- Most community members were in support of the economic benefits that could be realized with development of an all-season road; in particular the potential for lower retails prices, increased opportunity for economic development and cost savings to travel out of the community.
- Most community members are supportive of the increased access to training and employment opportunities as well as health facilities/treatment. Many community youth are interested in direct employment during construction and operation of the road.
- Most community members support the opportunity for increased access to neighbouring First Nations communities. This was considered a top priority when considering road corridor alternatives.
- Most community members had questions about the type, duration and significance of potential environmental, social, cultural and economic impacts. More study is required to provide detailed answers to most of these questions.
- We need to take control of the all-season road; both the process to plan for the road, as well as construction and operation of the road. If First Nations do not take control, an "outside" group like government or industry, or both, will try to take that control and build the road in a way that First Nations do not agree with.
- An all-season road is about providing a future for the youth and future generations.
- An all-season road can introduce "outsiders" to traditional territories and family lands. If there are no controls, "outsiders" could over-hunt and over-fish the land and make it

difficult for First Nations to enjoy the same access to the land that they have had for thousands of years.

It is the Study Team's observation that community members are thinking about both the "good" things an all-season road can bring, as well as the "bad" things. It's about considering the balance of the good things and the bad things. If someone feels there are more good things than bad things, they might prefer to support an all-season road. Other community members may feel that the bad things outweigh the good things and may not support the all-season road.

Many people realized that there is no clear answer of "yes" or "no" to an all-season road at this time. Many community members told us that more information is required before they can determine their opinion on the balance of good and bad things. It was generally recognized that this is a complicated decision that will have important implications for the future of the communities.

7.1.2 Overall Conclusion on Question 1

Overall, the Study Team concludes on Question 1 that even though some participating community members were fairly certain that they do or do not support an all-season road, many more participating community members told us they feel that more information is required on issues such as governance, ownership and control, environmental and social impacts, etc., before they are comfortable making a decision about whether they support an all-season road or not. Given the amount of information and issues involved as well as specific groups directly impacted by the road options, community members required more time for discussion and deliberation. Lastly, there was an identified need for discussions between communities when determining routes and impacts, which the project budget and scope did not take into consideration.

Although this conclusion is not made as a result of a vote or any other formal "counting" method, it was fairly clear to the Study Team that most people are not ready to make a final determination in support or not in support of an all-season road. Many people made it clear that the study process should continue in order to provide more information.

7.2 Question 2 – What is the best location for the all-season road?

The process for determining road corridor alternatives, as well as the process for evaluating corridor options is described in Section 5.0. The following conclusions are drawn from the opinions of community members that attended the community engagement sessions, as interpreted by Study Team members.

Community members that participated in community engagement meetings tended to be very interested in discussing road corridor options. Community participation resulted in the identification of road corridor options as well as variations on corridor options. A number of

communities have conducted previous studies on all-season road corridor options, as recently as three years ago for Eabametoong First Nation. Nibinamik First Nation also previously conducted road corridor studies. As a result, these communities had a number of specific suggestions for corridor options.

7.2.1 What Did Community Members Say?

During the three Rounds of community engagement, community members and leadership gave the Study Team a lot of input on the road corridor Options, both suggestions for creating Options and factors to consider in the comparison of corridor Options. There were a number of varying opinions on preference for a specific road corridor option, with no apparent agreement or consensus within each community or across communities on any one particular corridor Option, due to lack of time and inter-community discussions required to engage the impacted members as well as achieve consensus on preferred routes within shared territory.

As with Question 1, the Study Team did not undertake any quantitative methods to count the number of participants in favour of the various Options, such as polls or votes. Leadership of the four communities are still discussing how best to get that input at the appropriate time. That is not likely to be before this phase of the Project is completed.

Although there was no consensus on a preferred corridor Option during the community engagement events, community members and leaders did provide a lot of input on the types of issues that should be addressed in identifying and comparing road corridor options. Some of the opinions were a common theme amongst community members in all four First Nation communities:

- Almost all participants identified the importance of protecting sacred and historic sites; and environmentally sensitive lands. At this stage in the study it is too early to apply buffer distances around specific sites, given the 10 km width of the corridor study area. However, the environmental and Traditional knowledge database of such sites is comprehensive, and buffer distances can be applied in later stages of the study to prevent direct impacts to sensitive sites.
- Community members in all communities made it clear that interconnection between the First Nations communities and Thunder Bay is a high priority.
- Due to the lack of interest, Options 2 and 3 were removed from further consideration as they provide no advantages or benefits over other options.
- Armstrong was identified as a possible interconnection option by community leadership in Round 2 of community engagement. However, some Eabametoong community members also see the advantage of a road connection to the Matawa “highway” communities and Geraldton via Nakina. Community members were not supportive of Option 1 in that it does not take advantage of the possible connection to the Ogoki (all-season) Road.

- In Round 2 of engagement, Eabametoong community members requested the addition of another road corridor option that follows an east-west esker feature.
- In Round 2 of community engagement, Nibinamik community members similarly requested the addition of a corridor Option to track an esker feature which is situated between the community and Pickle Lake.
- In response to the Eabametoong and Nibinamik requests, these two eskers were combined to make new road corridors -- Options 6 and 7. Option 6 connects to the Ogoki Rd which can be followed to Nakina and the provincial highway system. Option 7 is identical to Option 6, but with the addition of a connection point from the Ogoki Rd to Armstrong.
- In Round 2 engagement, most participating community members and leadership from all communities indicated that the all-season road should minimize distance and travel time (maximize access) between the four participating First Nations communities. This was a very common theme supported by most community engagement participants and leadership. In response, for Round 3 community engagement, 3 corridor Options were added that minimize travel distance between communities: Option 8 which interconnects with the highway system via the Ogoki Road at Nakina; and Option 9 which is the same as Option 8 except that it interconnects with the highway at Armstrong from the Ogoki Road. A third option, Option 10, which follows the same corridor between Eabametoong, Neskantaga, Nibinamik and Webequie was added to provide community members the option of selecting a road corridor option which has no highway interconnection. This was intended to focus attention on the community interconnections and leave consideration of highway interconnections to a later stage of the Project.
- Almost all community members in each community identified the importance of minimized travel time to Thunder Bay as a priority, although some community members recognized the benefits of connecting to the smaller centres of Sioux Lookout and Geraldton, many more participants were focused on connection to the many diverse services available in Thunder Bay.
- In Round 3 of engagement, most Nibinamik First Nation community members and leadership prefer corridor Options 6 and 7, both of which track an esker feature between the community and Pickle Lake. This was identified though input from community members and leadership in the first round of community engagement. Not only is this considered the most suitable terrain for road construction, it is also considered to be the preferred alignment for future interconnection with the neighbouring First Nations of Kasabonika and Wunnumin Lake. Opinion seemed to favour Option 6 (interconnection to Nakina).
- In Round 3 of engagement, many community members in all communities recognized that Options 6 and 8 actually provide three connection points to the provincial highway system – a Pickle Lake connection, an Armstrong connection, plus a Nakina connection (via the Ogoki (all-season) Road. The other Options provide only 1 or 2 provincial

highway connections – Option 1 connects only to Pickle Lake; Option 4 connects only to Nakina; Option 5 connects only to Nakina and Armstrong; and Options 6 and 8 connect only to Pickle Lake and Nakina.

- Most members of the Neskantaga First Nation are in support of Options 8 and 9 in that they provide the best connection to other First Nations with a similar travel distance to Thunder Bay. There did not seem to be overwhelming preference for either Option 8 or Option 9, although many participants identified the advantage of the 3-point connection provided by Option 8.
- Most Webequie participants indicated a slight preference for Options 6 and 7, in part to provide a shorter connection distance to Nibinamik, Pickle Lake and Thunder Bay, and also to provide a westerly point of connection for future connection by Kasabonika and Wunnumin Lake First Nations. There was some support for Options 8 and 9, in support of the maximum interconnection between the First Nations communities. Again, some members pointed to the benefits of a 3-point connection (Options 7 and 9).
- Despite the lower cost of constructing and maintaining the all-season road on well-drained soils, participating community members are aware that maximizing the use of eskers could add distance and travel time to inter-community travel. Very few community members identified cost savings as a priority over maximizing inter-community connections (minimizing travel distance).

7.2.2 Which Corridor is Preferred?

A summary of the analysis undertaken by the team to incorporate community input into the identification and comparison of road corridor alternatives is provided in Section 5.0.

7.2.3 Technical Considerations

In addition to considering the opinions and viewpoints of participating community members, the Study Team also examined preference from a technical viewpoint.

Based on community input and technical considerations such as soil type, watercourse crossings as well as capital and operating costs, a number of factors were developed for comparing the Road Options.

In addition, a system of “weights” was developed for comparing road corridor Options. The weights allow the Analyst to assign priorities to the factors used in the comparison. For “Weighting System 1”, all factors were considered to be equal in importance. The priorities were based on community input. ‘Weighting System 2’ was created to examine the importance of cost in the comparison. ‘Weighting System 2’ also recognized that protection of environment and interconnection of communities should always be a priority, although these were given lower “weight” in ‘Weighting System 1 than ‘Weighting System 2.

7.2.4 Overall Conclusions on Question 2

It is recognized by the Study Team that there are a number of differing opinions about a preferred corridor option, although there was also some consensus within communities and across all four participating communities on priorities that should be considered in choosing the best corridor Option. However, it is quite clear that no option stands out as the most preferred by members of all four participating communities. As with Question 1, no quantitative method was used to count the number of community members supporting one option or another.

Given some of the differing priorities between the different communities, it is unlikely that any one of the 8 corridor options to be analyzed and compared will be clearly supported by a majority of members within each community, or more challenging still, a majority amongst community members in all four communities. This would be a significantly challenging task to determine.

The Study Team examined the eight corridor Options that were presented to community members during Round 3 of community engagement. Using the factors identified following community engagement in Rounds 1 and 2, plus technical input, the Study Team collected information for each corridor Option. The Study Team also developed a series of “weights” to reflect community member preference around priority issues.

The analysis and comparison of the corridor Options identified that Option 5 and Option 9 ranked consistently higher than other alternatives through the various factor weighting scenarios. Although Option 9 ranked higher than Option 5 in more of the weighting scenarios when the two Options were compared on the basis of data only (no weights), they each “win” an equal number of categories suggesting that weighting has a significant effect on the choice of the preferred Option.

Although Option 1 has the lowest capital and operating/maintenance cost and least number of watercourse crossings over 30m in width, Option 1 is not considered adequate as it does not provide a connection to the Ogoki Road and Nakina to the south, providing only one connection to the provincial highway system at Pickle Lake.

At a later stage in the study process, it might be worthwhile to conduct a little more analysis of the two most preferred Options and re-conduct the comparison. It will also be important to get more community input on the comparison of the two Options. After these activities are done, selection of a preferred Option will be more informed. More inter-community engagements and technical discussions are needed to negotiate a final route that meets the interests of each community.

7.3 Question 3 – Is there a business case for the road?

The economic analyses for the all-season road were conducted at a high conceptual level, relying primarily on the extrapolation of data from published information sources. The level of analysis is equivalent to a Class "D" indicative estimate. Much more detailed analyses are required in the next stages of the study to provide more accurate estimates for determining the economic feasibility of an all-season road.

For this study, the indicative costs were used to to provide an initial indication as to the costs and benefits of an all-season road compared to the existing system of winter roads and air haul (preliminary business case); and as input into the comparison of the road corridor options, as discussed in Section 5.0.

As discussed in Section 6.7, analyses were conducted to understand, at a preliminary level of detail, the costs and benefits of an all-season road compared to the existing system of winter roads and air haul infrastructure.

Based on these preliminary analyses, several conclusions can be made:

- Annual maintenance and operations costs for an all-season road can be expected to increase by as much as 100% when compared with existing winter road costs. This is primarily due to the fact that the all-season road will be maintained for 12 months of the year as compared to the seasonal operation of the winter road system, which, at best would be 3 months of the year.
- The volume of freight haul that has to be flown into the communities by air can be expected to drop by as much as 50% once an all-season road is in place. It is expected there will be a similar drop in family car haul as goods and supplies will be more available in the communities. Truck haul volumes can be expected to increase by 50%.
- Annual freight haul costs of an all-season road are expected to drop by over 100% for all communities, providing a combined annual savings for all communities of approximately $7 million.
- Combining the increase in annual operations/maintenance costs of the all-season road with the savings in freight haul costs, the economic advantage of the all-season road (Option 9) will be a combined $5.2 million annually for all four communities combined.
- The annual savings on freight haul will primarily benefit the provincial and federal governments as diesel fuel and building materials, both of which are subsidized, represent the largest volume of annual haul.
- Ontario Works payments to First Nations families may decrease as a result of the loss of "remote" status. The amount of the reduction cannot be estimated accurately at this stage in Project development.

- Provincial and federal transfer payments on community operating costs can be expected to be reduced. The amount of the reduction cannot be estimated accurately at this stage in Project development.
- The all-season road is expected to result in other indirect economic benefits resulting from increased opportunities for economic development. The significance of this benefit cannot be determined at this stage in Project development.

Overall, it is expected that the all-season road will result in a net increase in economic benefits, although annual maintenance costs will be higher than for the winter road system. At this preliminary level of analysis, the economic benefit of reduced freight haul costs is estimated to off-set the increase in annual maintenance costs. At this stage in Project development it is uncertain what the source of revenue for the increased annual maintenance costs will be. Although the provincial and federal governments can both be expected to experience reduced costs as a result of the reduction in freight haul cost subsidies for fuel and building materials, it is not certain whether these reductions can be applied to the increase in maintenance costs. Further analysis and discussion with government agencies is required.

In the event that the all-season road results in an increase in economic activity in the Region, there could be an opportunity to derive revenue to cover increased maintenance costs from private sector road-users in the form of tolls or other levies. For example, if the all-season road facilitated the development of mining resources in the Ring of Fire area (or any other area which is now more accessible), a toll or fee could be charged to the mine operator(s) for use of the road to haul ore and supplies. The administrative arrangements for this type of levy, as well as the governance structure for road operation will have to be examined in later stages of Project development before options for this type or revenue generation can be better understood.
Winter road annual costs vs all-season road annual costs/savings:

- Other costs to be considered (OW and transfer payments)
- Net savings of ASCRS
- On-going revenue stream (resource companies, government guarantees, etc.)

8 Recommendations

The following Section provides a series of recommendations for each of the three Questions, based on the conclusions presented in Section 7.0 of this report.

The recommendations have been developed by the Study Team for the purposes of discussion with Leadership of the 4 participating First Nations. It is expected these recommendations will also be discussed with community members. It is expected that the process of choosing those recommendations to accept, and those which will not be accepted, will require discussion among community members following the finalization of this Report.

The direction the community members and Leadership choose to go forward from this Report is not known, but will form the path for next steps of Project Development, if that is the selected path to move forward.

8.1 Question 1 – Should there be an all-season road?

The conclusions for Question 1, based on what the Study Team heard from community members and Leadership, focussed on a number of high level issues, many of which are connected/related. The following are some of the key issues identified for Question 1:

- *Ownership and operation* -- How much involvement should the First Nations have?
- *Financing/funding* -- How will construction and operation of the all-season road be funded and financed?
- *Governance* – Who should be the Owner and Operator of the all-season road? Should the First Nations consider partnerships with government and/or private sector?
- *EA Proponency* – If the study process is to continue, who should be proponent of the EA process? This will be related to the question of governance and ownership, although the EA proponent does not have to be the Owner.
- *Future management of accessible resources* – What role should the First Nations have in the management of natural resources that would be more accessible with the all-season road in place?
- *Licensing/regulatory administration of the all-season road* – Will the road be a provincial road, a private road and how will it be regulated and policed?
- *Environmental, social and cultural impacts of the all-season road* – What will be the opportunities and impacts of the all-season road? What is the balance of opportunities and costs of the all-season road?

There are many other related issues which were raised by community members; however, these are considered the main themes. The Study Team also consistently heard that community members would like to see the road study process continue to address these questions and issues. The recommendations presented below reflect that these questions are important for community members and Leadership.

Recommendation 1.1

It is recommended that Leadership of the participating remote First Nations organize a Remote Table made of representatives of each participating community that is set-up for the purposes of discussing issues and options for governance, ownership and EA proponency and providing guidance to community Leadership. It will be important that the Remote Table is aligned with other strategic discussions.

Recommendation 1.2

Based on the opinions the Study Team consistently heard from community members, it is recommended that the representative Remote Table discussed in Recommendation 1.1, define information requirements, including data and analysis that addresses the key questions being asked by community members. If community membership determines that the Study should proceed, information gathering could include field work necessary to examine environmental and cultural/historic sites along the preferred road corridor option, as well as consideration for more inter-community engagements and collaboration. If the work proceeds, it will be important for the Remote Table to set-up an administrative process for overseeing that work.

Recommendation 1.3

It is recommended that, if the Study is to proceed, the scope of the work to be conducted should include details of a continued community and inter-community engagement process that is designed to be even more inclusive of the broad community interests and fully reflects broad community representation.

Recommendation 1.4

It is recommended, whether it is agreed to proceed with the Study or not, that the representative Remote Table discussed in Recommendation 1.1, set-up regular meetings with representatives of the Government of Ontario and the Government of Canada to jointly discuss issues of governance, ownership and EA proponency, taking direction from community Leadership. It is important that these discussions include financing/funding of on a broad long-term level, as well as funding for next steps of the study process.

8.2 Question 2 – What is the best location for the all-season road?

In Section 5.0 of this report, the Study Team presents analysis and comparison of the all-season road corridor options presented to the community members during Rounds 2 and 3 of community engagement.

The following recommendations are based on the progress made on evaluating the options and tentative consensus reached thus far.

Recommendation 2.1

If it is determined that the Study will proceed, then additional inter-community discussions and more planning is required among the 4 FNs to align the community traditional interests and to accommodate any inter-community impacts. Part of the collective discussions is to identify those elements of each corridor which are preferred, perhaps with the additional of elements of other corridor Options, to identify a hybrid corridor which suits all communities. Inter-community discussions also include neighbouring communities that will be approached through the Remote Table.

Recommendation 2.2

If the Study is to proceed, it is recommended that each of the participating communities identify community representatives that will be involved in the next stages of data collection, including field analysis of the preferred road corridor Option. It is recommended that these community representatives include, but not be limited to, community members that have knowledge of the land and knowledge of environmental analysis. It is also recommended that the scope of work and budget for this continued study include funding for a full-time Coordinator from each participating community.

8.3 Question 3 – Is there a business case for the road?

The conclusions presented in Section 6.0 of this report address the economic aspects of an all-season road, focussing on the net balance of cost increases and economic benefits. At this preliminary stage of study, these conclusions are initial only and not based on detailed information. In addition to the many other important issues addressed in the recommendations above, the economics of an all-season road are important when deciding whether the road, on balance, is positive or not. The following recommendations are focussed on the economic aspects of an all-season road.

Recommendation 3.1

As outlined in the preliminary analysis provided in Section 6.0, overall it is expected that the all-season road will result in a net increase in economic benefits based on savings (net of freight savings and increased road maintenance costs in comparison with the winter road system).

However, much more detailed analysis is required to determine the feasibility of an all-season road. If the Study is to proceed, it is recommended that more economic and financial information be collected to refine the analysis conducted in this preliminary stage of Project development. Information that should be collected includes more accurate estimates of construction and operations/maintenance costs and freight haul costs.

Recommendation 3.2

At this stage in Project development it is uncertain what the source of revenue for annual maintenance costs will be. Although the provincial and federal governments can both be expected to experience reduced costs as a result of the reduction in freight haul cost subsidies for fuel and building materials, it is not certain whether these reductions can be applied to the increase in maintenance costs. If the Study is to proceed, it is recommended that the next stages of Project development include more detailed discussion of options for generating revenues to cover both capital and operating/maintenance costs. This discussion should include discussion with government agencies and consideration of partnerships.

Recommendation 3.3

In the event that the all-season road results in an increase in economic activity in the Region through resource development, there could be an opportunity to generate revenue to cover increased maintenance costs from private sector road-users in the form of tolls or other levies. The administrative arrangements for this type of levy, as well as the governance structure for road operation will have to be looked at in detail by the participating First Nations. It is recommended that the representative Remote Table recommended in Recommendation 1.1, consider the positive and negative aspects of how private sector companies can be involved in the economics of an all-season road. This could include consideration of a private-public partnership (P3) between the governing First Nations and many variations of this type of governance structure. The Remote Table will ensure the maximization of community-based benefits.

Recommendation 3.4

From preliminary analysis and initial discussions with government agencies, it is recognized that an all-season road could affect Ontario Works payments made to participating families as well as band funding that are transferred to the First Nations from provincial and federal government transfer payments. Changes to these payments could result from the potential loss of “remote” status. It is recommended that any study work conducted as a result of recommendations under Question 1, include further analysis of these potential changes, including detailed discussions with government agency representatives. This study work should also analyze options for mitigating any negative impacts that might result from loss of remote status,

including consideration of recommendations for a gradual reduction, where reductions are expected.

9 Study Outcome

On June 16-17, 2016, the Chiefs and Councils of the four First Nations participating in the Study convened to review the highlights of the draft Report for the Study as prepared by the consultant study team. The meeting was well attended by all the Councils and the consultant team.

A plenary session was held on June 16, including a presentation of the Report findings, followed by a question and comment period by the First Nations representatives. It was agreed that each First Nation required some time on their own to discuss the Report findings before caucusing as the four First Nations together to explore the areas of consensus.

Most of the day on June 17 was taken up with individual community meetings. This was followed by a joint First Nations (only) caucus. Following the joint First Nations (only) caucus, representatives of the four First Nations each spoke to the conclusions and recommendations developed by the communities in the joint First Nations (only) meeting, and agreed to by all.

The following section provides the Conclusions and Recommendations that were developed by the four communities and commentary on next steps of the all-season road process in that context.

9.1 Conclusions and Recommendations Endorsed by the Four Participating First Nations

The collective conclusions and recommendations that were provided by the four First Nations to the consultant team in full plenary on June 17 are as outlined below.

Conclusions

- *We conclude collectively the government is driving the process*
- *It does not meet FN's planning and only meets government's planning*
- *Lack of adequate consultation*
- *Need to address jurisdiction as it pertains to FN and governments*
- *FN want more information to be able to make a decision (informed decision) for the options identified and presented*

Recommendations

- *No further decision at this time*
- *Further study is required and negotiation in the regional framework process*
- *Remotes table to continue dialogue with their respective and neighbouring communities*

- *Remote FN planning table will be linked to jurisdiction and defined prior to moving forward subject to established working groups*
- *Consider other FN involvement and synergies with other FN projects*

9.1.1 Implications for the Study process

Most of the conclusions and recommendations provided by the four participating First Nations are consistent with the conclusions and recommendations of the consultant study team as discussed in Sections 7.0 and 8.0 of this Report, consecutively. They also reflect what many community members told the consultant team during community engagement.

Specific implications for the study process will require further discussion with Leadership of the four communities, and likely between the four communities and the government. However, for the purpose of understanding the implications of the conclusions and recommendations in regards to next steps in the study process, the consultant study team interpreted the conclusions and recommendations as follows:

- A “yes” or “no” decision for a community road or a road corridor Option cannot be made at this time.
- They are recommending the establishment of a discussion/negotiation group (Remote Table), made up of the remote First Nations, for the purposes of further Leadership discussion of the all-season road and to discuss “jurisdiction” with government.
- In regards to the remote First Nations group, clarification should be given and confirmation should be sought, as to whether this group would include the five Matawa Tribal Council remote communities (including Marten Falls First Nation) or just the four First Nations that participated in the current study.
- They tied “further study” of an all-season road to be driven by the remote FNs that will be aligned with the Regional Framework Agreement
- It is also indirectly recommended that there be further community engagement with their respective and neighbouring First Nations.
- They are recommending further study to obtain more information before they can make an informed “yes” or “no” decision on the all-season road.

The Chiefs and Councils did not address a schedule for their recommended activities, other than to imply that the First Nations should control the schedule in accordance with their own planning objectives and community process. However, it is observed that the Leadership indicated they want “more information” and that “further study” is required before informed decisions can be made.

Further clarification should be obtained through on-going communication between the participating First Nations and government funders of the study as to how quickly the remote First Nations discussion/negotiation group can be established, and whether Leadership would

agree to a scope of work and schedule for “more information” and “further study”, perhaps in parallel to the discussions and/or negotiations that have been recommended.

Prefatory Comments:

1. Recent public comments by the Premier have created an impression that the Ontario government intends to approve this project regardless of the nature and extent of adverse impacts and significant levels of concern expressed by Neskantaga, other First Nations, Canada, and independent scientists, academics, members of the public and NGOs who will review the project.
2. Simply providing updates, teleconferences, virtual sessions, and general opportunities to comment does not rise to the level of required consultation and consent, particularly when suggestions and input provided are not incorporated. Meaningful negotiations with Neskantaga, and other First Nations, will be required.
3. Future meetings should be scheduled collaboratively with Neskantaga.
4. The proposed Noront nickel mine, and several other mining projects, are not just additional unrelated actions. They are described as depending on the building of the WSR, due to the infrastructure and other components it would provide. This is a key cumulative impact of the proposed project that should be clearly described in a summary section.

Questions:

5. Will the EA/IS consider whether the proponent has the technical and financial capability to take action, to the extent reasonably practical, to prevent any significant adverse environmental impact, including damage to fish, wildlife, and their habitat?
6. How many streams will the road and associated activities cross, and how many of those crossings have resident fish in them?
7. Do you have data on the range of the natural population variability of the fish in the impacted streams?
8. Will the EA/IS analyze consequences to fish from alterations in groundwater pathways?
9. A stream sample site that seems to have low population numbers one year may have extraordinarily high numbers of fish at a different time of the year, or in different years. How will the EA/IS account for the variability in stream use by fish from a system perspective?
10. Will the EAR/IS have any actual data on numbers of individual fish affected compared to existing fish populations?
11. Wildfire in the area appears to be an increasing threat. What are the potential impacts on and/or risks of wildfire for the road?
12. Will the discussion of truck and other road traffic be quantitative or qualitative?
13. Will references and/or a technical appendix that provides additional information and analysis supporting the conclusions in the EA/IS be provided to allow the reader to evaluate the conclusions?

14. Will there be a summary section that would allow the reader to gain an overview of the key impacts of the project and its alternatives, without poring through the detailed individual sections?

15. Will cumulative impacts of all reasonably foreseeable future activities, as well as the key impacts of the WSR, be described in quantitative terms?

16. Identification of unavoidable adverse impacts is critical because it forms the basis of required compensatory mitigation. Will unavoidable adverse impacts of the project be specifically identified in the EA/IS sections, with a summary of these impacts in the EA/IS?

17. Will a summary of impacts be provided, indicating which impacts could be avoided or minimized versus those for which compensatory mitigation would be required? If not, why not?

18. A full lifecycle assessment of carbon emissions associated with the mine[s] would be far higher than direct emissions at the site. Will estimates be provided of cumulative GHG emissions with reasonably foreseeable future activities that the project may facilitate by providing infrastructure?

19. Aggregate quarries located on eskers have high archaeological potential. What volume of rock is projected to be extracted from the quarries?

20. Do the wildlife and plant impact study areas include the proposed aggregate/rock source areas, and if not, why not?

21. Slide 33: What factors are used to measure "habitat availability (quantity - hectare and quality)"?

22. Can you explain the impact of the new project timeline, given the recent extension?

23. Can you explain how a cumulative effects approach, considering the impacts of extensive planned mining activity, contingent upon the proposed road system, will be incorporated into the WSR EA/IA?

24. Can you share details about any commitments made to enact the project's purpose regarding the provision of employment and training for Indigenous community members?

    a. For example, what proportion of positions will be reserved for community members?

    b. Of these positions, what proportion will be long-term, full-time, pensioned, and/or leadership positions?

25. How will the EA/IA assess the likelihood of increased violence against Indigenous women and girls as a result of the new road access?

26. What plans are in place for remediation of the aggregate quarries after closure, and have these costs been incorporated into cost-benefit projections?

27. Slide 44: Can you explain further any plans to collaborate and work with Indigenous communities? Does this include the use of Neskantaga consultation protocols?

28. Slide 45: Will the Indigenous Knowledge Program directly include Neskantaga in decision making, and if so, how?

29. Slide 45: In the Indigenous Knowledge Program, how will Neskantaga's knowledge be validated, and why? IK that Neskantaga elders and knowledge holders share should not be assumed to require validation.

30. How many days in the field have your biologists spent on the various fish, wildlife, etc. programs?

31. Will the EA/IA contain a prediction of the induced changes to fish and wildlife population levels through increased harvests and other causes as a result of the new road access?

32. Is there some point beyond which the predicted impacts to wildlife and wildlife habitat are so great that the viability of the road can be called into question? Is this point definable and, perhaps more importantly, is it measurable? What data would be required to determine whether this point has been reached or exceeded?

May 13, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on wildlife and species at risk. This upcoming week's session is: **WSR Presents: Wildlife and Species at Risk.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **May 18th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

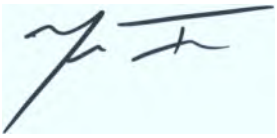
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

May 27, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on field studies related to water. This upcoming week's session is: **WSR Presents: Field Studies - Water.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 1st, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 10, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on field studies related to fish and fish habitat. This upcoming week's session is: **WSR Presents: Field Studies - Fish and Fish Habitat.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 15th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

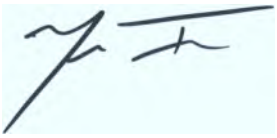
Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.
Drop-in Sessions	When COVID-19 protocols allow, community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, ortechnicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platformsthat Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings,tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question and answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will payfor to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,



Michael Fox

Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 24, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team has planned a live streaming and radio call-in show focusing on cultural heritage This upcoming week's session is: **WSR Presents: Cultural Heritage.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **June 29th, 2022 at 2:30-3:30 pm (EST)**. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a live streaming event is scheduled on the same day as the above radio show at **4:30pm – 5:00pm (EST)** which is accessible on the WSR Project website https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Lastly, as the WSR Project is currently in the EA/IA phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below, taking into consideration of COVID-19 restrictions. We understand that at this time in-person meeting and engagement should be limited given current public health restrictions. Therefore, the WSR Project Team is offering virtual methods of engagement. The WSR Project Team will continue to offer these virtual engagement methods until Indigenous communities are comfortable meeting with the WSR Project Team in-person and with proper protocols and guidelines in place. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	When COVID-19 protocols allow, open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	When COVID-19 protocols allow, community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question and answer period at the end of the presentation.

July 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

The WSR Project Team is currently hosting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

If the WSR Project Team has already hosted a virtual information session for your community, you can watch the recording of your community's session at: **supplyroad.ca/sessions/**. You can leave questions or comments at any time on your community's page and the Project Team will provide a response. If the WSR Project Team has not yet hosted a virtual information session for your community, you can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Socio-Economic Primary Data Collection Program

A key component to the EA/IA process is to collect socio-economic information within the project study area to help us understand the current social and economic conditions to create a socioeconomic baseline in order to assess and predict the changes to current conditions. The objective of the study is to characterize the manner and extent to which community socio-economic well-being could be affected (both positively and negatively) by the construction and operation/maintenance of the WSR Project. As such, the Project Team is seeking participation from Indigenous communities to discuss and collect socio-economic information or verify information gathered to date based on current research. You can find more information regarding the program on the WSR website: https://www.supplyroad.ca/ik-and-socio-economic/

We would like to invite your community to participate in the WSR socio-economic primary data collection program. To express your community's interest or if you have any questions regarding the socio-economic primary data collection program for the WSR Project, please feel free to contact Marian Tibor-McMahon at 416-668-3298 or marian@indigenousengagement.ca.

At any time, you can access additional information on the WSR website: **supplyroad.ca.** You can also stay tuned with the WSR Project by following our social media channels:

August 12, 2022

Dear Chief,

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of

	interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Consultation Round 2

Throughout the EA/IA phase, the Project Team conducts studies to gather information on a wide range of topics and consults with Indigenous communities, members of the public, and other stakeholders, to evaluate the Project and its potential effects. This month we are concluding our Consultation Round 1 and will be moving into Round 2, before the final Round 3.

We encourage community members to watch their information session at **supplyroad.ca/sessions/** where you can find your community-specific page.

Consultation Round 2 will focus on the following topics:

- Summary of input received from Consultation Round 1
- Identification and evaluation of alternatives
- Preliminary recommended preferred route and supportive infrastructure (aggregate/rock source areas, construction camps, access roads), including rationale for selection
- Preliminary engineering design elements of WSR (bridges/culverts)
- Next steps and schedule

Stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

The WSR Project website also has various informational videos, communication materials and project updates. Please visit: https://www.supplyroad.ca/

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Craig Wallace, Project Manager, SNC-Lavalin Inc.

Comment Response Table

Proposal: Webequie Supply Road Project Environmental Assessment/Impact Assessment
Proponent: Webequie First Nation

Commenter: Neskantaga First Nation

Comment ID	Reference	Comments & Rationale	Proposed Action/Solution	Proponent Response
NFN-03	N/A	May 13, 2022 Via e-mail Subject: Questions & Comments from Neskantaga re: 16 May event Good morning WSR Team, My name is Lo Stevenson, I'm a student with Osgoode Hall Law School's Environmental Justice & Sustainability Clinic. At Neskantaga's request, I will be attending Monday's meeting with you. Thank you for kindly allowing us to review your presentation in advance. That has allowed me to compile a list of comments and questions from Neskantaga, here attached, which you may review in advance of Monday's meeting. Sincerely, Lo Stevenson (they/them) Osgoode Hall JD Candidate 2024	N/A	Thank you for the submission of comments and questions on behalf of Neskantaga First Nation.
NFN-04	N/A	Prefatory Comments: 1. Recent public comments by the Premier have created an impression that the Ontario government intends to approve this project regardless of the nature and extent of adverse impacts and significant levels of concern expressed by Neskantaga, other First Nations, Canada, and independent scientists, academics, members of the public and NGOs who will review the project.	N/A	It is not the role of the proponent to respond to comments from the Premier of Ontario as interpreted by Neskantaga First Nation.
NFN-05	N/A	2. Simply providing updates, teleconferences, virtual sessions, and general opportunities to comment does not rise to the level of required consultation and consent, particularly when suggestions and input provided are not incorporated. Meaningful negotiations with Neskantaga, and other First Nations, will be required.	N/A	The Webequie Supply Road (WSR) Environmental Assessment / Impact Assessment (EA/IA) is a critical step to the comprehensive approach to better understand and mitigate any potential impacts of the proposed project before it is constructed. The EA/IA will consider all existing information and evidence and will collect additional information that will inform decision-making about future development in this important area. Regarding your comment on consultation activities to date and level of required consent we note that a Virtual Community Information Session was offered to Neskantaga First Nation (NFN) leadership and its members on May 16, 2022, and which representatives of NFN attended (Osgoode Hall Law School's Environmental Justice & Sustainability Clinic). The intent of this session was to present an overview of WSR's EA/IA activities and hold question and answer period. In the session, community members are able to ask questions, raise concerns, and have a discussion directly with WSR Project Team members. The goal of the session with NFN, and with other First Nation communities, is to provide an opportunity for multilateral consultation and engagement. As previously mentioned in our correspondence to NFN, additional engagement sessions with Chief and Council members, advisors and staff, are available either virtually or in-person following COVID protocols.

Comment ID	Reference	Comments & Rationale	Proposed Action/Solution	Proponent Response
				The Project Team has made repeated attempts to engage and consult with the NFN. We have reached out via mail, email, and fax on a nearly weekly basis. In these correspondences, we have provided various options for NFN to engage with the Project. It is our expectation that Indigenous communities will continue to participate in the EA/IA because that is how their specific concerns, particular issues, and any impacts will be known, documented, and mitigated. We would like to reiterate that we would like to engage and work with NFN (like we are doing with other Indigenous communities) to help ensure that the EA/IA for the WSR is informed by concerns raised about potential impacts and to receive Indigenous knowledge where a community is willing to share.
NFN-06	N/A	3. Future meetings should be scheduled collaboratively with Neskantaga.	N/A	Refer to response to NFN-05 comment. Please provide a date when a future meeting can be arranged with NFN that is convenient to leadership and/or community members.The Project Team has provided a list of engagement options numerous times to Neskantaga First Nation. We would be more than happy to engage with Neskantaga First Nation using the engagement methods they prefer.
NFN-07	N/A	4. The proposed Noront nickel mine, and several other mining projects, are not just additional unrelated actions. They are described as depending on the building of the WSR, due to the infrastructure and other components it would provide. This is a key cumulative impact of the proposed project that should be clearly described in a summary section.	N/A	The purpose of the WSR is to connect Webequie First Nation with mining and mineral exploration activities in the McFaulds Lake area and specifically to provide employment and other economic development opportunities to community members and businesses that reside in or around the community. An interconnection with the provincial highway system is not necessary to facilitate the WSR. Infrastructure projects such as the Northern Road Link and Marten Falls Community Access Road, as well as mining developments in the region will be considered as part of the cumulative effects assessment for the WSR Project. The general study plan approach to the proposed cumulative effects assessment is available on the project website (www.supplyroad.ca) and the Project Team are prepared to meet with willing communities to discuss and receive input on this specific component of the assessment. The cumulative effects assessment will be documented in the Environmental Assessment Report / Impact Statement (EAR/IS) for the Project.
NFN-08	N/A	Questions: 5. Will the EA/IS consider whether the proponent has the technical and financial capability to take action, to the extent reasonably practical, to prevent any significant adverse environmental impact, including damage to fish, wildlife, and their habitat?	N/A	Webequie First Nation is the proponent of the Webequie Supply Road Project for the purpose of the EA/ IA. At this point in time, it has not been determined who will construct, maintain and operate the Webequie Supply Road and is subject to further discussion between Webequie First Nation and Ontario. Commitments to mitigation measures that are intended to eliminate or minimize adverse effects will be recommended and documented in the EAR/IS for the Project and would the responsibility of the ultimate owner and operator of the WSR, including the technical and financial capabilities to implement such actions.
NFN-09	N/A	6. Do you have data on the range of the natural population variability of the fish in the impacted streams?	N/A	Fish and fish habitat studies to characterize existing conditions are on-going. In general, the objectives of aquatic assessment are to: identify potential fish habitat and species, including species at risk, at waterbody crossings potentially affected by the Project through fish community and spawning surveys; characterize benthic invertebrate species composition, richness and abundance at waterbody crossings; and provide a general characterization of fish and other aquatic species as defined in the Fisheries Act on the basis of resident and migratory species, food webs and trophic levels, structural and functional linkages, life history and population dynamics. Surveys are intended to collect data over a 2-year period to address seasonal and annual variability of data on fisheries.
NFN-10	N/A	7. Will the EA/IS analyze consequences to fish from alterations in groundwater pathways?	N/A	The EA/IS will assess changes to groundwater and surface water interactions from the Project, including potential linkage to harm fish and/or fish habitat.
NFN-11	N/A	8. A stream sample site that seems to have low population numbers one year may have extraordinarily high numbers of fish at a different time of the year, or in different years. How will the EA/IS account for the variability in stream use by fish from a system perspective?	N/A	Refer to response to NFN-09 comment. Surveys are intended to collect data over a 2-year period to address seasonal and annual variability of data on fisheries.
NFN-12	N/A	9. Will the EAR/IS have any actual data on numbers of individual fish affected compared to existing fish populations?	N/A	Typically in an EA/IA the proponent does not specifically identify the number of individual species affected by the project in comparison to existing conditions. For the WSR Project, fish habitat will be assessed from several perspectives including potential effects to habitat availability (changes to quantity and/or quality); and effects to fish communities with respect to abundance (e.g., changes to population from physical activities or changes to habitat availability) and distribution (i.e., spatial configuration and connectivity of habitats for fish).
NFN-13	N/A	10. Wildfire in the area appears to be an increasing threat. What are the potential impacts on and/or risks of wildfire for the road?	N/A	Accidents and malfunctions as it relates to the construction and operations phases of the Project will be examined in later stages of EA/IA process, including their potential to increase the risk of fires. As part of the EA/IA it is expected that an Environmental Management Plan, with mitigation and best management practices and procedures, will be developed to address potential risks of fires from project activities; and also emergency and contingency measures to address naturally occurring wildfires affecting the road.

Comment ID	Reference	Comments & Rationale	Proposed Action/Solution	Proponent Response
NFN-14	N/A	11. Will the discussion of truck and other road traffic be quantitative or qualitative?	N/A	Based on the functional road type categorization for the proposed WSR (i.e., Rural Collector Undivided), intended purpose of the road, and population in the community of Webequie, an average annual daily traffic (AADT) volume of less than 500 vehicles has been assumed for the Project and used as design criteria for the road. It is expected that traffic during the operations phase will comprise light to medium personal and commercial vehicles, and heavier trucks carrying industrial (mining) supplies and equipment. The road will not be used to transport mine products. Further discussion on road traffic will be presented in the EAR/IS.
NFN-15	N/A	12. Will references and/or a technical appendix that provides additional information and analysis supporting the conclusions in the EA/IS be provided to allow the reader to evaluate the conclusions?	N/A	Supplemental technical appendices for select valued components (VCs) (e.g., air quality, noise, human health) are expected to be produced and included in the EAR/IS, and as such will be available for review by the public, stakeholders and Indigenous communities.
NFN-16	N/A	13. Will there be a summary section that would allow the reader to gain an overview of the key impacts of the project and its alternatives, without poring through the detailed individual sections?	N/A	An executive summary of the EAR/IS in plain language is expected to be produced, along with other communication materials, to allow for readers of various levels of interest to review and understand the conclusions of the EA/IA for the Project. Note that all communication materials produced to support the EA/IA process, as well as the EAR/IS will be made available to Indigenous community members and the public on the project website.
NFN-17	N/A	14. Will cumulative impacts of all reasonably foreseeable future activities, as well as the key impacts of the WSR, be described in quantitative terms?	N/A	Depending on the available data and information, which is still to be determined, an appropriate methodology will be selected for characterizing the cumulative effects solely from the physical activities in the future scenarios with the WSR Project and without the Project. In accordance with the Interim Cumulative Effects Assessment Guidance Document (Canadian Environmental Assessment Agency, March 2018) the proposed methodology for determining cumulative effects is likely to be primarily qualitative, including descriptive narratives, graphic presentation or conceptual relationships. However, where feasible, comparison with and without the WSR Project may include quantitative elements to predict cumulative effects to valued components.
NFN-18	N/A	15. Identification of unavoidable adverse impacts is critical because it forms the basis of required compensatory mitigation. Will unavoidable adverse impacts of the project be specifically identified in the EA/IS sections, with a summary of these impacts in the EA/IS?	N/A	Predicted residual or net effects after the application of mitigation measures will be documented and summarized in the EAR/IS, including characterizing the net effects. The characterization of net effects will provide the foundation for determining the significance of incremental and cumulative effects from the Project for each valued component. The objective of the method will be to identify and predict net adverse and positive effects that have sufficient magnitude, duration, and geographic extent to cause fundamental changes to the self-sustainability or ecological function of a valued component and, therefore, result in significant combined effects.
NFN-19	N/A	16. Will a summary of impacts be provided, indicating which impacts could be avoided or minimized versus those for which compensatory mitigation would be required? If not, why not?	N/A	Refer to response to NFN-16 comment. Where, significant residual effects for a valued component remain after mitigation, restitution for any damage caused by those effects will be identified and may include replacement, restoration, compensation or other means.
NFN-20	N/A	17. A full lifecycle assessment of carbon emissions associated with the mine[s] would be far higher than direct emissions at the site. Will estimates be provided of cumulative GHG emissions with reasonably foreseeable future activities that the project may facilitate by providing infrastructure?	N/A	After identifying and characterizing the net effects for each of the VCs they will be compiled and carried forward by the Project Team for integration in the cumulative effects assessment with input from consultation activities with Indigenous communities, the public and stakeholders. In general, the selected VCs for the cumulative effects are those most likely to be affected by the Project in combination with other projects and activities. The cumulative effects resulting from the past, present and reasonably foreseeable projects, as listed in the federal Tailored Impact Statement Guidelines for the WSR, will be considered by the Project Team within the larger cumulative effects spatial boundaries and temporal boundaries, to the extent possible. At this time in the assessment process, it is unclear if GHG estimates for future projects or activities will be considered as this will be contingent on the type, reliability, completeness and limitations to the available data and information sources regarding projects or activities and their predicted impact on the VC. For some activities or projects that have recently been implemented, or that are in the planning/approval phase, comprehensive data may be available and will be examined, to the extent possible. However, for projects or activities that are at conceptual level currently, or historic, limited data and information may be available.
NFN-21	N/A	18. Aggregate quarries located on eskers have high archaeological potential. What volume of rock is projected to be extracted from the quarries?	N/A	The preliminary estimate of aggregate/rock material needed to construct the WSR is 2,849,500 cubic metres.
NFN-22	N/A	19. Do the wildlife and plant impact study areas include the proposed aggregate/rock source areas, and if not, why not?	N/A	The study areas for wildlife and vegetation include potential suitable aggregate sources identified at this time.
NFN-23	N/A	20. Slide 33: What factors are used to measure "habitat availability (quantity - hectare and quality)"?	N/A	The factors used to measure changes to habitat availability vary to some extent for VCs. As an example, for vegetation (uplands and wetlands) a quantitative measure (hectares) of removals would be used as well as quality (High, Moderate, Low) of vegetation associations available to wildlife species and their various life history stages.

Comment ID	Reference	Comments & Rationale	Proposed Action/Solution	Proponent Response
NFN-24	N/A	21. Can you explain the impact of the new project timeline, given the recent extension?	N/A	As per our email correspondence to D. Peerla on June 3, 2022, for the WSR Project the two levels of government have indicated a willingness to follow a coordinated EA/IA process to the extent possible. Therefore, the proponent will align the provincial EA process with the federal Impact Statement Phase, where possible, including adjusting its project schedule and consultation program. The WSR Team and Impact Assessment Agency Canada (IAAC) are currently in preliminary discussions regarding an extension request to the Impact Statement Phase for the Project and no date has been set for an extension at this time. A decision regarding this matter will occur once the proponent submits a written request for an extension and IAAC evaluates the request based on the proponent's progress in the EA/IA process (e.g., baseline studies, engagement and consultation. etc.). It is the proponent's intent to submit a formal request for an extension to the Impact Statement Phase on September 24, 2022.
NFN-25	N/A	22. Can you explain how a cumulative effects approach, considering the impacts of extensive planned mining activity, contingent upon the proposed road system, will be incorporated into the WSR EA/IA?	N/A	Refer to response NFN-20 comment. Reasonable foreseeable projects and activities will be included in the cumulative effects assessment, such as Eagle's Nest Mine and the Northern Road Link and Marten Falls Community Access Road that link the provincial road network to the Ring of Fire area.
NFN-26	N/A	23. Can you share details about any commitments made to enact the project's purpose regarding the provision of employment and training for Indigenous community members? a. For example, what proportion of positions will be reserved for community members? b. Of these positions, what proportion will be long-term, full-time, pensioned, and/or leadership positions?	N/A	Webequie First Nation, as the proponent of the WSR Project, is committed to maximizing Indigenous participation in all development phases of the Project (i.e., planning, construction, operations), with the goal to provide employment, training and business opportunities to its community members and others. At this early stage of the assessment process, specific proportions of positions for community members, including long-term, full-time, pensioned, and/or leadership positions are not known. As the socio-economic assessment is advanced, information on employment, training and business opportunities will be documented in the EAR/IS.
NFN-27	N/A	24. How will the EA/IA assess the likelihood of increased violence against Indigenous women and girls as a result of the new road access?	N/A	The approach to assess potential increase of violence against Indigenous women and girls will involve, but not be limited to, key informant interviews and focus groups to gather experience of Indigenous women/girls in communities on the issue and to review social studies that have examined the relationship and potential impacts of new road projects and Indigenous communities. Through consultation activities the Project Team will also engage with women and community members to help determine appropriate mitigation measures to reduce/minimize violence against Indigenous women and girls
NFN-28	N/A	25. What plans are in place for remediation of the aggregate quarries after closure, and have these costs been incorporated into cost-benefit projections?	N/A	A reclamation and restoration plan is proposed to be developed for aggregate pit or quarry areas following their closure. At this preliminary stage this may involve backfilling, regrading/contouring of areas and reforestation to restore vegetation communities representative of the area. Additional details related to closure are expected to be developed as part of the permit for the operation of aggregate pits/quarries for the Project under the Aggregate Resources Act.
NFN-29	N/A	26. Slide 44: Can you explain further any plans to collaborate and work with Indigenous communities? Does this include the use of Neskantaga consultation protocols?	N/A	The Project Team is eager and willing to collaborate with Indigenous communities in all key phases of the EA/IA, such as baseline data collection, evaluation of alternatives and the effects assessment, including identifying mitigation to address Indigenous peoples areas of concern. As an example of our plan to collaborate, in December 2021 an invitation letter was sent to all Indigenous communities seeking their interest to discuss and help with collection of socio-economic information (i.e., focus groups, surveys, etc.) or verify information gathered to date by the Project Team based on current research. For this specific initiative, D. Peerla provided a reply to the Project Team on December 22, 2021 that Neskantaga First Nation could not participate in the socio-economic primary data collection program, but did offer to review our list of secondary sources reviewed and provide additional sources to consider, where applicable. As well, in December 2021 the Project Team sent an invitation letter to all communities regarding participation in the Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program for the Project. One of the key objectives of this program is to collaborate and work with Indigenous communities to enhance positive impacts or to identify measures to avoid/reduce potential effects on Indigenous rights and interests. We welcome further discussion with Neskantaga on their consultation protocols and exploring opportunities to work collaboratively with the Project Team on the WSR Project.
NFN-30	N/A	27. Slide 45: Will the Indigenous Knowledge Program directly include Neskantaga in decision making, and if so, how?	N/A	As stated in the IKLRU Program invitation letter sent to NFN in December 2021 (refer to above response), the IKLRU Program is to help identify potential impacts of the Project, including those on Indigenous rights and interests; and is intended to be collaborative with opportunity for NFN to contribute to the decision-making process with respect to the planning and assessment of the Project. While the IKLRU Program is distinct from the Consultation Program for the WSR Project, the two are complementary and collectively serve to solicit Indigenous perspectives, values and inputs with respect to the Project. Opportunities for contributing to the decision-making process are available at 3 key milestones (i.e., 1 - Notice of Commencement, Study Plans, Baseline Studies; 2 – Identification and Evaluation of Alternatives; 3 Preliminary Effect Assessment of the Project) in the process as a requirement of the approved Terms of Reference for the Project, which

Comment ID	Reference	Comments & Rationale	Proposed Action/Solution	Proponent Response
				involves the Project Team distributing consultation progress reports to each Indigenous community with the objective to seek their direct input into the EA/IA.
NFN-31	N/A	28. Slide 45: In the Indigenous Knowledge Program, how will Neskantaga's knowledge be validated, and why? IK that Neskantaga elders and knowledge holders share should not be assumed to require validation.	N/A	The purpose of the IKLRU validation is to provide an opportunity for a community and/or individuals to review IKLRU information they provided, to add or revise draft results, and to provide informed consent for the use of approved information in EA/IA documentation, as needed. A validation approach might involve a community validation workshop as a step in the data collection process to provide an opportunity for individuals that participated in a study to review IKLRU information derived from pre-existing and/or project-specific IKLRU studies to verify quality, representativeness and accuracy of the information presented, and to add or revise information presented. The community validation workshop could be conducted by the community's own research/consulting team and/or through a collaborative effort with the proponent's Project Team. Dependent on the community's wishes, the validation workshop can cover pre-existing or project-specific IKLRU information. Community participants that are involved in providing information for a study may be invited to review individual map biographies and/or interview transcripts. Participants would have the opportunity to add new data, and modify any points, or boundaries on their individual maps which they do not agree with. This process will ensure that the data on the maps will be accurate and validated by participants. Finally, decision-making authority of the community leadership will be followed to ensure the IKLRU information is presented and approved in accordance with community protocols.
NFN-32	N/A	29. How many days in the field have your biologists spent on the various fish, wildlife, etc. programs?	N/A	The Project Team does not track individual days of each field staff person by VCs (e.g., fisheries, wildlife), as in some cases staff are working on numerous field programs on a single field trip. In general, biological field surveys have occurred during the field season period between May 15 to October 30 in 2020 and 2021. As well, specific species at risk studies, such as caribou aerial surveys have occurred from January to March of 2019 to 2022, with future work planned in 2023.
NFN-33	N/A	30. Will the EA/IA contain a prediction of the induced changes to fish and wildlife population levels through increased harvests and other causes as a result of the new road access?	N/A	Prediction of induced changes to fish and wildlife due to potential increase in level of harvests will be considered in the EA/IA for the WSR and its intended purpose of connecting Webequie to the McFaulds Lake area.
NFN-34	N/A	31. Is there some point beyond which the predicted impacts to wildlife and wildlife habitat are so great that the viability of the road can be called into question? Is this point definable and, perhaps more importantly, is it measurable? What data would be required to determine whether this point has been reached or exceeded?	N/A	Environmental assessments are an important component of the planning and decision making process for projects. The EAR/IS for the WSR Project will present both the baseline conditions and Project-related effects on wildlife and wildlife habitat. As part of the assessment process, predicted residual or net effects after the application of mitigation measures will be documented and summarized in the EAR/IS, including characterizing the net effects and determination of significance with consideration of criteria such as magnitude, geographical extent, duration, frequency, reversibility, context, and probability of occurrence. As this stage the specific wildlife questions raised are considered premature as baseline data collection is ongoing and the effects assessment has not been started by the Project Team, including level of confidence of prediction of impacts to wildlife and wildlife habitat. As well, consultation with communities and Indigenous Knowledge and land and resource use studies are incomplete at this time and may contribute to what is defined as an acceptable point of impact. Indigenous communities will be provided with the opportunity to review and provide input to the EAR/IS, including conclusions around the determination adverse effects to wildlife and wildlife habitat.

October 07, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations - Caribou.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **October 11th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to carolina@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)

Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**
You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

October 21, 2022

Chief Wayne Moonias
Neskantaga First Nation
P.O. Box 105
Landsdowne House, ON
P0T 1Z0

Re: Round 1 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Moonias:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report (electronic and hard copy), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);

- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 2 for the Project from Winter 2023 to Summer 2023. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 1;
- Identification and evaluation of alternatives (routes, aggregate source areas, etc.,);
- Preliminary recommended preferred route and supportive infrastructure (aggregate/ rock source areas, construction camps, access roads), including rationale for selection;
- Preliminary engineering design elements of WSR (bridges/culverts); and,
- Next steps and schedule.

We welcome any feedback and input your community may have on the attached Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

November 2, 2022

Dear Chief,

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week featuring our special guest storyteller/comedian Ron Kanutski. The topic of the upcoming session is: **WSR Presents: Baseline Field Studies - Preliminary Observations – Fish and Fish Habitat.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **November 8th, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

You can also stay tuned with the WSR Project by following our social media channels:

November 17, 2022

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Biweekly Radio and Livestreaming Series is Back

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Building Roads in Muskeg Areas/James Bay Lowlands.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **Tuesday, November 22nd, 2022** at **11:00am - 12:00 pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.

Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Other Ways to Stay Up To Date

You can also stay tuned with the WSR Project by following our social media channels:

Facebook	Instagram	Twitter
facebook.com/wfnsupplyroad	instagram.com/wfnsupplyroad/	twitter.com/wfnsupplyroad

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.
On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

November 30, 2022

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Biweekly Radio and Livestreaming Series is Back

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Cumulative Effects – An Explanation and Illustration.**

The WSR live phone-in radio show will be broadcasted through **Wawatay News** on **Tuesday, December 6th, 2022 at 11:00am – 12:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at **1:00pm – 1:30pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

December 14, 2022

Chief Wayne Moonias
Neskantaga First Nation
P.O. Box 105
Lansdowne House, ON
P0T 1Z0

Dear Chief Moonias:

We would like to bring up several activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Consultation Progress Report Round 1

On October 28, 2022, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 1 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, December 14, 2022, the package status indicates that it has been successfully delivered to your community on November 15, 2022.

The Consultation Progress Report is provided as per the requirements of the Terms of Reference (ToR) for the provincial Environmental Assessment (EA) process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA.

The Consultation Progress Report provides an overview of engagement activities to-date, as well as community-specific summaries of engagement and community feedback and input provided by community members. Consultation Round 1 of the Engagement and Consultation Program occurred in Spring/Summer 2022. Key milestones and topics covered in this round of consultation included:

- Overview of EA/IA process;
- Consultation to date and what we have heard (i.e. during the ToR phase);
- Study Plans for discipline studies (e.g., wildlife, fish, health, etc.);
- Criteria and indicators for evaluation and selection of a preferred route and Project effects assessment;
- Approach for evaluation of alternatives (e.g., routes, aggregate source areas);
- Overview and status of baseline studies;
- Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program; and,
- Consultation approach and next steps.

Engagement Opportunities

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

We welcome any feedback and input your community may have on the Consultation Progress Report, so that issues or concerns can be addressed in the EA/IA process for the Project. Should your community have any questions or comments on the Consultation Progress Report, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Website: www.neskantaga.com

February 7, 2023

To: Webequie Supply Road Team

Chief Cornelius Wabasse

Marten Falls Community Access Road Team

Chief Bruce Achneepineskum

Re: upcoming ATRI Forum

Dear Webequie Supply Road Team and Marten Falls Community Access Road Team,

We are writing today to inform you that Neskantaga will not be participating in the Aboriginal and/or Treaty Rights and Forum this week. As you know, Neskantaga is engaged in ongoing litigation with Ontario and the road proponent First Nations in relation to the flawed consultation process undertaken for these environmental/impact assessments. We have not provided our free, prior and informed consent to the proposed projects.

In that litigation, Neskantaga has set out very clearly what we consider to be a meaningful process that would respect our own laws and protocols in respect of decision-making on our homelands. We expect Ontario to come directly to Neskantaga to engage with us according to these protocols. To date, we have not received any offer from Ontario or the proponents to move forward in this way.

Further, the format proposed for the Forum engages constitutionally protected rights and as such, the utmost care must be taken in its design. We are not confident that Ontario and the proponents have put in place the necessary safeguards to have meaningful conversations about "the Rights and Interests of our community", which are integrally linked to our laws, protocols, practices and Indigenous knowledge of our territory. We are also confused as to who is hosting the Forum. The invitation is coming from the road proponents, but Ontario is identified as the "host". The Impact Assessment Agency is also apparently leading some of the discussions. Each of these parties is in a different relationship vis a vis Neskantaga.

We do appreciate the attempt to integrate discussions on all three so-called road projects, which we have long argued are actually three segments of one road project, intended to serve a potential mine site. However, the format of this proposed Forum cannot meet the other conditions we have set out in relation to a meaningful consultation. This proposed road has the obvious potential to bring profound changes that will irreversibly impact our relationship to our homelands and our lifeways as an Indigenous people. As such, it demands a thorough and meaningful consultation according to our own community protocols.

Sincerely,

Chief Wayne Moonias

Neskantaga First Nation

March 9, 2023

Dear Chief,

Radio Show and Livestream

The Webequie Supply Road (WSR) Project Team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: The Alternatives Assessment Process – An Overview.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on March 14th, 2023 at 12:00pm - 1:00 pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.

Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team will begin virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project Team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the VR Open House created specifically for your community.

At any time, you can access additional information on the WSR website: **supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Chief Wayne Moonias
Neskantaga First Nation
P.O. Box 105
Landsdowne House, ON
P0T 1Z0

Re: Socio-Economic Primary Data Collection Program
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Moonias,

We hope that this letter finds you and your community well.

As you know from our previous correspondence, Webequie First Nation is the proponent of the Webequie Supply Road Project, a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities.

Today, we are writing to confirm whether your community has an interest in participating in the Socio-Economic Primary Data Collection Program and is follow-up to the invitation letter sent to you on December 20, 2021. In this letter, we outlined the purpose of the socio-economic study, types of information we would like to gather and suggested primary data collection methods (e.g., community surveys, focus groups, key informant interviews). Primary data is information collected first-hand directly with community members about issues and conditions of the community.

We have a timeframe for the EA/IA process to complete our studies and document the results. Our goal this year is to complete a draft Socio-Economic Existing Conditions Report, which documents the socio-economic baseline conditions of communities. We would like to collaborate with your community to discuss and collect socio-economic information and/or verify information gathered to-date based on current desktop research to help us to understand existing social and economic conditions.

The preliminary “Valued Components” for the EA/IA, which represent aspects of social and economic conditions that are important to you and the community, and require information gathering are as follows:

- Population and Demographics – including population, age, gender, etc.;

- Housing and Accommodations – including housing demand/affordability/supply/quality and number of people living in a home;
- Social Services and Infrastructure – including supply and demand for education, childcare, water, waste, energy, and communications;
- Transportation – including volume of, and demand for, road and air transportation;
- Community Well-Being and Safety – including social cohesion and culture, participation in social and/or cultural events, domestic violence, physical/sexual assault, air quality and noise;
- Land Use Compatibility – including existing and proposed land uses;
- Recreation and Tourism – including land/waterway access and resource availability;
- Provincial Parks and Protected Areas – including areas of natural and scientific interest and conservation reserves; and
- Regional and Local Economy – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity.

In order to meet the schedule for the completion of the EA/IA study, we respectfully request an indication of your community's interest in participating in the Socio-Economic Primary Data Collection Program by **April 17, 2023**, as it is the Project Team's intent to complete the socio-economic primary data collection to inform the draft baseline report by **June 16, 2023.**

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Heather Swan, Deputy Project Manager
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Michael Fox, Regional Consultation Coordinator, Webequie Supply Road
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, SNC-Lavalin Inc.

March 22, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Alternatives Routing in the Preferred Corridor.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, March 28th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

March 30, 2023

Dear Mr. Falconer,

In recently reviewing my records, I note that I did not provide a formal reply to your letter dated June 15, 2022. I, therefore, take this opportunity to do so.

As you know, Cassels Brock & Blackwell LLP (Robert Cohen and Sandra Gogal) were retained as legal counsel to The Webequie Fist Nation ("WFN") in respect of 'The Ring of Fire' application commenced by Chief Moonias and Neskantaga First Nation in Court File No. CV-21-00672552-0000 (the "Application"). WFN was not named as a party to the Application; however, by way of an endorsement of Justice Koehnen dated November 10, 2022, the court invited WFN to intervene or otherwise participate in the Application "on the same basis as Marten Falls", provided that WFN complied with Justice Koehnen's court-ordered schedule. Since being provided with notice of the Application, WFN, though its legal counsel, has indeed participated in the Application in accordance with the existing court orders.

As you also know, the parties to the Application have provided numerous affidavits pertaining to, among other things, the consultation process for both the "Marten Falls Community Access Road" and the "Northern Road Link" (as those terms are defined in your letter). The parties are scheduled to conduct cross-examinations and file facta with the court in the coming months, and WFN will continue to participate in these proceedings going forward. In so doing, we anticipate that WFN's conduct in respect of the consultation process for the "Northern Road Link" will be the subject of court review, along with the court's review of the consultation process for the "Marten Falls Community Access Road".

In light of the foregoing, I expect that the Application proceedings, and the court's ultimate decisions in those proceedings, will be used to assess and to address any issues properly raised by your clients pertaining to the "Northern Road Link". Accordingly, I trust that this letter fully and satisfactorily responds to the inquiries raised in your June 15, 2022 letter.

Yours Very Truly,

Michael Fox
WSR Project Manager

cc. Cassels (Robert Cohen and Sandra Gogal)
cc. Rodney Northey
cc. Kisha Chatterjee

April 4, 2023

Dear Chief Moonias,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Monday, April 17th from 12:00pm-1:00pm EST** for Neskantaga First Nation, where there will be a presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/87587313586

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 875 8731 3586**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/neskantagafn/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols.

You can access additional information on the WSR website: **www.supplyroad.ca**

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca. On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

April 6, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternative Road Corridors.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Wednesday, April 12th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to serene.spence@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

May 24, 2023

Dear Chief,

We would like to provide a **correction to the times** provided on our previous correspondence related to the Webequie Supply Road (WSR) project radio show and livestream happening today.

Radio Show and Livestream
The WSR Project team will be resuming the live streaming and radio call-in show today. The topic of the upcoming session is: **WSR Presents: Evaluation of Alternatives for Supportive Infrastructure (i.e., camps, laydown areas, aggregate/rock sources, access roads).**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Wednesday, May 24th, 2023 at 6:00pm – 7:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

The livestreaming event is scheduled on the same day as the above radio show at **7:30pm – 8:00pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we apologize for any confusion this may have caused and we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 1, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Proposed Criteria and Indicators for Evaluation of Alternatives for Supporting Infrastructure.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on **Tuesday, June 6th, 2023 at 12:00pm – 1:00pm (EST).** We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

The livestreaming event is scheduled on the same day as the above radio show at **2:00pm – 2:30pm (EST)** which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Virtual Information Sessions for Round 2 Part 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 5, 2023

Chief Christopher Moonias
Neskantaga First Nation
P.O. Box 105
Lansdowne House, ON
P0T 1L0
Sent via email

Re: ATRI Forum Letter from Neskantaga First Nation on February 7, 2023

Dear Chief Christopher Moonias,

The Webequie Supply Road (WSR) Project Team received a letter from former Chief Wayne Moonias, dated February 7, 2023, in response to the Aboriginal and/or Treaty Rights and Interests (ATRI) Forum held in Thunder Bay on February 8th and 9th, 2023. We appreciate you taking the time to respond and provide Neskantaga First Nation's perspectives.

We note your expressed expectation that the Province of Ontario (the Province) come directly to Neskantaga First Nation to engage according to your consultation protocols and note that Provincial representatives have been copied on your letter. We are also aware of the ongoing litigation. Although we cannot speak on behalf of the Province, the WSR Project has yet to receive a clear and concise document outlining Neskantaga First Nation's consultation protocol. What we have received is Neskantaga First Nation's "Community Protocol Development". We have made attempts to garner a better understanding of how this protocol should be used in relation to the WSR Project. As the proponent to the WSR Project, we have and will continue to try to engage and consult with your community one-on-one.

You will recall that in one of our latest attempts to engage one-on-one, we sent you a letter on December 20, 2022, attempting to initiate conversation and engage the community on the Project, either as an in-person or a virtual meeting. Since then, we have sent letters bi-weekly with engagement options. No response has been received. The Project has repeatedly attempted to engage in a conversation with Neskantaga First Nation and will continue to do so, as your community feedback is important to help inform the WSR Project. As we have expressed in many of our correspondence to Neskantaga First Nation, we are requesting to meet with you to learn about your interests in the Project and how you would like to be involved.

And further to the above, to ensure that Neskantaga First Nation is being kept up to date and informed on the Project we continue to send monthly updates on a variety of topics including: Project updates, Indigenous Knowledge (IK) Program, invitations to the Project Radio and Livestreaming Series, and a host of other outreach activities.

Regarding your concerns about the necessary safeguards being in place at the ATRI Forum, the ATRI Forum was not a public event. It was a closed Forum with invitations extended to those Indigenous Communities who are scoped into the Webequie Supply Road (WSR), Northern Road Link (NRL), and Marten Falls First Nation Community Access Road (MFFN CAR) project assessments. As described in the invitation, the Forum was set up with a large meeting area and 6 private, individual breakout meeting rooms (one for each Project, the

Province, the Impact Assessment Agency of Canada (IAAC), and WSR Project Team. Participants met together as a group in the morning of Day One for presentations. Following that, Participants had an opportunity to meet one-on-one with representatives from each of the Projects (MFFN CAR, WSR, NRL), the Province and IAAC. All meetings were confidential and as is standard practice, any information shared by participants during those one-on-one breakout sessions will be provided back to those Participants for review and comment. If you had concerns about the Forum and how shared information was going to be protected, we would have been happy to have had an advance discussion with you.

We need to reiterate that the Forum is a step in working towards developing a shared understanding of ATRI within each distinct Project area. By developing an understanding of Rights and Interests we will be better positioned to engage with Indigenous Communities about potential Project impacts. Together, we can then look at ways of avoiding, mitigating or reducing potential negative impacts while enhancing potential positive impacts related to ATRI. As a First Nation proponent, we understand that the conversations at the Forum were preliminary in nature and that communities need time to think, reflect and discuss with leadership and other community members on what they want to share with us regarding ATRI. We continue to offer to meet individually with all Indigenous Communities, including Neskantaga First Nation, to further discuss potential impacts to ATRI and we will continue to do so throughout the assessment processes.

We understand that the Province, the Federal Government, and us as a Proponent, all have different relationships with Neskantaga First Nation. As noted in the invitation under the Preliminary Agenda, our intent was to discuss these different relationships and/or duties/roles as it relates to assessing potential impacts to ATRI. A significant portion of the agenda for Day One was dedicated to this topic. Representatives from the Project Teams, the Province and IAAC were also available for one-one-one meetings to discuss these distinct relationships and duties/roles. WFN thought it would be advantageous to provide multiple opportunities to meet with different Project representatives from the MFFN CAR, WSR and NRL over a two-day period at one location.

We would like to extend another offer to meet with you individually to discuss how we can engage and consult Neskantaga First Nation on the WSR Project. To better understand the appropriate ways to engage with Neskantaga First Nation, we respectfully ask that you provide us with a current version of your consultation protocol so that we can review and prepare ourselves for a meeting.

Appreciating that Neskantaga First Nation has recently held elections, we hope that you will distribute this letter to Neskantaga First Nation Council members and others as necessary.

We look forward to hearing from you.

Sincerely,

Chief Cornelius Wabasse

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.
Michael Fox, Regional Consultation Lead, Indigenous and Community Engagement

June 6, 2023

Dear Chief Moonias,

We hope that this letter finds you and your community well.

We are following up on correspondence sent to you on December 13, 2021 regarding the Webequie Supply Road (WSR) Indigenous Knowledge / Indigenous Land and Resource Use (IKLRU) Program. The Project Team also phoned the band office on January 17, 2022 and sent an email on January 20, 2022 to follow up and advise that the IKLRU Program has started and to confirm if your community is interested in participating. On January 20, 2022, David Peerla responded indicating that Neskantaga First Nation was focused on community health and safety due to COVID-19 and the Omicron variant. In response, the Project Team sent an email on February 4, 2022 to address Neskantaga First Nation's concerns and provide various virtual engagement options. Since then, we have not received a response regarding your interest in participating in the Program.

As you know from our previous correspondence, Webequie First Nation is the proponent of the Webequie Supply Road Project, a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario Environmental Assessment Act and an Impact Assessment (IA) under the federal Impact Assessment Act is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities.

The IKLRU Program is a critical component of the information base upon which the assessments will rely. The information generated through the Program will be used in concert with scientific approaches, and both knowledge systems will be given equal consideration in forming the foundation for baseline conditions, predicting potential project effects, including potential impacts to your inherent Indigenous rights and interests.

We understand that Neskantaga First Nation currently has an active funding agreement with the Province of Ontario to participate in the IKLRU Program for the WSR Project.

We want to learn more about your community from your perspective on a range of topics, including:

- Community history

- Community values, beliefs, aspirations and challenges
- Cultural and spiritual connections with the land
- Traditional land and resource use in the region
- Exercise of inherent Indigenous and treaty rights

By documenting Indigenous knowledge and land and resource use information as part of the EA/IA, it may assist your community in understanding your Aboriginal and treaty rights and interests, and ensuring they are protected.

We have a timeframe for the EA/IA process, to complete our studies and document the results. Our goal this year is to complete a draft baseline conditions report, which documents the existing conditions of communities and the environment. We want to work closely with you to add your community's knowledge to the report.

Some communities may have documented this type of information as part of a community-based land use planning process. This information would be very useful to review with your community, either in a meeting, or to share any documentation with the Project Team, under the condition of confidentiality and non-disclosure to any other Party.

In order to make progress towards the completion of the EA/IA process, we respectively request an indication of your interest in participating in the IKLRU Program by the end of June 2023.

All knowledge that is shared will be safeguarded with a formal Confidentiality and Data Sharing Agreement, which will ensure that all input from the community will remain the ownership of the community, and that no information will be shared beyond the Project Team, without the consent of the community.

As the proponent, Webequie First Nation bears the responsibility for the Project and the assessment processes being applied to it. Like your community, we are traditional stewards of the land, and we must make certain that any development in the area is undertaken properly, and that the rights, interests, values, traditions, concerns, and aspirations of fellow communities are appropriately addressed within the assessment context, during the life of the Project, and beyond. It is in this spirit that we are reaching out to collaborate with us. Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 14, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Proposed Aggregate / Rock Source Areas.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, June 20th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

Upcoming Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants

	(Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Creating Community Awareness of Upcoming Engagement

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 22, 2023

Dear Chief Moonias,

As you may know, the Terms of Reference (ToR) for the Webequie Supply Road (WSR) Project was approved on October 8, 2021. Since the ToR was approved, the WSR Project Team has been working on the Environmental Assessment / Impact Assessment (EA/IA) phase of the Project. The Project Team would like to share with you and your community the EA/IA activities including: project update, consultation and engagement to date, alternatives assessment process, and next steps.

We will be offering a community information session, via Zoom, on **Monday, July 4th between 12:00pm-1:00pm EST** for Neskantaga First Nation, where there will be the second part of the presentation on the WSR Project activities for Consultation Round 2. We anticipate the community information session to be approximately 1 hour in length with a presentation and question and answer period. The WSR Project Team has a platform to allow for real time translation to accommodate community members during the session. Details for the information session are as follows: https://us06web.zoom.us/j/86760586141

We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the session at 1-844-424-0500. You may also call into the zoom session at 1 (204) 272-7920 or 1 (647) 374-4685. Upon calling in, you will be asked for the following information: **Meeting ID: 867 6058 6141**

In addition, the WSR Project Team has made available a Virtual Reality (VR) Open House where you and your members can access further information about the project, the studies being undertaken and provide comments. Please visit: **https://www.supplyroad.ca/neskantagafn/**

To help create awareness, facilitate postings, and increase participation for the community information session, the WSR Project Team is attaching a poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the poster and we can mail them to your community for local distribution.

If you want additional engagement sessions with your Council, members, advisors and staff, we would be available to meet virtually or in-person following COVID protocols. At any time, you can access additional information on the WSR website: **www.supplyroad.ca**. Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.

On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

c.c. Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

June 28, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Bi-Weekly Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Construction Camps.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Wednesday, July 5th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

July 12, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) project that will be of interest to your community.

Radio Show and Livestream

The WSR Project team will be resuming the live streaming and radio call-in show next week. The topic of the upcoming session is: **WSR Presents: Road Foundation Design.**

The WSR live phone-in radio show will be broadcasted through Wawatay News on Tuesday, July 18th, 2023 at 12:00pm – 1:00pm (EST). We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may text during the radio show at 1-844-424-0500. You can also email your questions to mckenna@indigenousengagement.ca.

In addition, a livestreaming event is scheduled on the same day as the above radio show at 2:00pm – 2:30pm (EST) which is accessible on the WSR Project Website: https://www.supplyroad.ca/stream/. You may also call with questions on the same toll-free number provided above during the live stream.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in-community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with

	a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has started conducting virtual information sessions for each community with the second part of the presentation for round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions/** to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

Please do not hesitate to contact me at 807-472-6147 or at michael.fox@supplyroad.ca.
On behalf of the WSR Project team, we wish you and your community continued health and wellness.

Sincerely,

Michael Fox

Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

July 26, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.

One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Virtual Information Sessions for Round 2

The WSR Project Team has been conducting virtual information sessions for each community with the second part of the presentation for Consultation Round 2. These are one-on-one sessions where the Project Team shares information about the EA/IA activities including consultation and engagement to date, study plans, assessment approach, valued components, Indigenous knowledge, consideration and evaluation of alternatives, and consultation approach and next steps. The session consists of a presentation on the WSR Project activities followed by a question-and-answer period. The WSR Project team also has a platform to allow for real time translation to accommodate community members during the session.

You can visit **www.supplyroad.ca/sessions**/ to view the upcoming schedule. In the weeks prior to your community's session, the Project Team will send a link to your session's registration page and to the Virtual Reality (VR) Open House created specifically for your community.

November 8, 2023

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience and in any method that you and your community prefer.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time, some communities may not wish to participate in the form of in-person meetings and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person engagement methods. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Public Information Center #2

The WSR Project team held Public Information Center (PIC) #2 in Thunder Bay on October 3rd for Indigenous communities & 4th for the general public and Timmins on October 12th for the general public. The PIC's were held to provide interested parties with an opportunity to learn about the ongoing assessment of alternatives that is being conducted as part of the EA/IA study and provide feedback. The PIC consisted of a presentation and an informal drop-in center with display information about the Project. Project team representatives shared information on the EA/IA process, studies being conducted, criteria for evaluation of route alternatives and alternative locations for supportive infrastructure (e.g., aggregate source areas, construction camps), including results from the assessment, the feedback we have heard to date, and future consultation and engagement opportunities.

If you were unable to attend the PIC #2, you can find the formal notice, livestream, more information on the study and progress, and updates on our project website: https://www.supplyroad.ca/

Aboriginal and/or Treaty Rights and Interests Forum

Building on the momentum of the first Aboriginal and / or Treaty Rights and Interests Forum in February 2023, Webequie First Nation and Marten Falls First Nation encourage you to participate in a follow-up Forum on November 21-23, 2023 at the Valhalla Inn in Thunder Bay, to discuss potential impacts to northern Indigenous communities' Aboriginal and / or Treaty Rights and Interests as they relate to the WSR, Northern Road Link, and Marten Falls Community Access Roads Projects.

The Purpose of this Forum is to create a respectful, culturally sensitive, and collaborative space to develop and/or confirm our understanding of the Project areas (WSR, MFCAR, and NRL) as your Aboriginal and / or Treaty Rights and Interests may be impacts by these Projects. Please note the purpose of this event is to discuss Aboriginal and / or Treaty Rights and Interests and not to collect Indigenous Knowledge.

If you have any questions regarding the Forum or need additional information to engage your community, please do not hesitate to reach out to us at the contacts below.

Stay Up to Date

Don Parkinson, Consultation Lead, SNC-Lavalin Inc.
Craig Wallace, Project Manager, SNC-Lavalin Inc.

January 25, 2024

Chief Christopher Moonias
Neskantaga First Nation
P.O. Box 105
Landsdowne House, ON P0T 1Z0

Re: Round 2 Consultation Progress Report
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Moonias:

We hope that this letter finds you and your community well.

As you are aware, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR or the Project), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake. An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic and cultural well-being of communities.

We are providing the attached Consultation Progress Report 2 (electronic and hard copy), which summarizes and documents Round 2 of the Engagement and Consultation Program with your community for your review and comment.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1;
- Overview of results of baseline studies to characterize existing conditions within the study area;

- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/ rock source areas, construction camps, access roads) from multifactor analysis, including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design); and
- Next steps and schedule.

Webequie First Nation is committed to ongoing engagement with your community through the EA/IA process. Our Project Team is available to discuss the contents of the Consultation Progress Report 2, and we hope this provides an additional opportunity for the community to learn about the Project and to raise any concerns or comments about potential effects to your community and the environment more broadly that should be considered in the EA/IA.

Webequie First Nation is tentatively planning to conduct Consultation Round 3 for the Project from Winter 2024 to Winter 2025. The following milestones and topics are proposed to be addressed as part of engagement and consultation activities for this round:

- Summary of input received from Consultation Round 2;
- Summary of preliminary effects assessment of the Project, including cumulative effects;
- Proposed impact management, mitigation and follow-up monitoring program; and
- Next steps in EA/IA process.

We welcome any feedback and input your community may have on the attached Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Thank you very much and we look forward to hearing from you soon.

Sincerely,

Michael Fox

Regional Consultation Lead
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Sasha McLeod, Special Project Officer, Ministry of the Environment, Conservation and Parks
Craig Wallace, Project Manager, AtkinsRéalis Canada Inc.

2

January 31, 2024

Dear Chief,

We would like to bring up a number of activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week with changes to the order of topics that was provided on the January 2024 newsletter. See below the updated schedule of topics for February 2024:

Date	Topic
Monday, February 5, 2024	Road Access and Control Issues
Monday, February 12, 2024	Minimizing Project Impacts
Tuesday, February 20, 2024	Construction Camps and Other Opportunities
Monday, February 26, 2024	Bridges and Water Crossings

The topic of the upcoming session is: **WSR Presents: Road Access and Control Issues.**

The livestreaming event is scheduled for **February 5th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.

The WSR Project Team is offering opportunities for engagement in the proposed methods below. We understand that at this time some communities may not wish to participate in the form of in-person meeting and engagement given current public health concerns. Therefore, the WSR Project Team will continue offering both virtual and in-person methods of engagement. Please identify which of the options would be appropriate to engage with you, your team, and your community, as well as suitable dates and times to engage to discuss the EA/IA process.

Engagement Options

Method	Description
Focus Group Sessions	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA. The session will be facilitated by the WSR Project Team to gain feedback from the perspective of diverse population groups (women, elders, youth, land users, etc.)
Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

Stay Up to Date

Community Sessions	Community information sessions can be conducted, whereby the WSR Project Team will discuss the EA/IA with a question-and-answer period at the end of the presentation.
Drop-In Sessions	Community members can drop-in at a safe location to discuss the EA/IA with the WSR Project Team.
Virtual Focus Groups	Open discussion with 4-6 participants (Council, staff, community members, or technicians) to discuss the EA/IA facilitated by the WSR Project Team using either Zoom, Microsoft Teams, Google Meet, GoToMeetings, Skype, Webex, or any other videoconferencing platforms that Indigenous leaders and staff are currently using to meet with government officials, health agencies, lawyers, advisors, board meetings, tribal council meetings, Chiefs assemblies, online conferences, etc.
Virtual Community Presentation	Using the above range of videoconferencing platforms, the WSR Project Team will discuss the EA/IA to community members with a question-and-answer period at the end of the presentation.
One Hour Teleconference	Using a phone and fax, the WSR Project Team will fax you the EA/ IA process presentation and set up a conference call to go through the presentation based on the area of interest your team wants to focus on and answer any questions
Local Radio Call In Show	Using the local community radio, the WSR Project Team can present the EA/IA process with a local translator that the WSR Project team will pay for to explain the EA/IA. We can also provide a translator on our end.
Online Surveys	Using online survey methods, community members can provide feedback on the EA/IA.

DRAFT

1. Project Context

The proposed Webequie Supply Road (WSR, or 'the Project') is a proposed new all-season road approximately 107 kilometres (km) in length from the Webequie First Nation Reserve to the mineral deposit area near McFaulds Lake (also referred to as the Ring of Fire). The Project location is shown on Figure 1-1. The preliminary corridor for the road consists of a northwest-southeast segment running 51 km from the Webequie First Nation Reserve to a 56 km segment running east-west before terminating near McFaulds Lake. A total of 17 km of the corridor is within the Webequie First Nation Reserve.

The information provided in this document is preliminary at this time, and it has been prepared with information that is known specifically for Neskantaga First Nation. This is a living draft document that has yet to be reviewed and validated by the Community. Currently, information gathered has been made available through limited local resources as well as contemporary academic literature. Information on existing conditions is used to provide a baseline understanding of the valued components of the community. Potential effects of the Project on valued components will be assessed by comparing baseline conditions to those expected to result from the construction and operation and maintenance of the Project.

Webequie First Nation is the proponent for the Project. The Project Team led by Webequie First Nation is striving to gather as much Anishinaabemowin/Anishinaabe/Mushkegowuk (Cree) Indigenous Knowledge as it relates to the Project and to help inform the Socio-Economic Baseline. This document will be continuously updated when information from the Webequie First Nation and other communities is shared with the Project Team.

The gathering of important Indigenous Knowledge takes time due to the limited resources of communities as well as following culturally relevant protocols, which require relationship building and consistency to establish trust.

Webequie is an Anishinaabemowin (Oji-Cree) Tawin (community) in Treaty No. 9 territory, located about 540 km north of the City of Thunder Bay. Anishinaabemowin is a blend of Anishinaabe (Ojibway) and Mushkegowuk (James Bay Cree).

Before the first settlers arrived, the Anishinaabe and Mushkegowuk sustainably shared the territory and lived Mino Bimaadzwin (The good life) through guidance from Anishinaabe law, which governs their Kii'manitu'meano-goonan (Creator given) responsibilities to assure a good relationship with the Land (Webequie First Nation, 2021).

Generally, the Anishinaabe and Mushkegowuk shared a common spiritual view with Indigenous Nations across the continent, and that is based on a profound respect for Shkagamik-Kwe (Mother Earth), which was also a relationship based on reciprocity (Thomas, 2020; Helin, 2008).

As the proponent for the Project, Webequie like many Indigenous Nations and communities across Turtle Island (North America) have been living with the effects of colonial impositions since the arrival of Europeans to the continent and the formation of Canada. The impositions, spanning more than seven generations have had a reverberating impact on the Anishinaabemowin. These impacts should be understood while considering 'baseline' Socio-Economic data because Webequie the proponent for the Project, has been striving for Mino Bimaadzwin and to strengthen their Nation in a holistic way while reclaiming culture which feeds into baseline data as well as Aboriginal and Treaty Rights and Interests.

DRAFT

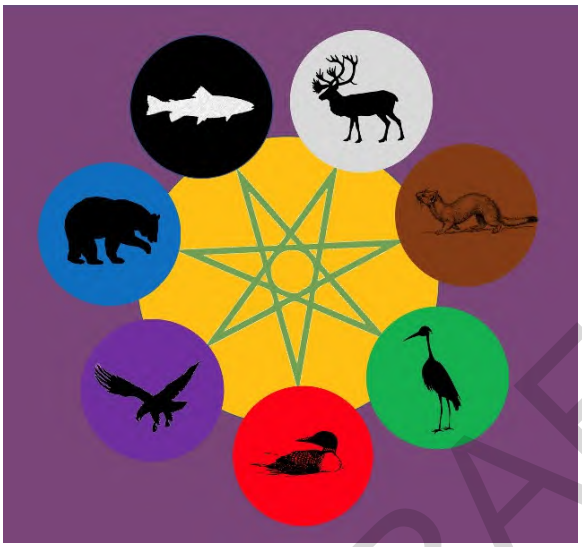
Before settlers arrived, Indigenous Nations governed themselves through their own governance structures and Natural laws. Anishinabek and Mushkegowuk governed themselves through a clan-style system, as shown on Figure 1-2.

Typically, the Anishinabek govern themselves through a clan-system which includes seven main clans with many sub-clans. Each clan has different responsibilities within the Nation at large.

Figure 1-2: Representation of the Anishinabek Dodemag (the "Clan-System")



Source: Atikameksheng Anishnawbek, 2023.

Colonial impacts have been devastating in Anishinaabe and Mushkegowuk Homelands. Before the Hudson Bay Company (HBC) established itself and exploited fur-bearing animals to support trade in Europe, the people lived sustainably with the Land. Fur-bearing animals were hunted to near extinction, with the beaver population having been nearly decimated, which resulted in starvation mode for the people living in their homelands. (SNC-Lavalin, 2022). Before that time, Anishinaabemowin had never before been subject to a commerce style economy (SNC-Lavalin, 2022).

The Indian Act, implemented in 1876 had an adverse impact on Indigenous Peoples across Canada. Perhaps the most harm was done while Indigenous children were forced to attend Indian Residential Schools, which were either government-run, or church run institutions.

A timeline has been developed to better understand the effects of legislation, encroachment on rights as well as reconciliation efforts, as shown in Table 1-1.

DRAFT

Table 1-1: Timeline of Effects on Indigenous Peoples of Canada from Legislation, Encroachment on Rights and Reconciliation Efforts

Timeline	Effects
Hudson Bay Company, 1670	The HBC, officially established itself in 1670 to set up trade for the fur industry (primarily beaver pelts). HBC set up its first official post in 1673 in Moose Factory, near the southern hub of James Bay and subsequently built a small outpost along the Albany River in 1743. The exploitation of animals for fur in the region resulted in a starvation crisis for the Anishinaabe and Mushkegowuk. It took the beaver population a considerable time to recover (SNC-Lavalin, 2022).
British North America Act, 1867	The *British North America Act* made the federal government responsible for Indigenous Peoples (Government of Canada, 2011).
Royal Proclamation, 1763	Established constitutional basis for future negotiations of treaties and confirmed the protection of lands for the exclusive use by Indigenous Peoples (Hall, 2019).
Indian Act, 1876	Imposed the Reserve system 1876 – ongoing. Forced attendance at Indian Residential Schools 1894 – 1996. Outlawed ceremonies: 1876 – 1951. Oppressed women's rights: 1876 – ongoing. Imposed the band council system 1876 – ongoing. 60's Scoop – Gave provinces jurisdiction to 'scoop' Indigenous children from their homes. There have been class action lawsuits to address the loss of culture and identity.
James Bay Treaty (Treaty No. 9), 1905	Signed treaties with Anishinaabe, Mushkegowuk, and Anishinaabemowin. Indigenous Peoples in the territory wanted protections for lands, resources and fur-bearing animals.
The Mines Act, 1906	Established staking and prospectors' licenses for exclusive rights to stake and work upon Crown lands.
Ontario Registered Trapline System, 1946	Imposed sole ownership of trapping areas, which did not align with cultural values (SNC-Lavalin, 2022).
Royal Commission on Aboriginal Peoples, 1996	Mandated to investigate and propose solutions to the challenges affecting the relationship between Aboriginal Peoples, the Canadian government, and Canadian Society.
Truth and Reconciliation Commission of Canada, 2015	Final Report, Calls to Action, Indian Residential School settlement agreement (Truth and Reconciliation Commission of Canada, 2015).
National Inquiry into Missing and Murdered Indigenous Women and Girls, 2019	Reclaiming Power and Place: The Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls (MMIWG, 2019).

DRAFT

It is important to tell the story of Indigenous Nations in order to understand how they have arrived at their current Socio-Economic conditions and Indigenous Knowledge. Part of that story includes not only the history of the Indigenous Nations, but also that of Indigenous Peoples in Canada.

COMMUNITY SETTING

DRAFT

AtkinsRéalis - Confidential

2. Community Setting

2.1 Community Overview

Neskantaga First Nation is an Anishininiimowin (Oji-Cree) Nation in Treaty No. 9 territory located in Northwestern Ontario, approximately 435 km north of Thunder Bay. The community is situated on the north shore of Attawapiskat Lake. It is one of the closest Indigenous communities to Webequie First Nation, which is located less than 100 km to the north.

The traditional language spoken in Neskantaga is Oji-Cree, a dialect of Anishinaabe with influences from the Cree language and is considered a distinct language and culture. Neskantaga is a Nishnawbe Aski (Treaty No. 9) First Nation community.

Neskantaga First Nation has a registered population of 501 with 306 members living on-reserve(CIRNAC, 2023f). It is a fly-in community with seasonal winter road connection from Pickle Lake (Ontario, 2023a). Neskantaga First Nation follows a Custom Electoral System, with one Chief, and four Councillors elected every two years. The next election will be in March 2025.

The community is formally affiliated with the following political territorial organizations:

- Nishnawbe Aski Nation;
- Matawa First Nations; and
- Chiefs of Ontario.

2.2 Community History

By 1900, HBC operated a northern outpost known as Lansdowne House, on Attawapiskat Lake (Long, 2010). The Neskantaga First Nation people settled here. This was once part of a major trade route as it is surrounded by the Attawapiskat and Otoskwin Rivers (Neskantaga First Nation, 2023).

In 1905, Neskantaga First Nation was considered part of the Fort Hope People at the time of the signing of Treaty No. 9 (Driben and Trudeau, 1983; Long, 2010). The Neskantaga people were included until 1985 when the federal government declared the three communities as separate Bands, the community members of the Neskantaga, Nibinamik, and Webequie First Nations were considered members of the Fort Hope Indian Band, as it was known at the time. Neskantaga moved from their original community at Lansdowne House, near the former HBC trading post, as the swampy land limited expansion of the community (CBC, 2022). The relocation occurred in the 1980s to the location known as Grandmother's Point approximately 20 km west up-shore on Attawapiskat Lake (CBC, 2020).

2.3 Community Values and Aspirations

Neskantaga First Nation is closely tied to the land and the community strives to balance conservation and resource development along with economic development (Neskantaga First Nation, 2023). Neskantaga First Nation has outlined in their value statement that they will treat all members with respect and dignity and treat their Elders in high esteem. The community will work together to resolve conflict and differences and work together to confirm the development of a self-reliant community (Neskantaga First Nation, 2023).

DRAFT

Neskantaga First Nation has currently taken legal action against the Ontario government as they have outlined that Ontario has failed to fulfil its duty to consult and accommodate the consultation period for approval of the ToR for the Marten Falls Community Access Road (Raventrust, 2021). Neskantaga has outlined that "based on the current plans for the construction of roads, mines and other types of infrastructure in the region, Neskantaga will suffer irreversibly negative effects to its Aboriginal and Treaty Rights and titles". These impacts will affect the people, land, territory and resources of Neskantaga" (Neskantaga Notice of Application, 2021). Neskantaga First Nation has requested that Ontario retract the draft ToR and "restart the Ring of Fire consultation process to ensure it is mutually and equally co-developed, co-led and co-enforced by First Nations" (Raventrust, 2022). A letter to the Environment Ministry dated October 13, 2020, states: "Neskantaga's land use options will be permanently altered by the project as the WSR will bisect Neskantaga's lands and change forever the options for ensuring the continued practice of Neskantaga's way of life on Neskantaga territory (Porter, 2020). In 2021, Neskantaga First Nation signed a moratorium on new developments in the Ring of Fire (Schlote, 2023).

Neskantaga First Nation is one of 10 northern First Nations who have launched a lawsuit against the Ontario and federal government in April 2023 (McIntosh, 2023). They have requested that the federal government be barred from making any decisions about how land could be used without Indigenous consent. The lawsuit centres on Treaty No. 9 and the contrast between the verbal and written promises of Treaty No. 9 as recorded (McIntosh, 2023). The Nations are arguing that they did not cede or surrender their territories and that Treaty No. 9 did not give the Ontario government the right to allow resource extraction (McIntosh, 2023).

DRAFT

SOCIAL ENVIRONMENT

DRAFT

AtkinsRéalis - Confidential

3. Social Environment

3.1 Population and Demographics

Population and demographic data are important tools to assess Socio-Economic conditions in communities, as these data can identify vulnerable groups, the effects on vulnerable population groups such as women, disable persons, Elders and youth, segments of the population that will either benefit or be negatively impacted (directly or indirectly) by the Project, and barriers to participation for local under-represented groups. The existing conditions of population and demographics are described in this section using the following indicators:

- Population overview, including gender and age;
- Indigenous identity/Nationhood (First Nation, Métis, Inuit or non-Indigenous);
- Languages;
- Mobility and migration; and
- Immigration data is unavailable.

These indicators provide insights into the Socio-Economic existing conditions where the Project is being considered. They can help assess the potential effects of the Project and develop strategies to mitigate any negative effects.

3.1.1 Population Overview

The 2021 Census included for the first time a question on self-identified gender and added “at birth” to the gender question, which enabled cisgender, transgender and non-binary individuals to report their gender (Statistics Canada, 2023).

Table 3-1 below presents the forecasted population over the projection period broken down by self-identified gender. Population trends by self-identified gender are summarized as follows for Neskantaga First Nation:

- Over the projection period there is an increase in both the male and female populations;
- Between 2016 and 2043 the male population increases from 120 to 150, an 25% growth;
- Between 2016 and 2043 the female population increases from 115 to 145, a 26% growth; and

DRAFT

Table 3-1: Population Forecast by Self-Identified Gender, Neskantaga (2016, 2021, 2028, 2033, 2043)

Year	Total	Male	Female
2016	235	120	115
2021	240	125	120
2028	254	132	127
2033	262	138	133
2043	277	150	145

Source: Statistics Canada, 2017a; 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-2 presents forecasted population growth to 2043, broken down by age group. The age groups represented are 0 – 14 years, 15 – 64 years, and 65 years and over. The 15 – 64 years age group represents the potential labour force. Population trends by age group are summarized as follows:

- All age groups, except 65 years and over, are forecast to grow over the projection period.
- Between 2016 and 2043, the 0 – 14 years age group is projected to increase from 75 to 147, a 96% growth rate.
- Between 2016 and 2043, the 15 – 64 years age group is estimated to increase from 140 to 169, a 43% growth rate.
- Between 2016 and 2043, the 65 years and over age group is projected to decrease from 25 to 0 which is a 100% decline. The population distribution of this age group decreases over time as well, in comparison to other age groups which are all increasing.

Table 3-2: Population Forecast by Age Group, Neskantaga (2016, 2021, 2028, 2033, 2043)

Year	Total		0 to 14 years		15 to 64 years		65 years and over	
	Count	Distribution	Count	Distribution	Count	Distribution	Count	Distribution
2016	240	100%	75	31%	140	58%	25	10%
2021	240	100%	85	35%	145	60%	10	4%
2028	256	100%	101	40%	152	59%	3	1%
2033	274	100%	115	42%	158	58%	1	0%
2043	317	100%	147	47%	169	53%	0	0%

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

3.1.2 Indigenous Identity

Table 3-3 below presents the population by Indigenous identity for 2021. Indigenous identity for Neskantaga First Nation is summarized as follows:

- 100% of the population of Neskantaga First Nation identifies as First Nation.

Table 3-3: Population Forecast by Self-Identified Indigenous Population, Neskantaga (2021)

Indigenous Identity	Count	Distribution
First Nations	240	100%
Métis	0	0%
Inuk	0	0%
Non-Indigenous	0	0%
Total	**240**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

3.1.3 Languages

Table 3-4 below presents the languages spoken most often in homes at Neskantaga First Nation. Languages used by the Nation is summarized as follows:

- The majority of households speak English while at home at approximately 61.7%; and
- Indigenous languages are the second most spoken within the home at 38.3%.

DRAFT

Table 3-4: Language Used Most Often at Home, Neskantaga (2021)

Language	Count	Distribution
English	145	61.7%
Other Non-Official Languages	0	0%
Indigenous Languages	90	38.3%

3.1.4 Mobility and Migration

Table 3-5 below presents the mobility status of residents of Neskantaga First Nation in 2020. Mobility status refers to the status of a person with regard to their place of residence on Census Day in relation to their place of residence on the same date 1 or 5 years earlier (Statistics Canada, 2022a).

Residents are categorized as “non-movers” or “movers”. Persons who, on Census Day, lived in the same residence as they did on the same date 1 year or 5 years earlier are referred to as non-movers, and persons who, on Census Day, did not live in the same residence as they did 1 year, or 5 years earlier are referred to as movers. Movers include non-migrants, migrants, internal migrants, and external migrants. Mobility status of residents of Neskantaga First Nation is summarized as follows:

- 91% of residents were in the “non-movers” category, with a relatively equal distribution between the male (92%) and female population (91%).
- 9% of residents were in the “movers” category, with a relatively equal distribution between the male (8%) and female population (9%).

Table 3-5: Mobility Status of Residents, Neskantaga (2020)

Mobility Status	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
Non-movers	230	94%	120	92%	105	91%
Movers	15	6%	10	8%	10	9%
Total	**245**	**100%**	**130**	**100%**	**115**	**100%**

DRAFT

3.2 Housing and Accommodations

Housing and accommodations are an important factor among First Nations people living on reserves. In 2021, it was recorded that one in five First Nations people (21.4% or 224,280 people) reported that they consider the household they live in as being crowded (Statistics Canada, 2022a).. This problem is primarily due to houses not having enough rooms for families and multiple generation of families living in the same household. Furthermore, many houses in First Nation reserves are in poor condition and require major repairs.

The following sections provide information that will enable the assessment of effects on housing and accommodations by using the following indicators:

- Housing characteristics;
- Household characteristics; and
- Housing condition.

These indicators help with understanding existing Socio-Economic conditions of the community and predict potential effects of the Project on the community's quality of life.

3.2.1 Housing Characteristics

Table 3-6 below presents the total private dwellings and private dwellings occupied by usual residents in the Neskantaga First Nation. 'Private dwelling occupied by usual residents' refers to a private dwelling in which a person or a group of persons is permanently residing (Statistics Canada, 2019). Information on private dwellings in 2021 is summarized as follows:

- There are a total of 164 dwellings in community in 2021;
- Of the total private dwellings, 75 (45.7%) are occupied by usual residents; and
- The highest percentage of dwellings are total private dwellings at 89 (54.3%).

Table 3-6: Total Private Dwellings and Occupied Private Dwellings in Neskantaga First Nation (2021)

Dwelling	Count	Distribution
Total private dwellings	89	54.3%
Private dwellings occupied by usual residents	75	45.7%
Total	**164**	**100.0%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-7 below presents the total number of occupied dwellings for Neskantaga First Nation by structure type in 2021. Structure type of occupied dwellings is summarized as follows:

- The majority of dwellings are classified as single-detached at 93.3% of total dwellings;
- The remaining structural type, of apartment in a building that has fewer than five storeys, make up 6.7% of the dwellings.

Table 3-7: Total Occupied Private Dwellings by Structural Type in Neskantaga (2021)

Structural Type	Count	Distribution
Single-detached house	70	93.3%
Semi-detached house	0	0.0%
Row house	0	0.0%
Apartment or flat in duplex	0	0.0%
Apartment in a building that has fewer than five storeys	5	6.7%
Apartment in a building that has five or more storeys	0	0.0%
Other single-attached house	0	0.0%
Moveable dwelling	0	0.0%
Total	**75**	**100%**

Table 3-8 below presents the number of private dwellings by tenure (owned, rented, or government/band housing) for Neskantaga First Nation in 2021. Tenure of dwellings is summarized as follows:

- The majority of the private dwellings are considered government or band housing, accounting for 86.7% of dwellings; and
- Owner-occupied dwellings are the second highest type of dwellings present at 13.3%.

DRAFT

Table 3-8: Private Occupied Dwellings by Tenure in Neskantaga (2021)

Tenure	Count	Distribution
Owner	10	13.3%
Renter	-	0.0%
Dwelling provided by the local government, First Nation or Indian band	65	86.7%

3.2.2 Household Characteristics

The following subsections describe characteristics of households (i.e., occupied private dwellings). Table 3-9 below presents the total number of Neskantaga First Nation households by household size (i.e., the number of people per household), in 2021:

- The majority of households are occupied by one person and five or more persons at 26.7% for each category;
- Households occupied by two persons are second highest in the community, at 20%; and
- The remaining 26.6% are households occupied by three persons (13.3%) and households occupied by four persons (13.3%).

Table 3-9: Number of Households by Household Size in Neskantaga (2021)

Household Size	Count	Distribution
1 person	20	26.7%
2 persons	15	20.0%
3 persons	10	13.3%
4 persons	10	13.3%
5 persons or more	20	26.7%

DRAFT

3.2.3 Housing Conditions

The following subsections describe housing conditions which include the numbers of occupied private dwellings built during various periods of construction from 1960 up to 2021, as well as suitability and conditions of dwellings for Neskantaga First Nation.

Table 3-11 below presents the total number of occupied private dwellings by period of construction from 1960 up to 2021 in Neskantaga First Nation:

- Dwellings constructed during the period from 1991 to 2000 is the largest group with 60% of private dwellings constructed during this period;
- The fewest amount of constructed dwelling was from 1961 to 1980, 1981 to 1990, and 2001 to 2005 periods;
- There were no houses constructed in periods 1960 or before and between 2006 - 2021;
- 86.6% of the occupied private dwellings in Neskantaga First Nation were constructed during or prior to 2000; and
- Over the last two decades, 10 dwellings were constructed which comprises of 13.3% of the occupied housing stock.

Table 3-11: Occupied Private Dwellings by Period of Construction in Neskantaga (2021)

Construction Period	Count	Distribution
1960 or before	-	0.0%
1961 to 1980	10	13.3%
1981 to 1990	10	13.3%
1991 to 2000	45	60.0%
2001 to 2005	10	13.3%
2006 to 2010	-	0.0%
2011 to 2015	-	0.0%
2016 to 2021	-	0.0%
Total	**75**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 3-12 below presents the suitability of occupied private dwellings in Neskantaga First Nation in 2021. Dwellings are categorized as either “suitable” or “unsuitable”. Housing suitability assesses the required number of bedrooms for a household based on the age, sex, and relationships among household members according to the National Occupancy Standard (Statistics Canada, 2017b).

- The majority of dwellings (73.3%) in Neskantaga First Nation were categorized as suitable; and
- 26.7% of the occupied private dwellings were categorized as unsuitable.

Table 3-12: Number of Occupied Private Households by Suitability in Neskantaga (2021)

Suitability	Count	Distribution
Suitable	55	73.3%
Not suitable	20	26.7%
Total	**75**	**100%**

DRAFT

Table 3-13 below presents the conditions of the private dwellings in Neskantaga First Nation in 2021. Dwellings are categorized as either “only regular maintenance and minor repairs needed” or “major repairs needed”. Dwelling condition refers to whether the dwelling is in need of repairs. This does not include desired remodelling or additions.

The 'regular maintenance needed' category includes dwellings where only regular maintenance such as painting, or furnace cleaning is required. The 'minor repairs needed' category includes dwellings needing only minor repairs such as dwellings with missing or loose floor tiles, bricks or shingles; or defective steps, railing or siding. The 'major repairs needed' category includes dwellings needing major repairs such as dwellings with defective plumbing or electrical wiring; and dwellings needing structural repairs to walls, floors or ceilings (Statistics Canada, 2021).

- In 2021, 78.6% of the private dwellings in Neskantaga First Nation were categorized as requiring major repairs; and
- The remainder of private dwellings at 21.4% were categorized as requiring only minor repairs and regular maintenance.

Table 3-13: Occupied Private Dwellings by Dwelling Condition in Neskantaga (2021)

Dwelling Condition	Count	Distribution
Only regular maintenance and minor repairs needed	15	21.4%
Major repairs needed	55	78.6%
Total	**70**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

DRAFT

3.3 Community Services

Community services are a significant issue in remote communities because many services that are required by community members need to be accessed outside the community or are only available intermittently within the community. Historically, remote Indigenous communities have been under-serviced, which has had detrimental effects on the health and well-being of community members. Some of the most vulnerable people in the community have difficulty accessing services outside the community due to health and financial factors. The community services in Neskantaga First Nation are described in this section using the following indicators:

- Demand for community services; and
- Supply and capacity of community services.

These indicators were selected to provide an understanding of the community services that currently exist and the community services essential for the community (e.g., health care). The existing conditions of community services in the Neskantaga First Nation are described in this section.

Community Services information for Neskantaga First Nation has been collected principally from online sources, such as 211 Ontario North (211north.ca), an information portal on social, community, health and government services in Northern Ontario. The Socio-Economic Baseline also incorporates preliminary information obtained through the Socio-Economic Primary Data Collection Program, which includes Socio-Economic surveys with community members.

3.3.1 Family Services

Tikinagan is a social services organization that provides child and family services for Neskantaga First Nation. It is the largest provider of residential services in Ontario, with a service area that is approximately one-third of the province of Ontario, servicing 30 First Nations communities (Tikinagan Child & Family Services, 2023a). In January 2020,

Tikinagan was designated by the Ministry of Community and Social Services and the Band Council to provide child protection services to the families from our communities who reside in the district of Thunder Bay (Tikinagan Child & Family Services, 2023a).

Tikinagan was created to provide culturally specific child and family services, that emphasize Indigenous culture as part of its child welfare support work. This recognizes that previously support services for children and families were generally provided from outside First Nations communities, and there were harms inflicted from this approach (Tikinagan Child & Family Services, 2023b).

Services are culturally responsive and supportive of traditional values and customs. The model of “Mamow Obiki-ahwahsoowin” mandates that in all aspects of service delivery, workers are expected to consult with Elders of the community for wisdom, guidance and teachings, and to receive direction on service delivery (Tikinagan Child & Family Services, 2023c). This specifically includes the requirement to consult with First Nations leadership on case management decisions.

An overall goal of the support work by Tikinagan is to keep children at home, and in their home communities. When necessary, foster homes for children in need are located in the child’s community or a nearby community, in order to reduce the distance from home and familiarity.

The Mamow Obiki-ahwahsoowin model mandates that authority rests with the Chief and Council to declare that children be placed in Tikinagan care (Tikinagan Child & Family Services, 2023c).

3.3.2 Child Care and Youth Programs

3.3.2.1 Healthy Babies Healthy Children

The Healthy Babies Healthy Children program provides parenting support programming and promotes healthy child development. The program is available for Neskantaga children under 6 years old. The following supports are provided as part of this program (211north.ca, 2023q):

- Provides group information and educational sessions on topics about healthy pregnancy, birth and taking care of baby at home;
- Provides information on the stages of pregnancy; and
- Offers parents handbook of pregnancy and baby care (Baby’s Best Chance).

Program participants are provided with telephone follow up 48 hours after discharge from hospital, home visits pre-birth and post-birth to provide support for new mothers as well as support for early years child development, and referrals to other programs and services (211north.ca, 2023q).

3.3.3 Elder Care

3.3.3.1 Home and Community Care

Home and Community Care offers healthcare services for ill, injured, or Elder members of the Neskantaga First Nation community in the comfort of their own homes. This service is provided by a Case Manager/Nurse, Personal Support Workers, and Homemakers. The team assesses the health history of individuals and develops a personalized care plan, which is continuously monitored through case management to secure its effectiveness. The services offered include home care nursing, personal care assistance with tasks such as dressing and bathing, basic or advanced practice foot care, teaching individuals to care for themselves, home support with light housekeeping, laundry, and meal preparation, respite for family members and caregivers, and help with light outdoor/yard work (211north.ca, 2023r).

DRAFT

3.3.4 Health Services

3.3.4.1 Home and Community Care – Physiotherapy Services

The Home and Community Care program provides in-home rehabilitative care to members of Neskantaga First Nation who need assistance in preserving or regaining their independence. The physiotherapy services offered may be provided either in the client's home or at the nursing station, depending on their needs. The services provided may include physiotherapy, occupational therapy, speech-language pathology, and case management. Eligibility for these services is determined based on the individual's specific needs and requirements (211north.ca, 2023s).

3.3.4.2 Crisis Intervention

Crisis Intervention provides immediate assistance to individuals of Neskantaga First Nation affected by family violence and suicide. Their services are available on-site or through a telephone call, and if necessary, they dispatch the police. The team confirms the safety of the victims and offers support and assistance. They can also arrange meetings with family members to discuss possible crisis resolutions. Crisis Intervention also coordinates a crisis plan for suicide and domestic violence intervention and any other form of crisis situations that may arise in the community. Additionally, they conduct information sessions and workshops on techniques for healing strategies. The support services offered include debriefing and stabilization following a crisis, advocacy on behalf of individuals and families dealing with various agencies, meal preparation, transportation, homemaking, and other areas requiring support for families in crisis situations such as the suicide of a youth. Crisis Intervention provides information and referrals to appropriate resources and services (211north.ca, 2023t).

3.3.4.3 Health and Social Services

The Health and Social Services program provides a range of services that promote physical and mental health for Neskantaga community members. These services are coordinated through the nursing station and include physician consultations a few days per month with a visiting physician from Sioux Lookout. The program offers health awareness and counselling, education and prevention workshops, particularly in the areas of diabetes and alcohol/drug abuse. Clinics and workshops are also organized for diabetes initiatives, immunization, sexual health, and communicable diseases. In addition, the program offers a palliative care program when required and coordinates various health programs for community members. Individual health care needs are addressed by providing advocacy on behalf of individuals with other health professionals, coordinating one-on-one pre-natal care with the community health nurse, home visits to the sick, Elders, new mothers, and persons with health care needs, as well as assistance with coordinating local and long-distance travel arrangements for medical appointments (211north.ca, 2023u).

3.3.4.4 National Native Alcohol and Drug Abuse Program

The National Native Alcohol and Drug Abuse Program aims to provide assistance and support to individuals and families in Neskantaga First Nation struggling with addiction issues. This program offers Alcohol Anonymous (AA) and Narcotics Anonymous (NA) meetings and provides transportation to all meetings and workshops upon request. To prevent addiction, the program also holds public seminars and meetings, educational sessions in schools, and coordinates cultural and spiritual events. The intervention program facilitates recreational activities, provides individual and group discussions, and offers cultural and spiritual gatherings. Aftercare is also provided through counselling, sharing circles, and support groups, as well as regular phone calls and home visits, and referrals to other services such as detoxification and medical assistance (211north.ca, 2023v).

3.3.4.5 Aboriginal Diabetes Initiative

The Aboriginal Diabetes Initiative provides education, screening, and case management for the prevention, management, and treatment of diabetes. The program works to reduce the number of avoidable complications that can arise from uncontrolled diabetes. It advises individuals on developing and implementing an approach to care and management of diabetes, helping them find appropriate services and making referrals to other health care

DRAFT

professionals when necessary. Eligibility for this service is limited to members of the Neskantaga First Nation who are living with diabetes or at-risk of developing it (211north.ca, 2023w).

3.3.4.6 Extended Health Benefits

The Extended Health Benefits program provides a range of health benefits to individuals and families who have high health costs. Eligibility for the program is determined based on need and is open to members of Neskantaga First Nation aged 16-65 years. Benefits provided may include basic dental care, diabetic supplies, eyeglasses, hearing aids, prescription drugs, surgical supplies, and dressings, as well as transportation for medical appointments. To be eligible, individuals and families must have been eligible for Ontario Works in the previous months or received a payment for loss of income under the 1986-1990 Hepatitis C Settlement Agreement and are no longer eligible for Ontario Works (211north.ca, 2023x).

3.3.4.7 Immunization Clinic

The Immunization Clinic offers inoculations or other preventive measures to help individuals avoid specific controllable diseases. This clinic is designed to serve members of Neskantaga First Nation, ensuring that they receive the necessary vaccinations to protect against common illnesses (211north.ca, 2023y).

3.3.4.8 Medical Transportation Program

The Medical Transportation Program provides medical transportation services and assistance in making medical appointment arrangements to members of Neskantaga First Nation who require medical transportation assistance due to age or disability. The program offers transportation services within the community to medical appointments, as well as transportation assistance from/to Neskantaga First Nation to medical appointments (doctor, dentist, optometrist, specialist) in Sioux Lookout and Thunder Bay. In addition, the program provides assistance with making arrangements for any medical appointments out of town such as booking appointments, hotels, and completing applications for mileage compensation (211north.ca, 2023z).

3.3.4.9 Mental Health Program

The Mental Health Program aims to support the development of sound mental health and provide services to individuals of Neskantaga Lake First Nation experiencing mental health issues. The program provides information and awareness activities related to depression, family violence, and stress management. It also offers counselling services, cultural activities and crafts, recreational and wellness activities (211north.ca, 2023aa).

3.3.5 Cultural Services

3.3.5.1 Family Well-Being Program

The Family Well-Being Program is a Nishnawbe Aski Nation initiative that aims to support each Indigenous community in designing and delivering their own comprehensive and culturally appropriate services and programs to promote community health and family well-being. The program focuses on empowering families to build healthy relationships and improving the overall health of communities. Its activities and programs include revitalizing Indigenous languages, preventing and intervening in alcohol and drug abuse, organizing community events such as feasts, facilitating family circles, counselling and child/youth support groups, providing referrals to other programs and services, offering school programs, and conducting traditional land-based healing events. The program works towards eliminating family violence, reducing the number of youths involved in the justice system, and decreasing the number of children in care (211north.ca, 2023ab).

DRAFT

3.3.5.2 Brighter Futures

Brighter Futures is an organization that provides a variety of programs and activities to promote healthy living among members of the Neskantaga First Nation between the ages of 2 to 35 years. The organization operates a youth drop-in centre and offers educational sessions on various healthy living topics. In addition, Brighter Futures carries out fundraising efforts with children and youth to teach financial responsibility and offset program costs. With at least 3 days prior notice, the organization also provides activities and sports events upon request. Various activities are available for different age groups, including arts and crafts, ball hockey, baseball games, exercise classes, hunting and fishing, survival skills teaching, kids' playtime, movie nights, outdoor and indoor sports, traditional teachings, and weight training (211north.ca, 2023ac).

3.3.6 Recreational Services

3.3.6.1 Youth Program

The Youth Program is responsible for planning, developing, and implementing social, recreational, and special events for the children and youth of the Neskantaga First Nation community. The program provides a range of activities, such as arts and crafts, baking nights, movie nights, and outdoor sports events. During the summer months, the program organizes and supervises various outdoor activities, including baseball, football, soccer, dodgeball, and frisbee. The Youth Program works in collaboration with the Brighter Futures program to promote healthy living among community members.

Recreation services and facilities provided by the program include a baseball diamond, beach area, gymnasium, skating rink, and recreation complex. The recreation complex is used for feasts, social gatherings, indoor sports activities, and also includes office space for mineral exploration companies working with the community.

Also, a Facebook group, Neskantaga Sports & Recreation, promotes various recreational events and tournaments, including ball hockey, broomball, outdoors excursions, and bingo (211north.ca, 2023ad).

3.3.7 Communications Services

3.3.7.1 Internet Café Offered as Part of Youth Program

As part of the Youth Program, an Internet Café is available to provide a drop-in facility for youth to receive assistance with resume writing and filling out job applications. Additionally, the Internet Café offers a social centre for youth to engage in various activities and interact with each other (211north.ca, 2023ad).

3.3.7.2 KO Telehealth

The KO Telehealth partnered with member First Nations, the Ontario Telemedicine Network (OTN), the Ministry of Health and Long Term Care (MOHLTC), and First Nations & Inuit Health (FNIH) to provide high-quality and cost-effective telehealth/telemedicine service that meets the health and wellness priorities of Ontario's most isolated communities, with a focus on First Nations requirements and community leadership. The use of information and communication technology supports various health, social, and economic development needs and anticipates the development of complementary health initiatives. The telehealth/telemedicine service has significantly improved health outcomes for on-reserve populations, providing a culturally safe and competent service that bridges the gap in chronic health services access for remote First Nations communities. It has also demonstrated how health services can be delivered effectively across large and culturally diverse territories, building, and strengthening communities' capacities while supporting health workers in their roles (211north.ca, 2023ae).

DRAFT

3.3.7.3 Ontario Telemedicine Network

The OTN offers specialized medical care through videoconferencing and other tele-diagnostic equipment, enabling specialists to remotely examine and prescribe treatments to patients in their home communities. This reduces the need for patients to travel to receive care, providing greater convenience and accessibility for those living in remote or underserved areas (211north.ca, 2023u).

3.4 Education and Training Services and Facilities

Education and training services and facilities are limited in many fly-in First Nation communities. In the 2015/2016 school year, high-school completion and post-secondary participation were higher among non-Indigenous youths in Canada compared to Indigenous youths (Statistics Canada, 2023). However, when comparing First Nation youth living on-reserve to First Nation youth living off-reserve, those that live off reserves are more likely to receive a high-school diploma, which is most likely due to the lack of accessible high-schools for youth living in fly-in communities.

This section describes the existing conditions of education and training services and facilities using the following indicators:

- Demand for community education and training services;
- Supply and capacity of community education and training services; and
- Learning of traditional knowledge, which includes culture, language, and Natural Laws.

Information on Education and Training Services and Facilities of communities was collected from Statistics Canada, municipal and provincial government websites, and First Nation research studies.

Neskantaga Education Centre offers schooling for Neskantaga First Nations students from junior Kindergarten to Grade 8 (211 Ontario North – Neskantaga First Nation School, 2023). High-school is offered online, which is delivered at the elementary school.

In August 2014, the Neskantaga Training Centre was opened. This centre was provided through a partnership with Aecon and Matawa First Nations' Kiikenomaga Kikenjigewen Employment and Training Services (KKETS). The training centre provides local access to community-based education, as well as trades and apprenticeship training for Indigenous people in northern and remote areas (Aecon, 2023). The centre is a multi-purpose facility which includes e-learning tools and programs and is owned and operated by Matawa First Nations. The community employment coordinator position at Neskantaga is currently vacant (Kiikenomaga Kikenjigewen Employment & Training Services, 2023).

Neskantaga First Nation students have the opportunity to take part in Matawa's Education and Care Centre's Outdoor Education Program and Matawa Education and Care Centre's Elders Program (Matawa Education, 2019a). The outdoor education program is made up of six Land-based and Outdoor Learning credits and allows students to connect with the land and water. Activities include (but not limited to) trapping, outdoor skills, camping, canoeing, and fishing (Matawa Education, 2019a). Students travel from one Matawa First Nation to another during this program. The Elder's program supports Elder's going into the community to provide support to students with traditional activities such as: smudging, big drum making, hand drum making, drumming, feasts beading, traditional teachings, storytelling, workshops, traditional medicines, hide tanning, hunting trapping (Matawa Education, 2019b). Matawa Post-Secondary provides financial, academic and tutoring support for students to assist in meeting their educational goals (Matawa Education, 2019c).

DRAFT

3.5 Emergency and Protective Services

Many fly-in First Nation communities have limited access to Emergency and Protection Services. These services are often not available within the community which must then rely on services such as emergency medical care provided off the reserve. This section describes the existing conditions of emergency and protective services using the following indicators:

- Demand for community emergency and protective services; and
- Supply and capacity of community emergency and protective services.

These indicators were selected to determine emergency and protective services that are available within the Neskantaga First Nation, and those services that are either not available to the community or are only available outside the community. Emergency and protective services include police services, fire services, and emergency medical services (EMS). Information was primarily collected through the 211 Ontario North website and municipal/ community websites.

The Socio-Economic Baseline includes a description of the following emergency and protective services where information is available within the communities:

- Police;
- Fire; and
- Emergency Medical Services.

Police: Neskantaga is serviced by the Nishnawbe Aski Police Services (NAPS) – Central Region. Neskantaga has a NAPS detachment on-reserve (Northwest Health Line, 2023d).

Fire: Neskantanga has a volunteer fire department (Northwest Health Line, Neskantaga First Nation – Volunteer Fire Department, 2023). The volunteer fire department focuses on fire prevention and administration of the Ontario Fire Code. The volunteer fire department also issues applicable burn permits and provides education, emergency planning, fire investigation, fire suppression and home safety information (NorthWest Health Line, Neskantaga First Nation – Volunteer Fire Department, 2023).

EMS: Neskantaga currently has no EMS on-reserve. Rachael Bessie Sakanee Memorial Health Centre – Health and Social Services provides health care to Neskantaga members (NorthWest Healthline, Medical Transportation Program – Neskantaga, 2023).

3.6 Community Infrastructure

This section describes community infrastructure, including community roads, electrical power systems, drinking water management systems, wastewater management systems, solid waste management systems, telecommunications systems, and other infrastructure using the following indicators:

- Demand for community services and/or infrastructure; and
- Supply and capacity of community services and/or infrastructure.

These indicators were selected to define community infrastructure that is available in the Neskantaga First Nation, community infrastructure that is needed, and the condition of the infrastructure (i.e., if infrastructure requires upgrading and/or repair). Information was collected from various websites, including municipal/community websites, service provider websites (e.g., Hydro One), and federal and provincial sources (i.e., Government of Canada, and Government of Ontario). Table 3-14 summarizes elements of community infrastructure in Neskantaga First Nation, based on available information.

DRAFT

Table 3-14: Description of Community Infrastructure in Neskantaga (2021)

Drinking Water	Wastewater	Electricity Supply	Solid Waste Management
▪ Level 1 Water treatment facility. New plant was commissioned in Dec 2020. ▪ Water Quality: Unknown. ▪ Boil water advisory in place since Feb 1995.	▪ Level 1 Wastewater treatment plant. ▪ Constructed in 2003. ▪ Facultative Lagoon. ▪ Effluent Quality: meets federal guidelines.	Diesel generation plant. Served by Hydro One Remotes.	Nearby landfill site.

Sources: Water and Wastewater Information, 2011; Drinking Water Advisories, 2021; Government of Canada, 2019; Hydro One, 2021; Hydro One 2018; Five Nations Energy Ince., 2021; Wataynikaneyap Power, 2021; Government of Ontario, 2021; 211 Ontario North, 2023, Infrastructure Canada, 2010.

In 2023, the community of Neskantaga First Nation marked the 28th year of being under a Boil Water Advisory (BWA) (Matawa, 2023). This represents a water crisis for the community, causing and exacerbating physical and mental health issues and interrupting many aspects community well-being. The community leadership has continued to plead with governments to fix the problem, and that the issue must be addressed prior to advancing other economic development priorities of industry.

3.7 Transportation

Transportation and access to goods and services outside of communities is a key consideration for communities in Ontario's Far North. The only paved road in the Far North is Highway 599 (IBI Group & Hemson Consulting Ltd, 2016). For communities without all-season road access, remote airports running year-round connect communities to regional hubs to the south and other communities for services, and for the delivery of goods.

In addition, during the coldest weeks of winter with deep freeze conditions, communities use winter roads to connect them to all-season road networks and rail connections. The winter road season tends to be from mid-January to Spring thaw (Ontario Ministry of Northern Development, 2023). Hauling heavy bulk supplies is more cost-effective and critical for the communities to maintain supplies of fuel, water, housing materials, food and other goods (IBI Group & Hemson Consulting Ltd, 2016). Living in First Nation communities with no all-season roads has many implications including limited access and the high cost associated with travelling and shipping. The shortening of winter road seasons has been a matter of concern for Indigenous communities in Northern Ontario in recent years. More snow than usual and warm spells in the winter months disrupt transportation of goods and services over winter roads. Higher average temperatures expected to be the result of climate change have been observed to impact the viability of winter roads and have shortened the winter road season (CBC, 2023a, 2023b). With climate change, the duration of safe lake ice is also projected to decrease. A study has shown that a 1.5ºC (degree Celsius) increase in average temperatures due to climate change can lead to 90% of current ice roads no longer being sustainable (Woolway et al, 2022).

For generations, Indigenous communities have relied on waterways in various ways including for travel to support community life. Waterways are recognized to be vital to the sustainability of communities.

This section describes the transportation options available using the following indicators:

- Road transportation;
- Air transportation; and
- Waterways.

DRAFT

Neskantaga First Nation uses NORT/Highway 808 which is an all-season road that runs north from Pickle Lake and interconnects with the Webequie Winter Road Corridor. The Webequie Winter Road Corridor is one of three winter road systems connecting communities from the NORT. The Webequie Winter Road Corridor connects four First Nation communities (Webequie First Nation, Nibinamik First Nation, Neskantaga First Nation and Neskantaga First Nation) (IBI Group & Hemson Consulting Ltd, 2016).

Neskantaga First Nation has flight access via Wasaya Airways which provides scheduled air services to 15 Indigenous communities, providing connections to Sioux Lookout, Red Lake, Pickle Lake and Thunder Bay (Wasaya Airways Limited Partnership, 2023), and North Star Air which provides charter services between Neskantaga First Nation and centres to the south, including Sioux Lookout, Pickle Lake and Thunder Bay (North Star Air, 2023).

3.7.1 Winter Road Traffic Volumes in the Local Study Area

Information is not currently available/section not complete.

3.7.2 Waterways in Neskantaga First Nation Traditional Territory

Neskantaga First Nation traditional territories are within or near the secondary watersheds of Attawapiskat River-Coast, Upper Albany River, Ekwan River-Coast and Winisk River-Coast secondary watersheds (Government of Ontario, 2023).

The Neskantaga First Nation rely on parts of some of these watersheds as a source of traditional ceremony, fishing, hunting, trapping, and medicinal plant gathering (Palframan, 2021).

3.8 Community Well-Being and Safety

3.8.1 Community Well-Being

Community well-being and safety are critical factors in identifying the condition of First Nation communities. Despite improvements in community well-being to First Nation communities over the last 35 years, the Socio-Economic gap between First Nation communities and non-Indigenous communities remains (Statistics Canada, 2019b). Safety is a principal concern among First Nation communities due to historical and intergenerational trauma persisting throughout Canada, and many First Nation members experience racism as a result (Perrault, 2022). The Socio-Economic Baseline provides information that will enable the assessment of effects on community well-being and safety.

This section describes the existing conditions of community well-being and safety using the following indicators:

- Social cohesion and culture;
- Participation in social and/or cultural events;
- Safety; and
- Nuisance.

One comparative measure of community well-being is the Community Well-Being (CWB) Index. The CWB uses four key Socio-Economic factors (education, income, labour and housing) to measure the well-being of communities across Canada and throughout time. For each community, a score is calculated for each of the four Socio-Economic factors, as well as an overall well-being score based on a combination of all these factors, which is used to compare well-being among Indigenous communities, and between Indigenous communities and non-Indigenous communities. The data presented in this section are provided by the 2016 Census of Population data (most recent dataset) (Statistics Canada, 2017a). It is important to note that “well-being” means different things to different people and the scores from the CWB are only one aspect in determining the well-being of a community. The four factors used to score the CWB are used as they are important topics that are part of people’s overall “well-being.”

DRAFT

The four Socio-Economic factors used in the scoring of the CWB:

- Education - based on how many community members have at least a high-school education and how many have acquired a university degree;
- Labour Force Activity - measures how many community members participate in the labour force and how many labour force participants have jobs;
- Income - calculated based on a community's total income per capita; and
- Housing - based on the number of community members whose homes are in an adequate state of repair and are not overcrowded.

Table 3-15: CWB Index Scores for Neskantaga First Nation

Community	Overall	Education	Labour	Income	Housing
First Nations in Canada	**58**	**40**	**69**	**54**	**71**
First Nations in Ontario	**59**	**38**	**72**	**53**	**70**
Neskantaga First Nation	49	N/A	N/A	N/A	N/A

Source: Indigenous Services Canada, 2019b.

Neskantaga First Nation CWB scores are available only for the overall score (49), which is lower than the average for First Nations in Canada (58) and First Nations in Ontario (59).

3.8.2 Safety

According to the Canadian Centre for Justice and Community Safety Statistics, there were 182 police services or detachments in Canada responsible for serving Indigenous communities (i.e., communities where more than half of the residents are Indigenous) (Allen, 2020). These 182 police services had some of the highest crime rates among 1,200 police detachments in Canada, with Indigenous communities having six times higher crime rates than non-Indigenous populations. Ontario had one of the lowest crime rates reported in Indigenous communities (along with British Columbia).

Table 3-16 provides a generalized summary of the regional crime rates based on available information and as reported by the noted police services in the Regional Study Area. The data are reported as rates of 100,000 people. Some First Nations communities are serviced by the Ontario Provincial Police (OPP). The OPP is a division of the Ministry of Solicitor General and is the largest police service in Ontario, and second largest police service in Canada (OPP, 2023). Part of the OPP's responsibilities for Indigenous communities is to provide administrative support for First Nation Policing programs. The NAPS reported the highest rates of crime across categories. NAPS area provides police patrols within Northern Ontario and serve 34 First Nation communities (Ketonen, 2023). NAPS often do not have the same resources that other police forces have with limited staff, budget and resources (Thompson, 2017). In 2017, Public Safety Canada outlined that crime rates in First Nations communities were four times higher than the average municipal rate (Thompson, 2017).

Table 3-16: Crime Statistics in Indigenous Communities and Municipalities for 2021, as Reported by the Police Service Responsible for that Area

Municipalities	Total Crime, Rate, 2021*	Total Violent Crime, Rate, 2021*	Total Sexual Assault, Rate, 2021*	Total Drug Ciolations, Rate, 2021*
Nishnawbe Aski Nation, municipal	26,412	9,421	553	649
Anishinabek, municipal	14,567	4,646	193	435
Kenora District, OPP, municipal	12,018	2,838	264	301
Thunder Bay District, OPP, rural	4,358	1,395	155	224

Source: Statistics Canada, 2022b.

Note: *Data are reported as rates of 100,000 people.

ECONOMIC ENVIRONMENT

DRAFT

AtkinsRéalis - Confidential

4. Economic Environment

4.1 Labour Force and Employment

First Nations people are under-represented in Canada's labour market (Anderson, 2019). This section describes the existing conditions of labour force and employment using the following indicators:

- Labour force characteristics, including employment, age, population, labour force participation, unemployment, barriers to employment, time spent on unpaid domestic work;
- Education and training attainment, including highest certificate, diploma, or degree, field of study, occupations, training opportunities; and
- Labour income, including income, sources of income.

Tradition is an important cultural piece in Indigenous communities who are very connected to the lands on which they live. This means there are specific guidelines for where economic activity can occur and how lands are used.

The traditional economy is another important cultural aspect within the communities. Unfortunately, traditional economy activities are not widely reported on and therefore it is difficult to quantify the economic impact they have within the communities.

4.1.1 Labour Force Characteristics

Table 4-1 present the forecasted working age population in Neskantaga First Nation over the projection period: 2016, 2021, 2028, 2033, and 2043. The values for 2016 and 2021 are published statistics from the 2016 and 2021 Statistics Canada Census of Population (Statistics Canada, 2017, 2022a). The values for 2028, 2023, and 2043 were forecasted based on the 2016 and 2021 data. The working age population is defined as those aged 15 to 64. Projected trends of working age population in Neskantaga First Nation are summarized as follows:

- The total working age population is increasing over the projection period;
- The male working age population distribution decreases over the project period from 57.1% to 47.3%;
- The female working age population distribution decreases from 46.4% to 38.4%; and
- Based on current growth trends, the total working age population is forecasted to increase, a growth of approximately 21%.

Table 4-1: Projected Working Age Population in Neskantaga First Nation (2016, 2021, 2028, 2033, 2043)

Year	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
2016	140	100%	80	57.1%	65	46.4%
2021	145	100%	80	55.2%	65	44.8%
2028	152	100%	80	52.5%	65	42.7%
2033	158	100%	80	50.7%	65	41.2%
2043	169	100%	80	47.3%	65	38.4%

Source: Statistics Canada, 2017; 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

DRAFT

Table 4-2 present the breakdown of the population in the labour force and those not in the labour force for Neskantaga First Nation in 2021.

- The majority of the population is in the labour force at 56.3%. Male individuals (50) among the labour force population are higher than the female individuals (40);
- The participation rate for the total non-working age population is 43.8%;
- The participation rate for males in the labour force is 55.6%; and
- The participation rate for females in the labour force is 57.1%.

Table 4-2: Labour Force Participation in in Neskantaga First Nation (2021)

Labour Force Participation	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
In the labour force	90	56.3%	50	55.6%	40	57.1%
Not in the labour force	70	43.8%	40	44.4%	30	42.9%
Total	**160**	**100%**	**90**	**100%**	**70**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 4-3 presents the breakdown of the employment status for those classified as being in the labour force for Neskantaga First Nation in 2021:

- Of the population classified as being in the labour force, 88.9% are employed making the unemployment rate 11.1%; and
- There are no unemployed females accounted for in Neskantaga First Nation.

Table 4-3: Employment Status of Labour Force in Neskantaga First Nation (2021)

Labour Force Status	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
Employed	80	88.9%	45	81.8%	35	100.0%
Unemployed	10	11.1%	10	18.2%	-	0.0%
Total	**90**	**100%**	**55**	**100%**	**35**	**100%**

Source: Statistics Canada, 2022a.

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

DRAFT

4.1.2 Education and Training Attainment

There is high value placed on principles and teachings passed down by Elders and Knowledge Keepers. These teachings take place in the community and out on the Land. The knowledge passed on from the ancestors sustains the Neskantaga Oji-Cree identity and way of life.

Table 4-4 presents the highest level of western educational attainment for the population aged 15 years and over in private households in Neskantaga First Nation for 2021.

- The majority of the population aged 15 and over has no certificate, diploma, or degree at 61.3%;
- 40 residents in the community have obtained a post-secondary certificate, diploma, or degree which accounts for 25.8% of the population aged 15 and over. The male population has a slightly higher rate of post-secondary qualification attainment at 27.8%, compared to 21.4% of the female population; and
- The second highest distribution of population are those is with a secondary school diploma or equivalent qualification at 12.9%, 10 of which are male (11.1%) and 10 are female (14.3%).

Table 4-4: Highest Certificate, Diploma or Degree for the Population Aged 15 Years and Over in Private Households in Neskantaga First Nation (2021)

Highest Level of Education	Total		Male		Female	
	Count	Distribution	Count	Distribution	Count	Distribution
No certificate, diploma or degree	95	61.3%	55	61.1%	45	64.3%
High (secondary) school diploma or equivalency certificate	20	12.9%	10	11.1%	10	14.3%
Post-secondary certificate, diploma or degree	40	25.8%	25	27.8%	15	21.4%
Total	**155**	**100%**	**90**	**100%**	**70**	**100%**

Note: All counts in census tabulations undergo random rounding, a process that transforms all raw counts into randomly rounded counts. This reduces the possibility of identifying individuals in the tabulations. This results in breakdown values not always adding up to the total count.

Table 4-5 present the major fields of study for Neskantaga First Nation's population aged 15 and over who had obtained a post-secondary education as of 2021.

- The most popular field of study pursued in Neskantaga First Nation is architecture, engineering, and related trades with 15 graduates. This accounts for 42.9% of total certificates, degrees, or diplomas obtained, of which approximately 60% were male;
- The only field of study pursued by females was education with 10 completed certificates, diplomas, and degrees which accounts for 100% of female graduates; and
- The fields of study pursued by males were architecture, engineering, and related trades (15 graduates) and personal, protective and transportation services (10 graduates) with all of male graduates pursuing these two fields.

Table 4-5: Major Field of Study for the Population Aged 15 Years and Over in Private Households in Neskantaga First Nation (2021)

4.1.3 Labour Income

Information not available.

DRAFT

4.2 Overall Economy

4.2.1 Cost of Living

Fly-in communities such as Neskantaga First Nation generally experience higher cost of living due in part to connectivity with wider markets. There are projects and initiatives in the community that support economic development, although historically one factor that has challenged economic development is the road connectivity. Existing conditions of the overall economy in Neskantaga First Nation are described in this section using the following indicators:

- Cost of living;
- Economic development, including economic development initiatives, capacity, gaps, major projects, new projects, closures, equipment availability, energy profile, access to capital and trends;
- Traditional economy; and
- Data on Gross Domestic Product (GDP) for the Neskantaga First Nation is unavailable.

Due to the remoteness of Neskantaga First Nation and supply chain challenges (i.e., transporting goods into the community), the cost of living can be substantially higher in comparison to urban areas. In general, the community is far from urban centres, which creates transportation challenges for both goods and services coming into the community as well as residents leaving the community for goods and services.

Practicing traditional culture is an important element of life in Indigenous communities, with members being very connected to the lands on which they live.

The traditional economy is another important cultural aspect within the community. Unfortunately, traditional economy activities are not widely reported on and therefore it is difficult to quantify the economic impact they have within the community.

A significant portion of the economic development activities occurring are focused on business development, access to services, advisory services, and employment counselling.

In the Nishnawbe Aski Nation 2020-2021 Annual Report it is stated that many families in remote, semi-remote and isolated First Nations face acute hardship due to the extremely high cost of living, including: food, housing, fuel, and basic expenses (Nishnawbe Aski Nation, 2022). Nishnawbe Aski Nation community members often need to travel to larger urban centres to access medical and mental health care services and other specialist services and may end up having to stay in urban centres longer than planned (Nishnawbe Aski Nation, 2022).

Information on cost of living for Neskantaga First Nation is not available.

4.2.2 Economic Development

4.2.2.1 Nishnawbe Aski Nation

The Nishnawbe Aski Nation is the governing body of all Indigenous communities with the exception of Fort Albany First Nation, Kashechewan First Nation and Kitchenuhmaykoosib Inninuwug First Nation. Resource development (i.e., mining and forestry), small business, and employment and training are all files that fall under the Economic Development portfolio at Nishnawbe Aski Nation.

DRAFT

Due to the COVID-19 pandemic, the primary focus of the Nishnawbe Aski Nation during the 2020-2021 fiscal year was to verify that public health was at the forefront of any work or advances undertaken at the community level. The Economic Development portfolio also included food security/food self-determination. As the COVID 19 pandemic progressed, monitoring food security throughout Nishnawbe Aski Nation territory became critical, as did intervening and assisting communities directly when issues arose.

Resources and services offered by Nishnawbe Aski Nation include the Nishnawbe Aski Development Fund which operates as a Client Services office which provides business and economic development services to First Nations communities and majority-owned Aboriginal businesses in Northern Ontario. The following services are offered (211 Ontario, 2021a):

- Appraisal Services;
- Bookkeeping Training;
- Business Support Services;
- Community Planning;
- Due Diligence Services;
- Financing (Loans and Grants); and
- Workshops.

4.2.2.2 Matawa First Nations Management

The Matawa First Nations Management offers economic development services to member First Nations within Matawa Territory. Included within the Matawa Territory is Eabametoong First Nation, Marten Falls First Nation, Neskantaga First Nation, Nibinamik First Nation, and Webequie First Nation.

The services provided include (211 Ontario North, 2023a):

- Technical and professional advisory services and training to enhance the overall economic opportunities and management skills of the Matawa Area First Nations;
- Promoting and supporting sustainable development that will build each community's economic strength;
- Assisting in identifying and securing funding opportunities and other resources for community economic development;
- Advising and assisting in the creation of employment opportunities for community members;
- Working to develop factors such as diversified employment, skilled workforce, competitiveness, investment and industry; and
- Working to improve the relationship between Indigenous and non-Indigenous businesspeople.

4.2.2.3 Neskantaga First Nation

Economic initiatives that Neskantaga First Nation is involved with include (211 Ontario North, 2023c):

- A signed business partnership (2014) with North Star Air Ltd along with its affiliate Cargo North;
- Partnership with Webequie, Eabametoong, and Nibinamik First Nations to complete a regional community service corridor study to examine the benefits of developing an all-season transportation corridor connecting Indigenous communities in the area with existing roadways, enabling them to capitalize on opportunities related to resource development in the region, including the Ring of Fire;
- Opening of the Neskantaga Training Centre (August 2014), a new innovative facility and collaboration technology centre which delivers training directly to the community; and
- Member of Rapid Lynx Corporation, owned and operated by the 6 Matawa First Nation communities, formed to improve internet services within each community.

DRAFT

4.2.3 Traditional Economy

A traditional economy is a system that relies on customs, history, and time-honoured believes. Tradition guides economic decisions such as production and distribution. Communities with traditional economies depend on agriculture, fishing, hunting, gathering, or some combination of them (Amadeo, 2022). This section outlines the traditional economy within Neskantaga First Nation to identify community concerns with the Project, specifically how they view the Project will affect the traditional economy.

The traditional economy is an important cultural aspect within the community. Unfortunately, traditional economy activities are not widely reported on and therefore it is difficult to quantify the economic impact they have within.

Traditional economic activity is typically not captured by commonly used data sources, so it is difficult to provide a complete picture of the traditional economy labour market in Neskantaga First Nation.

Note: The Project Team is working with communities that are providing information, including the traditional economy of their community. This information will be incorporated as it becomes available.

4.3 Business Environment

4.3.1 Local Economy

A high-level description of the local economy of other Local Study Area (LSA) Indigenous communities is presented below, based on data available that describes occupations and industry spending using an industry database for statistical information, Lightcast.[1]

The industries with the largest job presence within the other LSA Indigenous communities in 2022 include - public administration, health care and social assistance and educational services The industries with the highest growth in jobs between 2018 and 2022 include retail trade (32%), public administration (28%), and health care and social assistance (25%).

Out of approximately $101 million in spending across all industries in the other LSA Indigenous communities in 2020, the percentage of in-region purchases across all industries is low. This amounted to under $4 million of purchases which represents 3.9% of total purchases in 2020. The majority of demand for goods and services within the LSA Indigenous communities is met by imports (92.3%).

4.3.2 Mining, Aggregate and Forestry Activities

Neskantaga First Nation has currently taken legal action against the Ontario government as they have outlined that Ontario has failed to fulfil its duty to consult and accommodate the consultation period for approval of the ToR for the Marten Falls Community Access Road (Raventrust, 2021). Neskantaga has outlined that “based on the current plans for the construction of roads, mines and other types of infrastructure in the region, Neskantaga will suffer irreversibly negative effects to its Aboriginal and Treaty Rights and titles. These impacts will affect the people, land, territory and resources of Neskantaga” (Neskantaga Notice of Application, 2021).

Neskantanga First Nation is one of 10 northern First Nations who launched a lawsuit against the Ontario and federal government in April 2023 (McIntosh, 2023). They have requested that the Canadian government be barred from making any decisions about how land could be used in the Ring of Fire for mining and other purposes without Indigenous consent. The lawsuit centres on Treaty No. 9 and the contrast between the verbal and written promises of Treaty No. 9 as recorded (McIntosh, 2023).

[1] Lightcast products provide detailed information about occupations, skills in demand, and career pathways, providing labor market insight to employers, educational institutions, and government agencies.

DRAFT

TRADITIONAL INDIGENOUS LAND AND RESOURCE USE

DRAFT

AtkinsRéalis - Confidential

5. Traditional Indigenous Land and Resource Use

5.1 Sites and Areas Used for Traditional Activities

Indigenous communities customarily use the lands and the resources of their traditional territories for various purposes related to achieving Mino Bimaadziwin (The Good Life). Mino Bimaadziwin is a cultural value that includes spiritual, physical, mental and emotional well-being which may be tied to a reciprocal relationship with Aki (the Land).

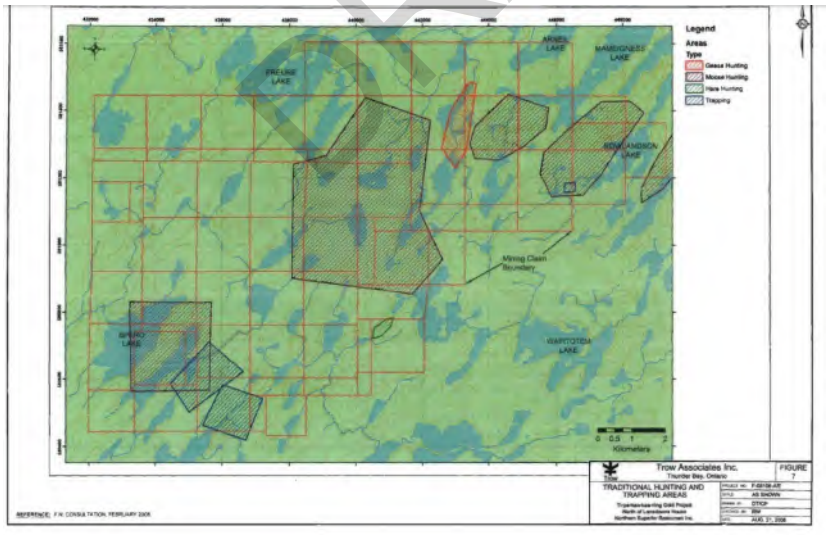
The Anishinaabe way of life includes fishing, trapping, hunting, harvesting and stewardship of Aki while keeping in mind the respectful value of sustainability. The types of practices are well known generally; however, specific sites and areas of use require in-depth information from communities participating in the information gathering.

The Attawapiskat and Otoskwin Rivers surrounding the Neskantaga First Nation were once part of a major trade route. Many Neskantaga community members participate in traditional harvesting of wildlife and fish, plants, bark, trees and berries in the surrounding areas (Neskantaga, 2023).

Neskantanga First Nation Elders have identified an area south of Mameigwess Lake on a ridge between two unnamed water bodies, as a winter and a summer travel route that extends the length of these two unnamed water bodies (White Spruce, 2008). Copper Point, located on the west side of Rowlandson Lake, on a large peninsula, was historically used for camps and historical mining activity (White Spruce, 2008). Hunting for moose, waterfowl and snowshoe hare, and fishing activities occur within areas identified by the Neskantanga Elders in a 2008 consultation for a proposed diamond drilling exploration program as shown on Figure 5-1 (Trow Associates Inc., 2008). This 2008 consultation focused on specific areas where the diamond drilling was proposed and is located 30 km northeast of Neskantaga.

DRAFT

Figure 5-1: An Example of Traditional Hunting and Trapping Areas of Neskantaga First Nation



Source: Trow Associates Inc., 2008.

According to the Webequie First Nation Community-Based Land Use Plans (CBLUP), Neskantaga First Nation and Webequie First Nation share a common history of movement and Webequie First Nation, Marten Falls First Nation and Neskantaga First Nation have overlapping land claims. Webequie First Nation has ongoing consultation with Neskantaga and Marten Falls regarding the southern portion of the planning area identified within the Webequie First Nation CBLUP. Neskantaga First Nation has indicated direct impacts to their traditional territories by the WSR project (location unknown) (Archaeological Services Inc., 2021).

5.2 Culturally and Spiritually Important Sites and Areas

Many Indigenous communities have identified culturally and spiritually important sites and areas in their CBLUPs, which outline the locations and history of these areas, and the cultural and spiritual importance to their community. Although some of these areas may not currently be used for traditional practices, the sites may still hold cultural and historic importance.

Locations along the Attawapiskat River have cultural importance to the Neskantaga First Nation. A river crossing which Canada Chrome Corporation identified as a location for a potential bridge, was identified as a crucial gathering place and site of an old village and is of high archaeological potential according to the Neskantaga people (Bell, 2015). The site is located along a long stretch of rapids on the Attawapiskat River, on a natural ridge of bedrock. The specific location of this crossing has not been identified.

A historically occupied hamlet site, Shay-kaah-chii-wii-nange, located along the Attawapiskat River about halfway between Pym Island and the historic Beteau Lake settlement has been identified to be in close proximity to the Ring of Fire mineral development area (Hamilton, 2015).

DRAFT

NON-TRADITIONAL LAND AND RESOURCE USE

DRAFT

AtkinsRéalis - Confidential

6. Non-Traditional Land and Resource Use

This section summarizes a baseline of Non-Traditional Land and Resource Use. This includes land use plans and policies, community-based land use planning, industrial and commercial land use, outdoor recreation and tourism, and provincial parks and protected areas. Non-Traditional land use also includes the designating of lands through federal, provincial or municipal authorities for a specific use. Baseline information was developed through a desktop review of existing information, federal and provincial mapping databases, federal and provincial policy and regulation review and secondary data. Secondary data included a review of recreation and tourism websites, municipalities websites and news articles.

6.1 Indigenous Homelands

It is acknowledged that the project study areas are situated within the traditional lands of the Anishiniimowin/ Anishinabe/Mushkeego Peoples. “The Anishiniimowin/Anishinabe/Mushkeego Peoples have called the lands of the James Bay Treaty home since time immemorial. The Mushkeego live mainly in the James Bay and Hudson Bay lowlands, while the Anishiniimowin and Anishinabe traditionally live mainly in the interior, closer to the height of land that divides the James Bay and Hudson Bay watershed with those to the south.” (Ministry of Public and Business Service Delivery, 2022). The Anishiniimowin/Anishinabe/Mushkeego Peoples are stewards of the land and hold the inherent right of self-determination that is recognized and affirmed under Section 35 of the *Constitution Act*, 1982. Canada has recently developed an Action Plan to implement the United Nations Declaration on the Rights of Indigenous Peoples (The United Nations, 2007). The five-year Action Plan (2023-2028) outlines and affirms as well as respects the inherent rights of Indigenous Peoples as they relate to lands, territories and resources, and autonomy.

6.2 Treaty Lands

Treaties are agreements made between the Government of Canada, Indigenous Nations and often provinces and territories that define ongoing rights and obligations on all sides. These agreements set out continuing Treaty Rights and benefits for each Indigenous Nation (CIRNAC, 2023).

Treaties with Indigenous Nations in Ontario include both:

- Historic (numbered) treaties with Indigenous Nations; and
- Modern treaties, also called comprehensive land claim agreements with Indigenous Nations; and
- Specific claim agreements to address past grievances.

The Project is within land covered by Treaty No. 9 (CIRNAC, 2013). The Treaty No. 9 area covers approximately two-thirds of Ontario’s total landmass and includes:

> *“that portion or tract of land lying and being in the province of Ontario bounded on the south by the height of land and the northern boundary of the territory ceded by the Robinson Superior Treaty of 1850, and the Robinson Huron Treaty of 1850, and bounded on the east and north by the boundaries of the said province of Ontario as defined by law and on the west by a part of the eastern boundary of the territory ceded by the Northwest Angle Treaty No. 3.” (Crown-Indigenous Relations and Northern Affairs, 2013)*

Treaty No. 9 was signed between the Anishiniimowin/Anishinabe/Mushkeego Peoples and the Crown in 1905-1906, with adhesions in 1929-1930. The Treaty contains a number of provisions including cash payments, the creation of reserves, education funds for schools and teachers, etc. With the signing of the Treaty, the Crown sought to extinguish First Nations title to the land. Treaty No. 9 also outlines traditional pursuits such as hunting, fishing and trapping that could continue, subject to federal regulations and “exceptions for settlement, mining, lumbering, trading or other purposes.” (Ministry of Public and Business Service Delivery, 2023).

DRAFT

6.3 Reserves

The *Indian Act*, R.S.C., 1985, c.I-5, states that land on reserves is owned by the Crown (Government of Canada) but it is given to the First Nation or the Band to hold and use as a tenant. This legal structure (to be a tenant on land owned by the Crown) is shared between community members collectively which provides a beneficial interest in the land. Under the *Indian Act*, a reserve means a tract of land of which the legal title is vested with His Majesty (Government of Canada) that has been set apart by His Majesty for the use or benefit of the Band. Section 81(1) sets out the by-laws which govern the authority of the Band Council and includes by-laws related to land use, zoning, the environment, and other works. These by-laws only apply on-reserve. On many reserves, if land is legally given to a Band member, a certificate of possession or certificate of occupation is granted. The certificate grants the individual(s) rights of possession or occupation of the property for housing, business, or resource extraction. Under the *Indian Act*, this requires the approval of the Minister of Indigenous Services.

6.4 Crown Land

The Project is proposed to be located primarily on provincial Crown land and will require access to, and the development, use and occupation of lands and resources which are currently used for traditional activities by Indigenous communities. Crown land is used to describe land owned by federal or provincial governments under the Public Lands Act.

Traditional activities of Indigenous communities include hunting, fishing, trapping, and gathering, as well as cultural and spiritual activities, which may occur on Crown land.

Given the location of the Project, land designated under the *Far North Act*, *2010* may be subject to CBLUPs that are applicable and are initiated by Indigenous communities.

6.5 Road/Transportation Studies

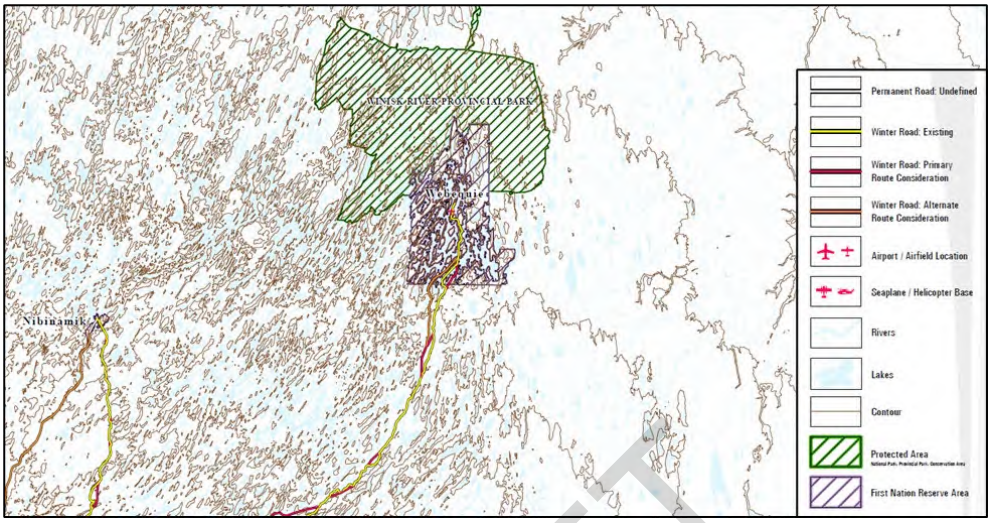
No Road/Transportation Studies were available for review for Neskantaga First Nation. Communities in the LSA do not currently have all-season road access to the provincial highway system to the south and are currently fly-in or winter road access and the existing local road network is limited. The communities in the LSA use remote airports and winter roads for travel and shipping. Limited information is available on winter roads daily traffic counts within the LSA. Living in a community with no all-season roads limits access to people living in these communities and the high cost associated with travelling and shipping goods, and high cost of living.

6.5.1 Winter Road Re-Alignment Study (2008)

On behalf of five First Nations (Marten Falls, Eabametoong, Neskantaga, and Webequie), the Matawa First Nations Tribal Council conducted a study in 2008 to examine the re-alignment of selected sections of winter roads (Neegan Burside, 2008) as shown in Figure 6-1. The study included extensive consultation with the First Nations, regulatory agencies and stakeholders (e.g., forestry companies and outfitters). It identified several alternative re-alignments and design alterations (e.g., improvement to road design and construction standards) to address deficiencies in the winter road system.

DRAFT

Figure 6-1: Matawa Winter Road Re-Alignment Study



Source: Neegan Burnside Ltd., 2008

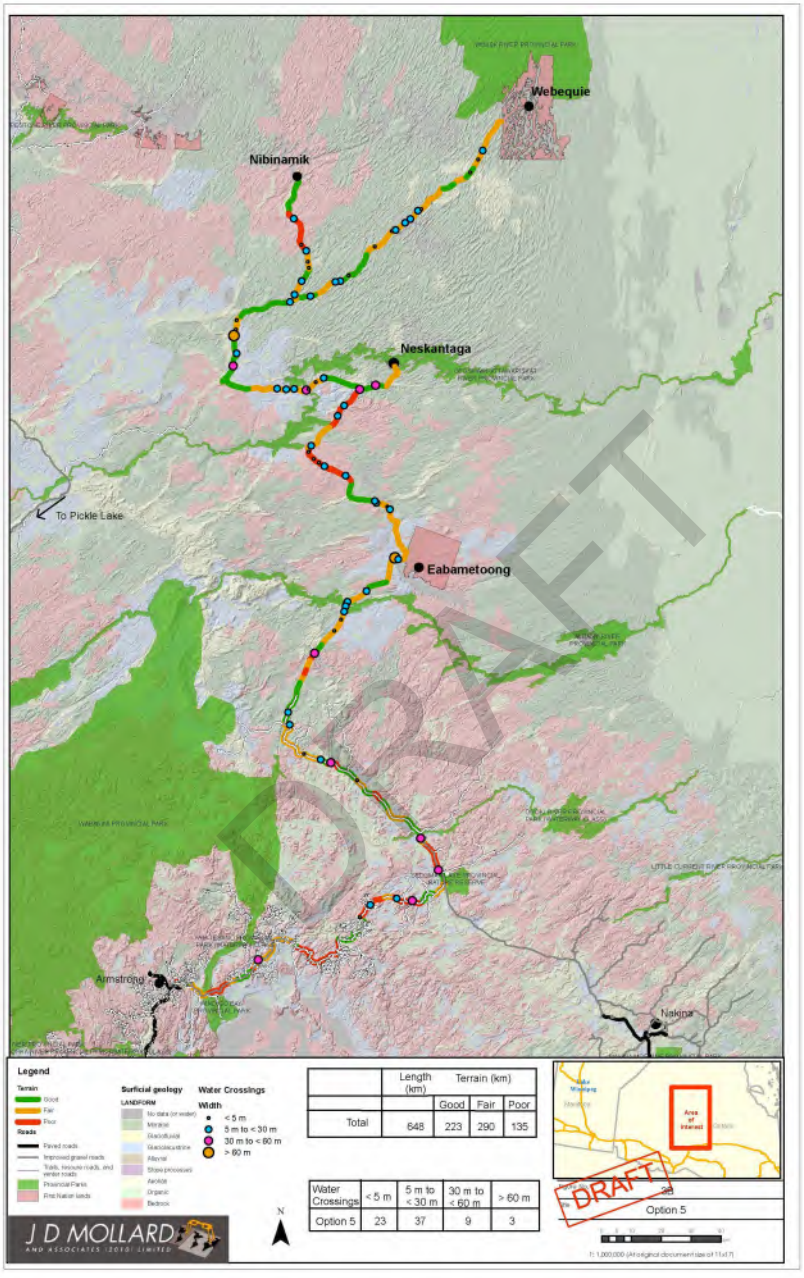
6.5.2 All-Season Community Road Study (2016)

Webequie First Nation, in partnership with three other First Nations (Neskantaga, Nibinamik and Eabametoong), completed the All-Season Community Road Study (ASCRS) in June 2016 (Webequie Supply Road, 2020). The purpose of this study was to examine options for interconnecting these Indigenous communities to the provincial highway system, with the goal of providing community social and economic benefits. Many alternatives were examined, including those previously preferred by Noront Resources, Cliffs and KWG Resources (Webequie Supply Road, 2020).

From the community engagement and assessment completed, a preferred corridor was identified with a general east-west orientation that connected the four communities to the provincial highway system at Pickle Lake as shown on Figure 6-2. The preferred corridor/road from the 2016 ASCRS did not connect to the McFaulds Lake area due to unresolved issues and concerns expressed by some participating First Nations about mining development in the Ring of Fire area (Webequie Supply Road, 2020).

DRAFT

Figure 6-2: Matawa Winter Road Re-Alignment Study



Source: All Season Community Road Study, 2016.

6.6 Provincial Plans and Polices

6.6.1 Far North Act, 2010

The *Far North Act, 2010* as amended in December 2021 sets out a joint planning process between First Nations communities and the province of Ontario. The *Far North Act* facilitates land use planning decisions in the Far North by governing how the Province will work with Indigenous communities to identify areas where development can occur, and areas that should be protected.

Section 1 of the *Far North Act* outlines:

The purpose of this Act is to provide for community-based land use planning in the Far North that:

a. Sets out a joint planning process between the First Nations and Ontario[2];

b. Supports the environmental, social and economic objectives for land use planning for the peoples of Ontario that are set out in Section 5; and

c. Is done in a manner that is consistent with the recognition and affirmation of existing Aboriginal and Treaty Rights in Section 35 of the *Constitution Act, 1982*, including the duty to consult. 2010, c. 18, s. 1.

The Far North is defined in the Act as:

a. The portion of Ontario that lies north of the land consisting of:

   i. Woodland Caribou Provincial Park;

   ii. The following management units designated under Section 7 of the *Crown Forest Sustainability Act, 1994* as of May 1, 2009: Red Lake Forest, Trout Lake Forest, Lac Seul Forest and Caribou Forest,

   iii. Wabakimi Provincial Park; and

   iv. The following management units designated under Section 7 of the *Crown Forest Sustainability Act*, 1994 as of May 1, 2009: Ogoki Forest, Kenogami Forest, Hearst Forest, Gordon Cosens Forest and Cochrane-Moose River; or

b. The area, if any, that is set out in the regulations made under this Act and that describes the area described in clause (a) more specifically; (“Grand Nord”).

The *Far North Act, 2010* legislation was put in place to support the protection of environmental, cultural, and economic values for land use planning and to confirm that community-based land use planning is done in a manner consistent with recognition and affirmation of existing Aboriginal and Treaty Rights in Section 35 of the *Constitution Act, 1982*. Ontario’s *Far North Act, 2010* was represented as a significant piece of legislation for Indigenous communities in the North, fortifying the importance of community-based land use planning and the exercise of Indigenous rights of stewardship and jurisdiction over specific territories in Ontario. The Province must approve CBLUPs.

[2] Community-based land use plans require provincial approval.

DRAFT

Under the *Far North Act, 2010*, the CBLUP process was developed by the province as a vehicle to explore with Indigenous communities and groups, among other land uses, the potential for permissible use of lands for forestry in First Nation's areas of interest. ToRs for CBLUP Terms of Reference have noted in the objectives that plans would include consideration of the following (Eabametoong and Mishkeegogamang First Nations, 2013):

- Traditional and Customary Use;
- Conservation and Protection;
- Forest Management (commercial forestry);
- Forest Management (non-timber forest products);
- Tourism (and Eco-Tourism);
- Geoscience and the Mineral Sector (exploration and mining);
- Recreation;
- Water Conservation and Protection;
- Renewable Energy;
- Access and Infrastructure;
- Climate Change; and
- Fire Management.

6.6.2 Northern Ontario Transportation Plan

The draft Northern Ontario Transportation Plan, 2020 was developed to serve as a guide to help build a modern and sustainable transportation system for people in Northern Ontario. It contains actions that will connect communities, provide safer and more reliable travel and unlock economic potential in the region. This plan is a living document and will be updated with actions to reflect the evolving needs of the region.

The Project is aligned with the objectives of this Plan and will support the goal of achieving sustainable development for Northern Ontario.

6.6.3 Fisheries Management Plan

The Fisheries Management Plan as administered by Ministry of Natural Resources and Forestry (MNRF) is designed to highlight and protect the value of the diversity of lakes and to be flexible and adaptable to a wide range of future conditions. The planning process considers the lake in a holistic manner and includes a range of management options to secure a healthy lake environment that conserves the diversity of the fish community and provide opportunities to contribute to the social and economic well-being of the surrounding area. Each specific zone outlines restrictions and guidelines for sport and conservation activities as it relates to fishing to verify sustainability of the region's aquatic life. No specific fisheries management plans have been approved for FMZ 1 – 3 (MNRF, 2023h).

6.7 Land Use Plans and Policies

A number of remote fly-in and winter road access First Nation communities, have been (or are currently) undertaking community land use planning, which considers the remote nature of these communities. Where information is available, the following section describes community-based land use planning, on-reserve land use planning and other planning processes. It is noted that most communities do not publicly share their community plans, and currently, information is limited on such communities that have not provided information for the Socio-Economic Baseline for the Project.

Many First Nation communities have developed CBLUPs, which outlines land ownership, land access, and traditional uses of the land.

DRAFT

The following statement is provided in the Webequie Draft CBLUP (Webequie Draft CBLUP, 2019):

> *"Dialogue has been ongoing between Webequie and Neskantaga regarding shared uses and planning interests between the two communities. Community members of Webequie and Neskantaga share close family connections and common history of movement and traditional use in the area between the two communities. Neskantaga First Nation has an ongoing traditional use connection to the southern portion of the proposed Webequie planning area; in the Chipai, Fishbasket and Wapitodem River areas, south and east of Winisk Lake, the upper Winiskisis Channel, and the upper portions of the Ekwan and Attawapiskat River drainage areas that fall within the proposed planning area. Webequie First Nation honours and respects Neskantaga First Nation Indigenous use connections in the proposed planning area.*
>
> *At the Draft Plan stage, in order to respect the ongoing Three-Nation discussions between Webequie, Marten Falls and Neskantaga, Webequie First Nation has chosen not to advance planning direction for a portion of the proposed planning area. Dialogue regarding the area will be ongoing between the Draft and Final Plan (Webeqiue Draft CBLUP, 2019)."*

Little information is publicly available about Neskantaga First Nation documented plans for land use (if any exist); however, as information becomes available through dialogue with the community, with permission from the community, information will be considered as part of the EA/IA.

6.8 Industrial Land Use

The economy of Northern Ontario relies heavily on resource extraction, with the mining, aggregate and forestry industries significant factors in land use planning in the region. The Ring of Fire, a significant mineral development region has long term potential to contribute to the Ontario economy (Ministry of Mines, 2022). These contributions include creating more jobs, generating revenue, building infrastructure, and bringing prosperity to communities to the north, including First Nation communities. Minerals found in the Ring of Fire to date include chromite, copper, zinc, gold, diamond, nickel and platinum group elements (Ministry of Mines, 2022).

In April 2023, leaders from 10 Treaty No. 9 First Nations from announced a lawsuit against the Ontario and Canadian governments that could fundamentally change decision-making authority in the Treaty No. 9 territory (CBC News, 2023). The First Nations leading the lawsuit intend to establish co-jurisdiction in the Treaty No. 9 territory that would require consent of Indigenous Nations' way of life impacted by resource development.

The draft statement of claim mentions the objectives of Indigenous Signatories to the Treaty included "to preserve bimaadiziwin in Ojibwe or pimaatisiium in Cree – happiness, prosperity, and protection of their traditional way of life" (APTN News, 2023). Mino-Bimaadiziwin translates to "into living a complete, healthy, and good life" which represents an Indigenous philosophy for a way of living (Thomas, 2020). Some of the key principles of Mino-Bimaadiziwin are to maintain a sacred relationship with all elements of creation including, trees, fish, birds, animals, water, plants, people, and everything else provided by the Creator, and to live in harmony and coexistence. Mino-Bimaadiziwin and other Indigenous laws represent Indigenous identity, outlining the roles, duties, and obligations of being a member of an Indigenous Nation (Thomas, 2020).

Ontario established the Critical Minerals Strategy in 2021, which is a comprehensive five-year plan to secure the province's position as a reliable global supplier of responsibly sourced critical minerals (Ministry of Natural Resources and Forestry, 2022h). Critical minerals are those with industrial, technological or strategic applications for which there are few viable substitutions and are currently at a higher supply risk due to geopolitical considerations and market demand (Ontario Mines Association, 2022). The success of the Critical Minerals Strategy is dependent on six components, referred to as the six pillars in the strategy, which include:

1. Enhancing geoscience information and supporting critical mining exploration;

DRAFT

2. Growing domestic processing and creating resilient local supply chains;
3. Improving Ontario's regulatory framework;
4. Investing in innovation, research and development;
5. Building economic development opportunities with Indigenous partners; and
6. Growing labour supply and developing a skilled labour force.

Mining activity is a large driver of the regional economy (see Section 5). Mining is regulated under the provisions of the provincial *Mining Act*. The purpose of the *Mining Act* is to "encourage prospecting, online mining claim registration and exploration for the development of mineral resources, in a manner consistent with the recognition and affirmation of existing Aboriginal and Treaty Rights in Section 35 of the *Constitution Act*, *1982*, including the duty to consult, and to minimize the impact of these activities on public health and safety and the environment" (Ministry of Mines, 2023). Registering a new mining claim and managing an existing mining claim, is done online through the Mining Lands Administrative System (MLAS). Applicants are required to create a MLAS user account, which allows them to view active unpatented mining claims, register new mining claims, manage user mining claims, and buy or renew a prospector's license. Non-registered users are only able to use the MLAS map viewer to view active unpatented mining claims.

Under Section 50 of the *Mining Act*, a Mining Claim provides exclusive rights for the claim holder to explore for minerals and rights to enter, use and occupy surface rights as necessary for exploration and development. A mining claim does not provide mining rights for the land to the holder of the claim. Someone that holds a prospector license may stake out a mining claim on land that is open for staking and prospect for minerals on any Crown land, including land traditionally used by Indigenous Peoples and communities (Natural Resources Canada, 2013).

The Government of Ontario is working directly with First Nations through bilateral agreements that support each individual First Nation community's needs and priorities (Ministry of Mines, 2022). Proposed all season road projects in the Ring of Fire area are led by First Nation communities, which include project planning through EA/IAs, and maximizing benefits and opportunities for First Nations communities.

According to Ontario, building economic development opportunities with Indigenous partners is critical to the success of the strategy as collaboration on resource development projects can help in reconciliation with Indigenous Peoples and communities and provide Socio-Economic benefits to Indigenous communities. To demonstrate Ontario's commitment to reconciliation and support economic development opportunities to build healthy and prosperous communities across Ontario's north, a resource revenue sharing agreement with Indigenous communities was developed (Ministry of Mines, 2022). This agreement allows Indigenous communities to share in the economic benefits of forestry and mining operations near their communities. This revenue can be used for economic development, education, health, community development, and cultural development. There are currently 35 Indigenous communities involved in the revenue resource sharing agreement with Ontario, including communities represented by Grand Council Treaty #3, Mushkegowuk Council, and Wabun Tribal Council. The Aboriginal Participation Fund provides $4.7M annually to support communities' participating in consultation, education and relationship building activities related to mineral exploration and development (Ontario Mining Association, 2022).

Aggregates include sand, gravel and bedrock that are typically used in construction projects. Aggregate resources are regulated under the Aggregate Resources Act. Aggregate extraction on Crown land requires an Aggregate Permit and on private land it requires an Aggregate License if it is within an Aggregate Designated Area (Ministry of Natural Resources and Forestry, 2022a).

There is no information on industrial land use specific to Neskantaga First Nation.

DRAFT

6.9 Commercial Use, Outdoor Recreation and Tourism

Commercial use, outdoor recreation and tourism are important economic activities for a number of Indigenous communities'. Commercial use includes any activity or business that uses the resources from the land to provide income, such as commercial fishing, hunting and trapping. As fishing, hunting, trapping, and gathering wild plants has been a way of living for Indigenous Peoples across Canada for a millennia, many Indigenous communities rely on these traditional activities as their source of income (Kumar et al., 2019). According to the Indigenous Tourism Association of Canada, recreation and outdoor activities (which includes outfitters, hunting, fishing, and wilderness guides, as well as various types of recreational and adventure camps, including recreational vehicle parks and campgrounds) are an important domain in the Indigenous tourism sector (Fiser and Hermus, 2019). In the 2018 census survey completed by the Indigenous Tourism Association of Canada, Ontario generated the second highest revenue in direct GDP, among all provinces and territories in Canada, from recreation and outdoor activities (Fiser and Hermus, 2019). Tourism is an important aspect as it provides an opportunity for visitors to learn about the history, experience, arts, and culture of Indigenous communities.

Recreational activities in the Indigenous communities involve community-based sports and activities organized by the community administration or other groups such as schools. Recreation facilities typically include baseball diamonds, gym/community centres, hockey arenas, playgrounds, playing fields and other facilities. Youth and community events are hosted by communities.

Neskantaga First Nation received funding from the federal government to upgrade their existing arena and community centre. Change rooms will be added, new insulation and expansion of an accessible gym (Kaufman 2021).

6.10 Provincial Parks, Areas of Natural and Scientific Interest and Protected Areas

There are no federal, provincial, or regional/municipal protected parks and protected areas which overlap with the Project Footprint and Neskantaga First Nation.

Provincial Parks

- Albany River Provincial Park

The Albany River Provincial Park was established in 1989, starting at Lake St. Joseph at Highway 599 and traversing downriver, approximately 300 km to approximately 30 km west of Marten Falls. The Albany River is a key waterway for travel for Anishinaabemowin/Anishinaabe/Mushkegowuk communities. First Nation members have cabins and camps which they use for harvesting and hunting within their traditional territory.

- Otoskwin/Attawapiskat River Provincial Park

The Otoskwin/Attawapiskat River Provincial Park is approximately 82,529 ha in size, most of the area is water. The park is located within the traditional territories of Neskantaga, Marten Falls, Eabametoong, Mishkeegogamang and Attawapiskat First Nations. The area features several historical sites with significance to Indigenous communities dating back to 3,000 BC. The Otoskwin-Attawapiskat River Provincial Park Management Plan specifies the objectives being to provide opportunities for recreational uses that are compatible with the area's remote nature (Ontario Parks, 2002). A preliminary survey of the archaeological resources of the Attawapiskat Lake area has identified over 30 sites and First Nations have placed a high priority on the protection of cultural sites (Ontario Parks, 2002). This park does not feature facilities for visitors but activities such as white-water paddling, canoe and kayaking, back country camping, fishing, hunting and snowmobiling are supported within the park (Ontario Parks, 2023b).

DRAFT

- Winisk River Provincial Park

In 1966, the growing demand for tourism led to provincial government setting aside the “Winisk Wild River Indian Guide Territory” and established the Winisk River Provincial Park over Winisk Lake and Winisk River in 1968 (Ministry of the Environment Conservation and Parks, 2021a). This move, however, intersected with Indigenous Nations exercise of their inherent rights to traditional lands, water usage, and the pursuit of economic and community development goals. The Winisk River Provincial Park is located to the north of the Webequie First Nation Reserve, approximately 2.17 km from WSR. The parkland is approximately 141,000 ha in size and boasts unique landforms including a large moraine and drumlin fields. The only access to the park is by canoe, air or by float plane park (Ministry of Natural Resources, 1991). This park does not feature facilities for visitors but activities such as white-water paddling, canoe and kayaking, back country camping, fishing, hunting and snowmobiling are supported within the park (Ontario Parks, 2022). Five outpost camps are located along the Winisk River System to support fishing and hunting tourism. The Winisk River Provincial Park Interim Management Plan, 1991 provides direction for the management of the park (Ministry of Natural Resources, 1991). Additional tourism development will only be permitted once the management plan is complete (Ministry of Natural Resources, 1991).

ANSI

There are no ANSIs or Candidate ANSIs which intersect the Project Footprint or Neskantaga Reserve.

Conservation Reserve

There are no conservation reserves which intersect with the Project Footprint or Neskantaga Reserve.

SUPPLY ROAD

February 09, 2024

Chief Christopher Moonias
Neskantaga First Nation
P.O. Box 105
Landsdowne House, ON
P0T 1Z0

Re: Preliminary draft Neskantaga First Nation Community Existing Conditions Summary
Webequie Supply Road Project
Environmental Assessment / Impact Assessment

Dear Chief Moonias,

We hope that this finds you and your community well.

As you know, Webequie First Nation is the proponent of the Webequie Supply Road Project (WSR, or 'the Project'), a proposed 107 km all-season road that will facilitate the movement of materials and people from the Webequie Airport to the mineral deposit area near McFaulds Lake.

An Environmental Assessment (EA) under the Ontario *Environmental Assessment Act* and an Impact Assessment (IA) under the federal *Impact Assessment Act* is being conducted to identify and assess how the Project may affect the natural environment as well as the health, socio-economic, cultural well-being, and the Aboriginal and Treaty rights and interests of communities. At this time the Project Team is working toward completing the preliminary draft Socio-Economic Existing Conditions Report, that will be used to draft the effects assessment of the Project, which will be captured in the EA and IA.

The Project Team led by the Webequie First Nation is striving to gather as much Anishinaabemowin/Anishinaabe/Mushkegowuk Indigenous Knowledge as it relates to the Project and to help inform the socio-economic existing conditions.

This letter is to request your review of the draft Community-Specific Existing Conditions Summary document, which is based on the data and information collected for the Socio-Economic Existing Conditions Report of the EA/IA and presents the preliminary findings specifically collected for Neskantaga First Nation. The document summarizes information gathered through publicly available online resources and information gathered with communities, through interviews, focus groups and surveys, if the community participated in the Socio-Economic Primary Data Collection Program. The community-specific baseline information provided in the document is arranged as follows:

- **Community Setting** – including community overview, history, values and aspirations;
- **Population and Demographics** – including population, age, gender, indigenous identity, mobility and migration, etc.;

- **Housing and Accommodations** – including housing demand/ affordability/ supply/ quality and number of people living in a home;
- **Social Services and Infrastructure** – including supply and demand for education, childcare, healthcare, water, waste, energy, and communications;
- **Transportation** – including volume of, and demand for, road and air transportation;
- **Community Well-Being and Safety** – including social cohesion and culture, participation in social and/or cultural events, safety such as levels of domestic violence, assault, and nuisance such as air quality and noise concerns;
- **Regional and Local Economy** – including economic and procurement opportunities, labour force and employment, government finances, cost of living, and mining/aggregate activity;
- **Traditional Indigenous land and resource use** – including sites and areas used for traditional activities, and culturally and spiritually important sites and areas;
- **Land Use Compatibility** – including existing and proposed land uses;
- **Recreation and Tourism** – including land/waterway access and resource availability; and
- **Provincial Parks and Protected Areas** – including areas of natural and scientific interest and conservation reserves.

We want to prepare a holistic and comprehensive overview of information for Neskantaga First Nation and would much appreciate to hear back from you on this document as our team is always open to working with you for further improvement on the content.

We hope you and your community are safe and well and look forward to hearing from you.

Sincerely,

Michael Fox
Regional Consultation Lead
Webequie Supply Road

c.c. Chief Cornelius Wabasse, Webequie First Nation
Heather Swan, Deputy Project Manager, Webequie Supply Road

Chief Christopher Moonias
Neskantaga First Nation
P.O. Box 105
Landsdowne House, ON
P0T 1Z0

Dear Chief Moonias,

We would like to bring up several activities related to the Webequie Supply Road (WSR) Project that will be of interest to your community.

Consultation Progress Report Round 2

On January 29, 2024, the WSR Project Team sent a package via Canada Post to your community containing the Consultation Progress Report (hard copy and USB), which summarizes and documents Round 2 of the Engagement and Consultation Program with Indigenous communities on the Project. As of today, February 15, 2024, the package status indicates that it has been delivered to your community on February 1, 2024.

The Consultation Progress Report 2 is provided as per the requirements of the Terms of Reference (ToR) for the provincial EA process and specifically the Ministry of the Environment, Conservation and Parks (MECP) ToR Notice of Approval that requires the proponent to provide Consultation Progress Reports to Indigenous communities at three key milestones throughout the EA/IA process. The Consultation Progress Report 1 for Consultation Round 1 was submitted to Indigenous communities and the MECP in October 2022. In the MECP approval letter with the ToR Notice of Approval, dated October 8, 2021, the Ministry acknowledged “the concerns expressed by several Indigenous communities about the consultation process for the ToR, about their role, and input in the EA process for the proposed Project going forward, impacts on Aboriginal and Treaty Rights, and about Ontario’s obligations and efforts to meet the duty to consult.” For more information on the Minister’s approval, go to https://www.ontario.ca/page/webequie-supply-road-project.

The Consultation Progress Report 2 provides an overview of engagement activities in Consultation Round 2, as well as community-specific summaries of engagement and community feedback and input provided by community members. The Consultation Progress Report 2 also incorporated comments from MECP during the review of the Consultation Progress Report 1. Consultation Round 2 of the Engagement and Consultation Program occurred from March 2023 to November 2023. Key milestones and topics covered in this round of consultation included:

- Summary of input received from Consultation Round 1

- Overview of results of baseline studies to characterize existing conditions within the study area;
- Identification and evaluation of “alternatives to” the Project and “alternative methods” of carrying out the Project;
- Criteria and indicators used for the evaluation of alternative methods (e.g., routes, construction camps and aggregate source areas) arranged under factors (e.g., natural environment, technical considerations, Indigenous land use and interests);
- Preliminary recommended preferred route and locations for supportive infrastructure (aggregate/rock source areas, construction camps, access roads) from multifactor analysis including rationale for selection;
- Preliminary engineering design elements of WSR (bridges, culverts, road design; and
- Next steps and schedule.

We welcome any feedback and input your community may have on the Consultation Progress Report 2, so that issues or concerns can be addressed in the EA/IA process for the Project and during Consultation Round 3. Should your community have any questions or comments on the Consultation Progress Report 2, please feel free to contact me at 807-472-6147 or michael.fox@supplyroad.ca.

Livestream and Radio Show Series

The WSR Project Team will be resuming the live streaming and radio call-in shows next week. The topic of the upcoming session is: **WSR Presents: Construction Camps and Other Project Opportunities.**

The livestreaming event is scheduled for **February 20th, 2024 at 12:00pm (EST)** which is accessible on the WSR Project website: https://www.supplyroad.ca/stream/. We encourage you and your community members to listen, for this will give your community members the opportunity to ask questions. You may call or text with questions during the live stream at 1-844-424-0500 or email your questions to mckenna@indigenousengagement.ca.

In addition, the WSR phone-in radio show will be broadcasted through **Wawatay News** on the same day as the above livestreaming event at **2:00pm (EST).** You may also call, text, or email questions to the same toll-free number and email provided above.

To help create awareness, facilitate postings, and increase participation for the WSR's engagement options for your community members, the WSR Project Team is attaching a WSR poster so that your staff can post it on your community website, community Facebook page, and other in- community locations where hardcopy notifications, job postings, and advertisements are typically posted. If printing is an issue, let us know if you need hardcopies of the WSR poster and we can mail them to your community for local distribution.

Engagement Opportunities

As the Webequie Supply Road (WSR) Project is currently in the Environmental Assessment/Impact Assessment (EA/IA) phase, the WSR Project Team is requesting to meet

with you and your team to discuss the WSR EA/IA process, provide project updates, and seek input and feedback to help inform the EA/IA. We are available to meet and discuss the EA/IA in detail at your convenience, and in any method that you and your community prefers.
